APPENDICES

APPENDIX A

EXECUTIVE SUMMARY TABLE

TABLE ES-1
SUMMARY OF IMPACTS AND MITIGATION MEASURES

Impact	Mitigation Measures	Original Impact/Residual Impact with Mitigation				
		Alternative A1	Alternative A2	Alternative A3	Alternative B	Alternative C
SECTION 3.2. Geology and Soils						
Site Topography – The project alternatives could result in changes to site topography from grading activities.	No mitigation required.	LS	LS	LS	LS	NI
Soils and Geology – Development could impact soils and thus cause soil erosion during construction. Construction activities such as clearing, grading, trenching, and backfilling could reduce the integrity of the soil structures, which would thereby increase the likelihood of erosion from wind and/or stormwater runoff.	The following measure is recommended for Alternatives A1, A2, and B. **MM 1-A** - The project shall comply with the NPDES Construction General Permit from the USEPA for construction site runoff during the construction phase in compliance with the CWA. A SWPPP shall be prepared, implemented, and maintained throughout the construction phase of the development, consistent with Construction General Permit requirements. The SWPPP shall detail the BMPs to be implemented during construction and post-construction operation of the selected project alternative to reduce impacts related to soil erosion and water quality. The mitigation measures shall include, but are not limited to, the following. 1. Existing vegetation shall be retained where practicable. To the extent feasible, grading activities shall be limited to the immediate area required for construction. 2. Temporary erosion control measures (such as silt fences, fiber rolls, vegetated swales, a velocity dissipation structure, staked straw bales, temporary re-vegetation, rock bag dams, erosion control blankets, and sediment traps) shall be employed for disturbed areas. 3. To the maximum extent feasible, no disturbed surfaces shall be left without erosion control measures in place. 4. Construction activities shall be scheduled to minimize land disturbance during peak runoff periods. Soil conservation practices shall be completed during the fall or late winter to reduce erosion during spring runoff. 5. Creating construction zones and grading only one area or part of a construction zone at a time shall minimize exposed areas. If practicable during the wet season, grading on a particular zone shall be delayed until protective cover is restored on the previously graded zone. 6. Disturbed areas shall be re-vegetated following construction activities. 7. Construction area entrances and exits shall be stabilized with large-diameter rock.	PS/LS	PS/LS	LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	8. Sediment shall be retained onsite by a system of sediment basins, traps, or other appropriate measures. 9. Petroleum products shall be stored, handled, used, and disposed of properly in accordance with provisions of the CWA [33 U.S. Code (USC) 1251 to 1387]. 10. Construction materials, including topsoil and chemicals, shall be stored, covered, and isolated to prevent runoff losses and contamination of surface and groundwater. 11. Fuel and vehicle maintenance areas shall be established away from all drainage courses and designed to control runoff. 12. Sanitary facilities shall be provided for construction workers. 13. Disposal facilities shall be provided for soil wastes, including excess asphalt during construction and demolition. 14. Other potential BMPs include use of wheel wash or rumble strips and sweeping of paved surfaces to remove any and all tracked soil. **MM 1-B** - Contractors involved in the project shall be trained on the potential environmental damage resulting from soil erosion prior to construction in a pre-construction meeting. Copies of the project's SWPPP shall be made available at that time. Construction bid packages, contracts, plans, and specifications shall contain language that requires adherence to the SWPPP.					
Seismicity – Construction near an active fault zone could yield adverse effects associated with seismic activity.	No mitigation required.	LS	LS	LS	LS	NI
Mineral Resources – Construction and operation could affect known or recorded mineral resources.	No mitigation required.	LS	LS	LS	LS	NI
Cumulative Geology and Soils Impacts – Development of the project alternatives could, when taken together with other foreseeable developments, result in significant topographic changes and/or soil loss.	No mitigation required.	LS	LS	LS	LS	NI
SECTION 3.3. Water Resources						
Floodplain – Development within a floodplain could generate adverse effects related to inundation.	No mitigation required.	LS	LS	LS	LS	NI
Surface Water						
1) Construction Impacts – Ground-disturbing activities such as grading and excavation could lead to erosion of topsoil.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B.**	PS/LS	PS/LS	NI	PS/LS	NI
2) Stormwater Runoff – The project alternatives could alter the existing	No mitigation required.	LS	LS	LS	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	drainage pattern of the Mettler Site and increase stormwater runoff as a result of increased impervious surfaces.						
Groundwater							
1)	**Groundwater Supply** – The project alternatives could result in the drawdown of groundwater aquifers.	The following measures are recommended for Alternatives A1, A2, and B. **MM 2-H** To fully offset groundwater extraction associated with the selected project alternative, one or more of the following measures shall be implemented by the Tribe prior to operation. a. Amend the existing surface water contract for agricultural irrigation water with the appropriate water district (Arvin-Edison Water Storage District for the Mettler Site or Wheeler Ridge-Maricopa Water Storage District for the Maricopa Highway Site) to allow the transfer of surface water to other agricultural lands within the Kern County Subbasin that currently uses groundwater for irrigation. As a condition of the agreement, the agricultural land receiving the surface water would be required to reduce groundwater pumping by at least the same amount as the surface water they are receiving. b. Implement a groundwater recharge project, such as constructing a basin to recharge water from the selected property's existing surface water contract. c. Work with and compensate the County or local water district to implement a water conservation program and/or a conjunctive water use program. The program shall (1) assess existing and potential sources of reclaimed wastewater within Kern County Subbasin, and determine potential points of use for the reclaimed wastewater, and/or (2) supplement the County's or local water district's existing water conservation programs to identify and implement additional conservation measures within Kern County Subbasin.	S/LS	S/LS	LS	S/LS	NI
2)	**Groundwater Recharge** – The project alternatives could impact groundwater recharge through the development of impervious surfaces.	No mitigation required.	LS	LS	LS	LS	NI
3)	**Neighboring Groundwater Wells –** The project alternatives could impact neighboring groundwater wells.	The following measures are recommended for Alternatives A1, A2, and B. **MM 2-E** Prior to construction of the on-site wells, the USEPA shall be consulted in the early stages of establishing the well system. Furthermore, baseline monitoring of the groundwater shall be submitted to the USEPA prior to public water usage. **MM 2-F** The on-site wells shall be positioned as to avoid to the maximum extent possible adverse effects on the established wells and surface water features within a 1-mile radius of the project site while optimizing groundwater usage onsite, such as avoiding the	LS/LS	LS/LS	LS	LS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

		percolation pond's cone of influence. A groundwater study shall be conducted in order to achieve this objective.					
4)	**Groundwater Quality** – The use of potentially hazardous construction materials may spill onto the ground and enter stormwater. Additionally the operation of a WWTP onsite that percolates treated effluent could impact groundwater quality.	The following measures are recommended for Alternatives A1, A2, and B. **MM 2-A** Wastewater shall be fully treated to at least a tertiary level using MBR or SBR technology. The Tribe shall apply for and obtain applicable permits and approvals prior to operation. **MM 2-B** The on-site WWTP shall be staffed with operators who are qualified to operate the plant safely, effectively, and in compliance with all permit requirements and regulations. The operators shall have qualifications similar to those required by the Operator Certification Program for municipal WWTPs. **MM 2-C** Water shall be treated onsite to USEPA standards prior to reuse or discharge into percolation ponds. Percolation ponds and reuse facilities shall be closely monitored by a responsible engineer. Periodic monitoring of the wastewater facility shall ensure the wastewater system is operating safely and efficiently. **MM 2-D** Groundwater sampling and analysis shall be performed regularly and all drinking water shall be treated to the SDWA standards. **MM 2-G** To avoid potential adverse influences on the on-site potable water supply, potable water transmission pipes shall not be located within the percolation pond's cone of influence.	PS/LS	PS/LS	LS	PS/LS	NI
Cumulative Water Resources Impacts							
1)	**Surface Water and Flooding** – Development of the project alternatives in conjunction with other proposed developments could significantly increase sedimentation, pollution, and stormwater runoff.	No mitigation required.	LS	LS	LS	LS	NI
2)	**Surface Water Quality** – The project alternatives, taken together with other foreseeable developments, could result in an increase in pollution and sedimentation.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A and MM 1-B.**	PS/LS	PS/LS	LS	PS/LS	NI
3)	**Groundwater** – The project alternatives, in conjunction with the buildout of County and/or City General Plans, could significantly impact groundwater supply if the total water demand exceeds the rate of groundwater recharge.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 2-A** through **MM 2-H.**	PS/LS	PS/LS	LS	PS/LS	NI
SECTION 3.4. Air Quality							
Construction Emissions – Construction activities could adversely affect air quality		No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

through the emission of PM_{10}, NO_x, SO_2, CO, ROG, GHGs, and HAPs (primarily in the form of DPM).						
Operational Vehicle and Area Emissions – Project alternatives could adversely affect air quality through the emission of criteria pollutants from vehicles and project facilities.	The following measure is recommended for Alternatives A1, A2, and B. **MM 3-A** - The Tribe shall purchase 112.74 tons of NOx ERCs and 18.52 tons of ROG ERCs for Alternative A1, as specified in the Draft General Conformity Determination included in **Appendix N**. Alternative A2 would require the purchase of 96.93 tons of NOx ERCs and 12.28 tons of ROG ERCs. Alternative B would require the purchase of 111.32 tons of NOx ERCs and 15.60 tons of ROG ERCs. Because the air quality effects are associated with operation of the facility and not with construction of the facility, real, surplus, permanent, quantifiable, and enforceable, ERCs shall be purchased prior to the opening day of the facility. ERCs shall be purchased in accordance with the 40 CFR 93 Subpart B, conformity regulations. With the purchase of the ERCs the project would conform to the applicable SIP and result in a less-than-adverse effect to regional air quality. As an alternative to or in combination with purchasing the above ERCs, the Tribe has the option to enter into a VERA with the SJVAPCD. The VERA would allow the Tribe to fund air quality projects that quantifiably and permanently offset project operational emissions.	PS/LS	PS/LS	NI	PS/LS	NI
Cumulative Air Quality Impacts						
1) Operational Emissions – Development of the project alternatives, in conjunction with other regional projects, could contribute to the nonattainment of NAAQS.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 3-A**.	PS/LS	PS/LS	NI	PS/LS	NI
2) Carbon Monoxide Hot Spot Analysis – Development of the project alternatives, taken together with the buildout of the City and/or County General Plans, could cause an increase in delay at some intersections in the cumulative year 2040 sufficient to warrant a Hot Spot Analysis.	No mitigation required.	LS	LS	NI	LS	NI
3) Climate Change – Development of the project alternatives in conjunction with other foreseeable projects could significantly contribute to climate change through the emission of GHGs.	No mitigation required.	LS	LS	NI	LS	NI
SECTION 3.5. Biological Resources						
Potential Effects to Habitats – Development of project alternatives could disturb federally designated critical or sensitive habitats.	No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

Potential Effects to Special-Status Species – The following special-status species could be impacted by the project alternatives:							
1)	San Joaquin Kit Fox (SJKF)	The following mitigation measures are recommended for Alternatives A1, A2, and B. **MM 4-A** - Potential dens shall be visibly marked by a qualified biologist into an exclusion zone with a 100-foot buffer. No staging of materials or equipment, construction personnel, or other construction activity shall occur within the setback areas. The avoidance buffer shall be maintained until either the completion of construction, or the proper destruction of the den as described below. The USFWS guidelines for SJKF avoidance and minimization shall be followed. **MM 4-B** - A qualified biologist shall conduct a pre-construction survey to assess potential presence of SJKF 2 calendar weeks to 30 calendar days prior to commencement of ground disturbance. A report summarizing the findings of the survey shall be sent to the USFWS within 5 days of completion of any pre-construction surveys. If the construction activities stop on the site for a period of 5 days or more, then an additional pre-construction survey shall be conducted no more than 48 hours prior to the start of construction. If no SJKF or potential dens are found during the preconstruction survey, no further action is required regarding this species. **MM 4-C** - If any SJKF potential dens are identified on the project site during the pre-construction survey or during construction activities (potential dens are defined as burrows at least 4 inches in diameter which open up within 2 feet), the USFWS shall be notified immediately and no construction activity shall occur within 100 feet of the potential den. An exclusionary zone shall be implemented as described in Measure A. Potential den entrances shall be monitored with trail cameras for 3 consecutive days, or dusted for 3 consecutive days to register track of any SJKF present. If no SJKF activity is identified, potential dens may be destroyed by careful excavation followed by immediate filling and compacting of the soil. If SJKF activity is identified, a buffer zone of 250 feet shall be maintained around the den until the biologist determines that the den has been vacated. The den shall be considered vacant when 3 days of den entrance dusting or trail camera monitoring results in no SJKF sign, at which point only a 100-foot buffer becomes necessary. Should destruction of such a vacated natal den be necessary, USFWS shall be contacted, and the appropriate take permit issued. Where SJKF are identified, the provisions of the USFWS's published *Standardized Recommendations for Protection of the San Joaquin Kit Fox Prior to or During Ground Disturbance (2010)* shall apply for den destruction and ongoing operational recommendations. **MM 4-D** - A qualified biologist shall conduct habitat sensitivity training related to SJKF for project contractors and shall monitor construction during initial grading activities within the project site. Under this program, workers shall be informed about the presence of SJKF and	PS/LS	PS/LS	LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

		habitat associated with the species and that unlawful take of the animal or destruction of its habitat is not permitted. Prior to construction activities, a qualified biologist shall instruct and distribute informational materials to construction personnel about: (1) the life history of the SJKF; (2) the importance of habitat requirements for SJKF; (3) sensitive areas including those identified onsite; and (4) the importance of maintaining the required setbacks and detailing the limits of the construction area. Documentation of this training shall be maintained onsite. **MM 4-E** - The standards of the USFWS publication include provisions for educating construction workers regarding the SJKF, keeping heavy equipment operating at safe speeds, checking construction pipes for SJKF occupation during construction and similar activities.					
2)	Blunt Nosed Leopard Lizard (BLL)	The following mitigation measures are recommended for Alternatives A1, A2, and B. **MM 4-F** - A pre-construction survey for BLL shall be performed by a qualified biologist within 30 days prior to construction activities to establish the presence of species on this site. The survey shall occur during the months of April through October to avoid surveying during peak hibernation months when BLL are inactive. Should BLL be observed, the USFWS shall be contacted to determine appropriate removal or avoidance measures. The survey methods shall be consistent with CDFW's Approved Survey Methodology for the BLL. **MM 4-G** - Access gates shall remain closed during periods of inactivity and have at least a 6-inch curtain in contact with the soil surface anchored by hay bales and sand bags. A designated individual shall check for BLL under vehicles and equipment such as stored pipes before the start of the work day. If a BLL is discovered, the vehicle or equipment shall not be moved until the animal has exited on its own. Pipes and other den-like structures should be capped at both ends until just before use to prevent potentially occurring BLL from being trapped. **MM 4-H** - Prior to construction activities, a qualified biologist shall instruct and distribute informational materials to construction personnel about BLL, including life history information, habitat requirements, and appropriate response to potential observations. The qualified biologist shall monitor construction during initial grading activities. Documentation of this training shall be maintained onsite. **MM 4-I** - Should BLL or other listed federal species be detected within the construction footprint at any point during construction or monitoring, grading activities shall halt, and the USFWS shall be consulted. No grading activities shall commence until USFWS authorizes the re-initiation of grading activities.	PS/LS	PS/LS	LS	PS/LS	NI
3)	Tipton Kangaroo Rat and Giant Kangaroo Rat	The following mitigation measures are recommended for Alternatives A1 and A2 for the Tipton kangaroo rat, and Alternative B for the Tipton kangaroo rat and giant kangaroo rat. **MM 4-J** - A pre-construction survey for Tipton/giant kangaroo rat presence shall be conducted between 2 weeks and 30 calendar days	PS/LS	PS/LS	LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

		before the start of ground-disturbing activities. A qualified biologist shall survey for Tipton/giant kangaroo rat signs, such as scat, burrows, tail drag marks, and tracks. Should a confirmed observation of a Tipton/giant kangaroo rat occur, the USFWS service shall be contacted to determine if relocation procedures are necessary. Presence of Tipton/giant kangaroo rat shall be assumed if any positive sign for any Tipton/giant kangaroo rat is observed due to the difficulty of species-level identification without live trapping. **MM 4-K** - Should an active burrow be observed onsite, a 50-foot buffer shall be marked around the burrow entrance by the qualified biologist with high-visibility fencing. Should the active burrow be within the project footprint, USFWS shall be contacted to determine the appropriate removal or avoidance measures. **MM 4-L** - Prior to construction activities, a qualified biologist shall instruct and distribute informational materials to construction personnel about Tipton/giant kangaroo rat including life history information, habitat requirements, and appropriate response to potential observations. The qualified biologist shall monitor construction during initial grading activities. Documentation of this training shall be maintained onsite.					
4)	Burrowing Owl	The following mitigation measures are recommended for Alternatives A1 and A2. **MM 4-M** - A qualified biologist shall conduct a pre-construction survey for burrowing owls within the 30 days prior to construction activities to establish the status of this species on the site. If ground-disturbing activities are delayed or suspended for more than 30 days after the pre-construction survey, the site shall be resurveyed. If burrowing owls are detected on or within approximately 500 feet of the site, a qualified biologist shall be consulted to develop measures to avoid "take" of this species prior to the initiation of any construction activities. Burrows observed onsite shall additionally be treated as potential burrowing owls dens and shall be handled as outlined in mitigation measures for burrowing owls. These measures include establishing appropriate buffers, and may require additional monitoring by a qualified biologist before destruction if burrowing owls are observed during pre-construction surveys. **MM 4-N** - Prior to construction activities, a qualified biologist shall instruct and distribute informational materials to construction personnel about: (1) the life history of the burrowing owl; (2) the importance of habitat requirements; (3) sensitive areas including those identified on site, and (4) the importance of maintaining the required setbacks and detailing the limits of the construction area. Documentation of this training shall be maintained on site.	PS/LS	PS/LS	LS	PS/LS	NI
Potential Effects to Migratory Birds and Other Birds of Prey – Active nests could be disturbed if construction occurred during the nesting season; lighting could increase		The following mitigation measures are recommended for Alternatives A1, A2, and B. **MM 4-O** - Should ground-disturbing activities occur during the general nesting season (February 1 to September 15), a pre-construction nesting bird survey shall be conducted by a qualified biologist no more	PS/LS	PS/LS	LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

collisions of birds with structures or cause avian disorientation.	than 14 days prior to the start of ground-disturbing activities. Areas within 500 feet of ground-disturbing activities shall be surveyed for active nests. **MM 4-P** - Should an active nest be identified, an avoidance buffer shall be established based on the needs of the species identified and pursuant to consultation with CDFW and/or USFWS if necessary prior to initiation of ground-disturbing activities. Avoidance buffers may vary in size depending on habitat characteristics, project-related activities, and disturbance levels. Avoidance buffers shall remain in place until the end of the general nesting season or upon determination by a qualified biologist that young have fledged or the nest has failed.					
Potential Effects to Wetlands and Waters of the U.S. – Construction could impact wetlands within project site and improvement area boundaries.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B.**	PS/LS	PS/LS	NI	PS/LS	NI
Cumulative Biological Resources Impacts						
1) Potential Effects to Habitat – The project alternatives, in conjunction with other foreseeable developments, could adversely impact critical or sensitive habitat.	No mitigation required.	LS	LS	LS	LS	NI
2) Potential Effects to Special-Status Species – Development of the project alternatives, taken together with the buildout of the City and County General Plans, could adversely impact special-status species.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 4-A** through **MM 4-N.**	PS/LS	PS/LS	LS	PS/LS	NI
3) Potential Effects to Migratory Birds and Other Birds of Prey – The project alternatives, taken together with the development of other foreseeable projects, could disturb migratory birds.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 4-O** through **MM 4-P.**	PS/LS	PS/LS	LS	PS/LS	NI
4) Potential Effects to Wetlands and/or Waters of the U.S. – The project alternatives and other foreseeable developments could adversely impact wetlands and/or water of the U.S. by increasing erosion or through the discharge of runoff or wastewater.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B.**	PS/LS	PS/LS	NI	PS/LS	NI
SECTION 3.6. Cultural and Paleontological Resources						
Buried Resources – Ground-disturbing activities could uncover and/or damage archaeological sites.	The following measure is recommended for Alternatives A1, A2, A3, and B. **MM 5-A** - A qualified professional archaeologist shall complete pre-construction surveys of the off-site impact areas, documenting and assessing any resources encountered. If the find is determined to be significant by the archaeologist, then an appropriate course of	PS/LS	PS/LS	PS/LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	action shall be implemented prior to construction in the vicinity of the find. Possible actions may include recordation, archaeological testing/data recovery, development of a Treatment Plan, or other measures. All significant archaeological materials recovered shall be subject to scientific analysis, professional curation as appropriate, and documentation prepared by the archaeologist according to current professional standards. **MM 5-B** - In the event of inadvertent discovery of prehistoric or historic archaeological resources during construction-related earth-moving activities, all work within 50 feet of the find shall cease until a professional archaeologist meeting the Secretary of the Interior's qualifications (36 CFR 61) can assess the significance of the find. The BIA and Tribe shall be notified immediately, and all such finds shall be subject to procedures for post-review discoveries without prior planning pursuant to 36 CFR 800.13. If the find is determined to be significant by the archaeologist, BIA and/or Tribe, then the process in mitigation measure A shall be followed. **MM 5-C** - In the event of inadvertent discovery of paleontological resources during construction earth-moving activities, all work within 50 feet of the find shall cease until a qualified professional paleontologist can assess the significance of the find, and the BIA shall be notified. All such finds shall be subject to Section 101 (b)(4) of NEPA (40 CFR 1500 1508). If the find is determined to be significant by the paleontologist, then representatives of the BIA shall meet with the paleontologist to determine the appropriate course of action, including the development of an Evaluation Report and/or Mitigation Plan, if necessary. All significant paleontological materials recovered shall be subject to scientific analysis, professional curation, and a report prepared by the professional paleontologist according to current professional standards. **MM 5-D** - If human remains are discovered during ground-disturbing activities on Tribal lands, all work within 100 feet of the find shall cease immediately and the Tribe, BIA, and County Coroner shall be notified immediately. No further disturbance shall occur until the Tribe, BIA, and County Coroner have made the necessary findings as to the origin and disposition of the remains. If the remains are determined to be of Native American origin, the provisions of Native American Graves Protection and Repatriation Act shall be applied.					
Paleontological Resources – Paleontological resources could be uncovered and/or damaged by ground-disturbing activities.	The following measure is recommended for Alternatives A1, A2, A3, and B. Implement **MM 5-A** through **MM 5-D.**	PS/LS	PS/LS	PS/LS	PS/LS	NI
Cumulative Cultural Resources Impacts – Construction activities, in conjunction with the development of other foreseeable projects, could disturb archaeological or paleontological resources.	The following measure is recommended for Alternatives A1, A2, A3, and B. Implement **MM 5-A** through **MM 5-D.**	PS/LS	PS/LS	PS/LS	PS/LS	NI
SECTION 3.7. Socioeconomic Conditions						

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

Economic Effects							
1)	**Construction** – Construction of the project alternatives could impact spending and labor demand in the region.	No mitigation required.	BI	BI	LS	BI	NI
2)	**Operation** – Operation of the project alternatives could impact spending and labor demand in the region.	No mitigation required.	BI	BI	LS	BI	NI
3)	**Substitution Effects**						
a)	**Gaming Market Substitution Effects** – Operation of the project alternatives could reduce revenues at existing tribal casinos.	No mitigation required.	LS	LS	NI	LS	NI
b)	**Non-Gaming Substitution Effects** – Operation of the project alternatives could reduce revenues at existing hotels, restaurants, and retail facilities.	No mitigation required.	BI	BI	NI	BI	NI
4)	**Fiscal Effects** – The project alternatives could adversely impact County and/or City tax revenues and operating budgets.	No mitigation required.	BI	BI	LS	BI	NI
Employment							
1)	**Construction** – Construction of the project alternatives could impact wages, job availability, and/or employment rates.	No mitigation required.	BI	BI	LS	BI	NI
2)	**Operation** – Operation of the project alternatives could impact wages, job availability, and/or employment rates.	No mitigation required.	BI	BI	LS	BI	NI
Housing – Employment-driven in-migration could cause or exacerbate housing supply issues.		No mitigation required.	LS	LS	LS	LS	NI
Social Effects – The following social impacts could result from operation of the project alternatives:							
1)	**Problem and Pathological Gambling** – Operation of the project alternatives could increase the prevalence of problem or pathological gaming.	No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

2) Crime – Operation of the project alternatives could increase the incidence of crime in the region.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 9-A**.	PS/LS	PS/LS	NI	PS/LS	NI
Community Effects – Impacts to the following areas could result from development of the project alternatives:						
1) Schools – Employment-driven in-migration could introduce a number of new students in excess of the regional enrollment capacity.	No mitigation required.	LS	LS	LS	LS	NI
2) Libraries and Parks – Employment-driven in-migration could overburden existing recreational facilities.	No mitigation required.	LS	LS	LS	LS	NI
Effects to the Tejon Indian Tribe	No mitigation required.	BI	BI	BI	BI	NI
Environmental Justice – There are some identified minority and low-income populations in the vicinity of the alternative sites that could be affected.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 7-A** through **MM 7-H** and **MM 3-A.**	PS/LS	PS/LS	LS	PS/LS	NI
Cumulative Socioeconomic Impacts – The project alternatives, taken together with the buildout of the City and County General Plans, could yield adverse impacts to the local labor market, housing availability, and local governments.						
1) Economy and Employment	No mitigation required.	BI	BI	LS	BI	NI
2) Population and Housing	No mitigation required.	LS	LS	LS	LS	NI
3) Substitution Effects	No mitigation required.	LS	LS	LS	LS	NI
SECTION 3.8. Transportation/ Circulation						
Construction Traffic – Vehicle trips associated with project construction could negatively impact roadways and significantly increase traffic volume.	No mitigation required.	LS	LS	LS	LS	NI
Project Traffic – Vehicle trips associated with the operation of the project alternatives could significantly increase traffic volume and exceed the designed capacity of regional roadways.	The following measures are recommended for Alternatives A1 and A2. **MM 7-A** - Stevens Drive/Maricopa Highway Intersection: install a traffic signal and provide an exclusive WB left-turn lane on Maricopa Highway at Stevens Drive, or install a roundabout, based on the recommendations of an ICE study, with an associated fair-share contribution of 100 percent for Alternatives A1 and A2. **MM 7-B** - Maricopa Highway/South Sabodan Street: install a traffic signal with an associated fair-share contribution of 100% for Alternatives A1 and A2 and the following geometry. **SB** – Construct the north leg of the intersection and provide one left-turn lane and one right-turn lane in the SB direction and one NB lane.	S/LS	S/LS	LS	S/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	WB – One left-turn lane, one through lane, and one right-turn lane. **EB** – One left-turn lane, one through lane, and one shared through/right lane. **NB** – One left-turn lane and one shared through/right lane. Alternatively, install a roundabout, based on the recommendations of an ICE study. The following measures are recommended for Alternative B. **MM 7-F** - Stevens Drive/Maricopa Highway Intersection: install a traffic signal and provide an exclusive WB left-turn lane on Maricopa Highway at Stevens Drive, or install a roundabout, based on the recommendations of an ICE study, with an associated fair-share contribution of 100% for Alternative B **MM 7-G** - Maricopa Highway/I-5 SB Ramps Intersection: install an exclusive WB left-turn lane on Maricopa Highway and a traffic signal, or a roundabout with or without a loop ramp, based on the recommendations of an ICE study, with an associated fair-share contribution of 100 percent for Alternative B. **MM 7-H** - Maricopa Highway/I-5 NB Ramps Intersection: install an exclusive EB left-turn lane on Maricopa Highway and a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study, with an associated fair-share contribution of 100 percent for Alternative B.					
Roadway Conditions -- Traffic generated by the project alternatives could cause the degradation of roadway pavement.	The following measures are recommended for Alternative B. **MM 7-I** - Maricopa Highway Segment: The Tribe shall make an offer of dedication to Caltrans for 23 feet of right-of-way needed to accommodate the ultimate configuration of SR-166, as described in the May 2016 Transportation Concept Report for SR-166.	LS	LS	LS	PS/LS	NI
Transit, Bicycle, and Pedestrian Facilities -- Traffic generated by the project alternatives could adversely impact other transportation facilities.	No mitigation required.	NI	NI	NI	NI	NI
Cumulative Transportation/Circulation Impacts (Year 2040) – Development of the project alternatives in conjunction with other development projects could adversely impact traffic flow, roadway quality, and transportation facilities.	The following measures are recommended for Alternatives A1 and A2. Implement **MM 7-A** and **MM 7-B**. **MM 7-C** - Maricopa Highway/I-5 SB Ramps Intersection: contribute a fair share of 14 percent for Alternative A1 and 13 percent for Alternative A2 towards providing an exclusive WB left-turn lane on Maricopa Highway and installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study. **MM 7-D** - Maricopa Highway/I-5 NB Ramps Intersection: contribute a fair share of 26 percent for Alternative A1 and 24 percent for Alternative A2 towards providing an exclusive EB left-turn lane on Maricopa Highway and installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.	S/LS	S/LS	LS	S/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	MM 7-E - SR-166 to NB I-5 Ramp Merge: contribute a fair share of 52 percent for Alternative A1 and 48 percent for Alternative A2 towards providing a 1,000-foot auxiliary lane on I-5 NB mainline at the merge. The following measures are recommended for Alternative B. Implement **MM 7-F** through **MM 7-H.**					
SECTION 3.9. Land Use						
Land Use Plans – The project alternatives could conflict with County land use plans and ordinances (applicable to non-trust property).	No mitigation required.	LS	LS	LS	LS	NI
Land Use Compatibility – The project alternatives could conflict with neighboring land uses.	No mitigation required.	LS	LS	LS	LS	NI
Agriculture – The project alternatives could conflict with state and federal farmland designations.	No mitigation required.	LS	LS	LS	LS	NI
Cumulative Land Use Impacts – Development of the project alternatives in conjunction with other development projects could disrupt or impede access to neighboring land uses.	No mitigation required.	LS	LS	LS	LS	NI
SECTION 3.10. Public Services						
Water Supply – The project alternatives could exceed the capacity of the municipal water supply or require significant improvements to the existing municipal water distribution infrastructure.	No mitigation required.	NI	NI	NI	NI	NI
Wastewater Service – Operation of the project alternatives could exceed the capacity of the existing municipal wastewater treatment and disposal infrastructure.	No mitigation required.	NI	NI	NI	NI	NI
Solid Waste Service						
1) Construction – Construction of the project alternatives could generate quantities or types of waste that cannot be accommodated by regional waste disposal facilities.	No mitigation required.	LS	LS	NI	LS	NI
2) Operation - Operation of the project alternatives could generate quantities or types of waste that cannot be accommodated by regional waste disposal facilities.	No mitigation required.	LS	LS	LS	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

Law Enforcement – Service calls to local law enforcement agencies could increase due to the project alternatives.		The following mitigation measure is recommended for Alternatives A1, A2, and B. **MM 9-A** - Prior to operation, the Tribe shall enter into agreements to reimburse the KCSD, KCFD, and county emergency medical services for quantifiable costs incurred in conjunction with providing services.	PS/LS	PS/LS	LS	PS/LS	NI
Fire Protection and Emergency Medical Services							NI
1)	**Construction** – Construction activities could increase the risk of fire.	No mitigation required.	LS	LS	LS	LS	NI
2)	**Operation** – The project alternatives could increase the number of service calls to local fire protection/emergency medical service providers.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 9-A**.	PS/LS	PS/LS	LS	PS/LS	NI
Energy							
1)	**Construction** – Construction activities could damage underground utilities.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 9-A**.	PS/LS	PS/LS	LS	PS/LS	NI
2)	**Operation** – Operation of the project alternatives could necessitate improvements to electrical and natural gas infrastructure that generate adverse environmental effects.	The following mitigation measures are recommended for Alternatives A1, A2, and B. Implement **MM 9-A**. **Public Services MM E** - The Tribe shall be responsible for a fair share of costs associated with any relocation of existing SoCalGas and PG&E facilities to accommodate the proposed development and traffic improvements. Appropriate funds shall be made available to conduct any necessary relocation and to construct any system upgrades required by the project.	PS/LS	PS/LS	LS	PS/LS	NI
Schools, Libraries, and Parks – Operation of the project alternatives could adversely impact schools, libraries, and parks.		No mitigation required.	LS	LS	LS	LS	NI
Cumulative Public Services Impacts							
1)	**Water Supply** – Development of the project alternatives, taken together with other foreseeable developments, could adversely impact the provision of water	No mitigation required.	NI	NI	NI	NI	NI
2)	**Wastewater** – Development of the project alternatives in conjunction with the buildout of the City and County General Plans could adversely impact the treatment and disposal of wastewater.	No mitigation required.	NI	NI	NI	NI	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

1)	**Solid Waste** – The project alternatives, taken together with other foreseeable developments, could adversely impact the disposal of solid waste.	No mitigation required.	LS	LS	LS	LS	NI
2)	**Law Enforcement** – Development of the project alternatives and other foreseeable projects could adversely impact the provision of law enforcement services.	No mitigation required.	LS	LS	LS	LS	NI
3)	**Fire Protection and Emergency Medical Services** – Operation of the project alternatives, taken together with other foreseeable development projects, could impede the provision of fire protection and emergency medical services.	No mitigation required.	LS	LS	LS	LS	NI
4)	**Energy** – Development of the project alternatives, in conjunction with the buildout of the City and County General Plans, could adversely impact the provision of electrical and natural gas services and the physical environment.t	No mitigation required.	LS	LS	LS	LS	NI
5)	**Schools, Libraries, and Parks --** Operation of the project alternatives could adversely impact schools, libraries, and parks.	No mitigation required	LS	LS	LS	LS	NI
SECTION 3.11. Noise							
Construction Noise– Noise associated with construction activities could adversely affect human health and/or the physical environment.		No mitigation required.	LS	LS	NI	LS	NI
Construction Traffic - Construction of the project alternatives could increase traffic-related noise in the vicinity of roads surrounding the project sites, with the exception of the roads analyzed separately below:		No mitigation required.	LS	LS	NI	LS	NI
Construction Vibration – Vibration associated with construction activities could adversely affect human health and/or the physical environment.		No mitigation required.	LS	LS	NI	LS	NI
Operational Noise							
1)	**Traffic** – Operation of the project alternatives could increase traffic-	No mitigation required.	LS	LS	LS	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	related noise in the vicinity of roads surrounding the project sites.						
2)	**Other Noise Sources**– Vibration and other noise sources associated with the project alternatives could contribute to a significant increase in noise levels.	No mitigation required.	LS	LS	LS	LS	NI
3)	**Vibration -** Vibration associated with the operation of the alternatives could adversely affect human health and/or the physical environment.	No mitigation required.	LS	LS	LS	LS	NI
Cumulative Noise Impacts - Development of the project alternatives, in combination with other foreseeable projects, could contribute toward a significant increase in noise levels.		No mitigation required.	LS	LS	LS	LS	NI
SECTION 3.12. Hazardous Materials							
Construction – Construction of the project alternatives could disturb existing hazardous materials or introduce new hazardous materials into the environment.		The following measures are recommended for Alternatives A1, A2, and B. **MM 11-A** - Workers and supervisors should be trained in Valley Fever locations, symptoms, and methods to minimize the risks of contracting Valley Fever before commencing work. This includes a "Valley Fever Training Handout," and a set schedule of educational sessions. The following documentation shall be assembled and retained by the Tribe. 1. A sign-in sheet of training participants, including names, signatures, and dates. 2. A written flyer or brochure that includes educational information on the health effects of exposure to Valley Fever. 3. Training on methods that may be able to prevent Valley Fever Infection. 4. A demonstration to employees on how to use personal projective equipment, such as respiratory masks, in order to reduce potential exposure to *C. immitis* spores. This protective equipment should be readily available for employees to use during work hours. Proof of this training can consist of printed materials, DVD, photographs, and/or digital media files. **MM 11-B** - The Tribe shall develop a Valley Fever Dust Management Plan that addresses possible *C. immitis* spores and mitigations for potential infections from *C. immitis* spores. The plan should encompass a program to assess the possible exposure to *C. immitis* spores from construction activities and to outline appropriate safety precautions that will be implemented, as appropriate, to reduce the risk of exposure to spores from *C. immitis*. The plan shall include of the following. 1. When performing soil-disturbing related tasks, workers shall be positioned upwind or crosswind when possible.	PS/LS	PS/LS	PS/LS	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	2. Heavy equipment, vehicles and machinery with factory enclosed cabs shall be furnished with HEPA filters when able and the windows should be closed. Furthermore, proof of workers being trained on the proper use of applicable heavy equipment cabs shall be retained (e.g., turning on the air conditioner before using equipment). 3. Communication methods within enclosed cabs shall be provided, such as two-way radios. 4. When dust exposure is unavoidable, workers shall wear approved respiration protection that covers the nose and mouth. The particulate filters should be rated at N95, N99, N100, or HEPA. 5. Separate, clean areas with hand-washing stations shall be provided for employees to eat at. 6. Equipment inspection stations shall be installed at access/egress points. At these stations, construction vehicles and equipment shall be inspected and cleaned of excess soil material as needed before being removed offsite. 7. Workers shall be trained on how to recognize Valley Fever symptoms and report symptoms surmised as being Valley Fever to a supervisor when encountered. 8. A medical professional shall be consulted in order to develop a medical protocol for evaluating employees with suspected Valley Fever. 9. An information handout concerning Valley Fever shall be disseminated to the public within a 3.0-mile radius of the project and no less than 30 days before the commencement of construction activities. The handout shall address the following topics about Valley Fever: potential sources and causes, common symptoms, options or remedies available if an individual should experience symptoms, and the locations of where tests are available for verifying Valley Fever.					
Operation – Operation of the project alternatives could introduce hazardous materials into the physical environment.	Applicable measures from **MM 11-A** and **11-B** shall be implemented for Alternative A3.	LS	LS	PS/LS	LS	LS
Cumulative Hazardous Materials Impacts – Development of the project alternatives, in combination with other foreseeable projects, could disturb existing hazardous materials or introduce new hazardous materials to the physical environment.	No mitigation required.	LS	LS	LS	LS	LS
SECTION 3.13. Aesthetics						
Construction– Construction activities could obstruct views of scenic resources.	No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

Operation – Development of the project alternatives could generate significant adverse aesthetic impacts.	No mitigation required.	LS	LS	NI	LS	NI
Effects on Viewsheds Surrounding the Project – Development of the project alternatives could alter the viewsheds surrounding the site.	No mitigation required.	LS	LS	NI	LS	NI
Light and Glare – Development of the project alternatives could cause visually undesirable and potentially dangerous glares on private residences or public areas.	No mitigation required.	LS	LS	NI	LS	NI
Cumulative Aesthetics Impacts – The project alternatives, in combination with other foreseeable alternatives, could be visually incompatible with existing land uses or otherwise adversely impact aesthetic resources.	No mitigation required.	LS	LS	NI	LS	NI
SECTION 3.14. Indirect and Growth-Inducing Effects						
SECTION 3.14.1. Indirect Effects from Off-Site Mitigation Improvements						
Geology and Soils – Construction of roadway improvements could increase the potential for soil erosion and geological hazards.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Water Resources – Construction of roadway improvements could increase stormwater runoff and erosion and adversely impact water quality.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Air Quality – Construction of roadway improvements could adversely impact air quality through the emission of air pollutants.	No mitigation required.	LS	LS	NI	LS	NI
Biological Resources – Habitat could be lost and special-status species could be disturbed due to the construction of roadway improvements.	The following mitigation measure is recommended for Alternatives A1, A2, and B. Implement **MM 4-A** through **MM 4-P**.	PS/LS	PS/LS	NI	PS/LS	NI
Cultural Resources – Construction of roadway improvements has the potential to disturb archaeological resources.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 5-A** through **MM 5-D**.	PS/LS	PS/LS	NI	PS/LS	NI
Socioeconomic Conditions – Roadway improvements could cause disturbances in traffic flow and/or the loss of access to businesses and communities.	No mitigation required.	LS	LS	NI	LS	NI
Transportation/Circulation – Roadway improvements could disrupt traffic flow and/or access to surrounding land uses.	No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

Land Use – Roadway improvements could conflict with City or County planning ordinances or adversely impact adjacent property owners.	No mitigation required.	LS	LS	NI	LS	NI
Public Services – Roadway improvements could significantly disrupt the provision of public services.	No mitigation required.	LS	LS	NI	LS	NI
Noise – Construction of the roadway improvements could result in significant increases in ambient noise levels.	No mitigation required.	LS	LS	NI	LS	NI
Hazardous Materials – Hazardous materials could be released inadvertently and dry vegetation could be ignited during grading and construction activities.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 11-A** and **MM 11-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Aesthetics – Roadway improvements could significantly alter viewsheds.	No mitigation required.	LS	LS	NI	LS	NI
SECTION 3.14.2. Growth-Inducing Effects – Development of the project alternatives could promote population growth and/or the construction of additional housing, which could adversely impact the physical and human environments.						
Employment and Commercial Growth – Development of the project alternatives could promote population growth and/or the construction of additional housing, which could adversely impact the physical and human environments.		LS	LS	NI	LS	NI
Geology and Soils – Construction of potential future developments on the site could increase the potential for soil erosion and geological hazards.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Water Resources – Construction of potential future developments on the site could increase stormwater runoff and erosion and adversely impact water quality.	The following measure is recommended for Alternatives A1, A2, and B. Implement **MM 1-A** and **MM 1-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Air Quality – Construction of potential future developments on the site could adversely impact air quality through the emission of air pollutants.	The following measures are recommended for Alternatives A1 and A2. **MM 3-B** - Prior to operation of the potential future development on the Mettler or Maricopa Highway Sites as described in **Table 3.14-2**, the Tribe shall purchase 11.42 tons of NOx ERCs and 10.03 tons of ROG ERCs for Alternative A1, as specified in the Draft General Conformity Determination included in **Appendix N**. Alternative A2 would require the purchase of 12.16 tons of NOx ERCs and 10.09 tons of ROG ERCs. Because the air quality effects are associated with operation of the facility and not with construction of the facility, real, surplus, permanent, quantifiable, and enforceable ERCs will be purchased prior to the opening day of the facility. ERCs shall be purchased in accordance with 40 CFR 93 Subpart B conformity regulations. With the purchase of the ERCs, the project would conform to the applicable	PS/LS	PS/LS	NI	PS/LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

	SIP and result in a less-than-adverse effect to regional air quality. As an alternative to or in combination with purchasing the above ERCs, the Tribe has the option to enter into a VERA with the SJVAPCD. The VERA would allow the Tribe to fund air quality projects that quantifiably and permanently offset project operational emissions.					
Biological Resources – Habitat could be lost and special-status species could be disturbed due to the construction of potential future developments on the site.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 4-A** through **MM 4-P**.	PS/LS	PS/LS	NI	PS/LS	NI
Cultural Resources – Construction of potential future developments on the site has the potential to disturb archaeological resources.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 5-A** through **MM 5-D**.	PS/LS	PS/LS	NI	PS/LS	NI
Socioeconomic Conditions – Potential future developments on the site could cause disturbances in traffic flow and/or the loss of access to businesses and communities.	No mitigation required.	LS	LS	NI	LS	NI
Transportation/Circulation – Potential future developments on the site could disrupt traffic flow and/or access to surrounding land uses.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 7-A** through **MM 7-H**.	PS/LS	PS/LS	NI	PS/LS	NI
Land Use – Potential future developments on the site could conflict with City or County planning ordinances or adversely impact adjacent property owners.	No mitigation required.	LS	LS	NI	LS	NI
Public Services – Potential future developments on the site could significantly disrupt the provision of public services.	No mitigation required.	LS	LS	NI	LS	NI
Noise – Construction of the potential future developments on the site could result in significant increases in ambient noise levels.	No mitigation required.	LS	LS	NI	LS	NI
Hazardous Materials – Hazardous materials could be released inadvertently and dry vegetation could be ignited during grading and construction activities.	The following measures are recommended for Alternatives A1, A2, and B. Implement **MM 11-A** and **MM 11-B**.	PS/LS	PS/LS	NI	PS/LS	NI
Aesthetics – Potential future developments on the site could significantly alter viewsheds.	No mitigation required.	LS	LS	NI	LS	NI

(Legend: NI = No Impact; BI = Beneficial Impact; LS = Less-than-Significant; PS = Potentially Significant; S = Significant)

APPENDIX B

ALTERNATIVES ELIMINATED FROM CONSIDERATION

ALTERNATIVES ELIMINATED FROM CONSIDERATION

The intent of the analysis of alternatives in the EIS is to present to decision-makers and the public a reasonable range of alternatives that are both feasible and sufficiently different from each other in critical aspects. Section 1502.14(a) of the CEQ's Regulations for implementing NEPA requires a brief discussion of alternatives that were eliminated from further study and the reasons for their having been eliminated. Alternatives, other than the No Action Alternative, were screened based on four criteria: 1) extent to which they meet the purpose and need for the Proposed Action, 2) feasibility, 3) ability to reduce environmental impacts, and 4) ability to contribute to a reasonable range of alternatives. Several alternatives were considered and rejected for full EIS analysis based on the above criteria. These are summarized below:

NON-GAMING DEVELOPMENT FOR EACH OF THE ALTERNATIVE LOCATIONS WITHIN THE TRIBE'S TRADITIONAL TERRITORY

This alternative was suggested by a commenter during the public scoping period. The Mettler and Maricopa Highway sites are both located within the central portion of the Historic 1851 Tejon Treaty Area and are considered Alternatives A and B within the EIS. A non-gaming alternative was analyzed for the Mettler Site (Alternative A3. A non-gaming alternative for the Maricopa Highway Site was analyzed but eliminated from consideration because non-gaming development on the site would not result in significant economic benefits to the Tribe. Additionally, due to the current zoning and land uses of the Maricopa Highway site, development of a non-gaming alternative would result in environmental impacts similar to the gaming alternatives presented in the EIS, and socioeconomic impacts would be similar to the gaming alternatives presented in the EIS. Therefore, analyzing a non-gaming alternative at the Maricopa Site would not meaningfully add to the range of alternatives, and would not meet the purpose and need of the project.

GAMING DEVELOPMENT ALTERNATIVES THAT DO NOT INCLUDE APPROVAL OF A GAMING MANAGEMENT AGREEMENT BY THE NIGC

For each alternative which includes a casino, the gaming activity may either be managed directly by employees of the Tribe or by a management contractor pursuant to a gaming management agreement approved by the NIGC. Under either form of management of the casino, the environmental impacts of the development of the casino for each alternative are the same. Therefore, analyzing gaming development alternatives that do not include approval of a gaming management agreement by the NIGC would not meaningfully add to the range of alternatives and such alternatives were eliminated.

FUTURE EXPANSION ALTERNATIVE

This alternative was suggested by a commenter during the public scoping period. This alternative would include future expansion plans of the proposed casino resort beyond what is being currently proposed by the Tribe. The respective sizes of the proposed alternatives described above were determined based on a market demand analysis; therefore, a casino resort larger than those proposed would not be feasible. Furthermore, there are no known plans for future expansion, and thus, this alternative was eliminated from consideration.

TEJON INDUSTRIAL COMPLEX SITE

The Tejon Industrial Complex Site is south of the Outlets at Tejon at the junction of I-5 and South Wheeler Ridge Road. Gaming and non-gaming options were considered for this site; however, this alternative site was eliminated from consideration due to the lack of a willing seller of the required real estate under viable terms and conditions.

TAFT HIGHWAY SITE

The Taft Highway Site is northeast of the I-5 and SR-119 intersection. A casino resort development similar to Alternative A1 was considered on this site; however, as the Taft Highway Site is not located within the Tribe's Historic 1851 Tejon Treaty Area and due to financial viability considerations, this site was eliminated from further consideration.

APPENDIX C

OFF-RESERVATION CHECKLIST

OFF-RESERVATION ENVIRONMENTAL IMPACT ANALYSIS CHECKLIST

I. AESTHETICS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage off-reservation scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) Create a new source of substantial light or glare, which would adversely affect day or nighttime views of historic buildings or views in the area?	☐	☐	☒	☐

II. AGRICULTURAL RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Involve changes in the existing environment, which, due to their location or nature, could result in conversion of off-reservation farmland, to non-agricultural use or conversion of off-reservation forest land to non-forest use?	☐	☐	☒	☐

III. AIR QUALITY

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☒	☐	☐
b) Violate any air quality standard or contribute to an existing or projected air quality violation?	☐	☒	☐	☐
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?	☐	☒	☐	☐

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
d) Expose off-reservation sensitive receptors to substantial pollutant concentrations?	☐	☒	☐	☐
e) Create objectionable odors affecting a substantial number of people off-reservation?	☐	☐	☒	☐

IV. BIOLOGICAL RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Have a substantial adverse impact, either directly or through habitat modifications, on any species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any off-reservation riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
c) Have a substantial adverse effect on federally protected off-Reservation wetlands as defined by Section 404 of the Clean Water Act?	☐	☒	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

V. CULTURAL RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Cause a substantial adverse change in the significance of an off-reservation historical or archaeological resource?	☐	☒	☐	☐
b) Directly or indirectly destroy a unique off-reservation paleontological resource or site or unique off-reservation geologic feature?	☐	☒	☐	☐
c) Disturb any off-reservation human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

VI. GEOLOGY AND SOILS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Expose off-reservation people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial off-reservation soil erosion or the loss of topsoil?	☐	☒	☐	☐

VII. GREENHOUSE GAS EMISSIONS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the off-reservation environment?	☐	☐	☒	☐

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
b) Conflict with any off-reservation plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

VIII. HAZARDS AND HAZARDOUS MATERIALS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Create a significant hazard to the off-reservation public or the off-reservation environment through the routine transport, use, or disposal of hazardous materials?	☐	☒	☐	☐
b) Create a significant hazard to the off-reservation public or the off-reservation environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed off-reservation school?	☐	☐	☒	☐
d) Expose off-reservation people or structures to a significant risk of loss, injury, or death involving wildland fires.	☐	☐	☒	☐

IX. WATER RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Violate any water quality standards or waste discharge requirements off-Reservation?	☐	☐	☒	☐

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
b) Substantially deplete off-reservation groundwater supplies or interfere substantially with groundwater recharge such that there should be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion of siltation off-site?	☐	☐	☒	☐
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding off-site?	☐	☐	☒	☐
e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff off-reservation?	☐	☐	☒	☐
f) Place structures within a 100-year flood hazard area, which would impede or redirect off-Reservation flood flows?	☐	☐	☒	☐
g) Expose off-reservation people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☒	☐

X. LAND USE

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Conflict with any off-reservation land use plan, policy, or regulation of an agency adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐
b) Conflict with any applicable habitat conservation plan or natural community conservation plan covering off-reservation lands?	☐	☐	☒	☐

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*

XI. MINERAL RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Result in the loss of availability of a known off-reservation mineral resource classified MRZ-2 by the State Geologist that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of an off-Reservation locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

XII. NOISE

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Expose persons off-reservation to noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Expose persons off-reservation to excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) Result in a substantial permanent increase in ambient noise levels in the off-reservation vicinity of the project?	☐	☐	☒	☐
c) Result in a substantial temporary or periodic increase in ambient noise levels in the off-reservation vicinity of the project?	☐	☐	☒	☐

XIII. POPULATION AND HOUSING

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Induce substantial off-reservation population growth?	☐	☐	☒	☐
b) Displace substantial numbers of existing houses, necessitating the construction of replacement housing elsewhere off-reservation?	☐	☐	☒	☐

XIV. PUBLIC SERVICES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered off-reservation governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the off-reservation public services:				
Fire protection?	☐	☒	☐	☐
Police protection?	☐	☒	☐	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☒	☐

XV. RECREATION

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Increase the use of existing off-reservation neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐

XVI. TRANSPORTATION / TRAFFIC

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the off-reservation circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including, but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☒	☐	☐
b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated off-reservation roads or highways?	☐	☒	☐	☐
c) Substantially increase hazards to an off-reservation design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access for off-reservation responders?	☐	☐	☒	☐

XVII. TRIBAL CULTURAL RESOURCES

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historic resources as defined in Public Resources Code Section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section	☐	☒	☐	☐

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resources to a California Native American tribe.				

XVIII. UTILITIES AND SERVICE SYSTEMS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Exceed off-reservation wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☐	☒
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant off-reservation environmental effects?	☐	☒	☐	☐
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant off-reservation environmental effects?	☐	☐	☐	☒
d) Result in a determination by an off-reservation wastewater treatment provider (if applicable), which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒

XIX. CUMULATIVE EFFECTS

Would the Proposed Project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Have impacts that are individually limited, but cumulatively considerable off-reservation? "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past, current, or probable future projects.	☐	☒	☐	☐

APPENDIX D

INTERGOVERNMENTAL AGREEMENT

Kern County
Agt.# 475-2019

INTERGOVERNMENTAL AGREEMENT

This Intergovernmental Agreement (this "Agreement") is made effective as of July 23, 2019, by and between the County of Kern (the "County"), a political subdivision of the State of California, and the Tejon Indian Tribe (the "Tribe"), a federally recognized Indian tribe. The capitalized terms not otherwise defined herein shall have the meanings set forth below.

RECITALS

WHEREAS, the Tribe is without a reservation or other trust land on which to develop its tribal economy, housing, healthcare, and other services; and

WHEREAS, in 2016 the Tribe and the County entered into a separate Memorandum of Understanding for the provision of services to 10.3 acres of real property at 4941 David Road if that property is placed into trust (Kern County Agreement #1118-2016, referred to herein as the "David Road Agreement"); and

WHEREAS, the Tribe has requested that the Secretary of the United States Department of the Interior accept title to certain Property located within an unincorporated area of the County in trust for the Tribe, a portion of which would be used for the development of a tribal resort, hotel and gaming project to promote tribal economic development, self-sufficiency, and self-government; and

WHEREAS, the Secretary has authorized the Bureau of Indian Affairs to prepare an environmental impact statement, or EIS, to consider a range of alternative project developments and sites within the Tribe's aboriginal territory to meet the purposes and needs for the Trust Acquisition and the conduct of gaming; and

WHEREAS, the County and Tribe are participating as cooperating agencies in the preparation of the EIS with the opportunity to review and comment on administrative drafts prior to the release of each of the draft and final EIS to the public; and

WHEREAS, the Tribe will be required to implement the mitigation measures identified in the final EIS pursuant to the Record of Decision for the Trust Acquisition; and

WHEREAS, the Tribe does not intend to make any physical changes to the environment on the sites being considered in the EIS prior to approval of the Trust Acquisition and the Tribe has not requested the County to issue and the County does not commit itself to issue any discretionary approval of any kind under this Agreement; and

WHEREAS, the primary purpose of this Agreement is to provide a funding mechanism for the Tribe to compensate the County for law enforcement, fire protection, and emergency services, to provide reasonable compensation for programs designed to

treat problem gambling, to mitigate any effect on public safety attributable to the Project, and to mitigate all other impacts of the Project on the County; and

WHEREAS, if the Secretary takes the Property in trust for the Tribe, the County will not have the legal authority to assess real property taxes against the newly acquired trust land or to collect taxes or other assessments from the Tribe or to extend its regulatory authority over the Property; and

WHEREAS, the County has determined after public hearing that it is in the best interests of the County to enter into this Agreement; and

WHEREAS, after taking into account the provisions of this Agreement, the Tribe's commitment to mitigate any potentially significant environmental impacts identified in the EIS, the potential job creation, and the other economic benefits of the Project to the Tribe and the community, the County has determined that the development, construction, and operation of the Project would not be detrimental to the County and the surrounding community; and

WHEREAS, the County and the Tribe wish to enter into this Agreement to build upon their cooperative and mutually respectful government-to-government relationship.

NOW, THEREFORE, the Parties hereby agree as follows:

1. Definitions

The terms not defined elsewhere in this Agreement shall have the following meanings:

"Agreement" means this Intergovernmental Agreement between the County and the Tribe.

"Applicable Codes" means the California Building Code and the California Public Safety Code applicable to the County, as set forth in titles 19 and 24 of the California Code of Regulations, as those regulations may be amended, including, but not limited to, codes for building, electrical, energy, mechanical, plumbing, fire and safety.

"Bureau of Indian Affairs" means the Bureau of Indian Affairs of the United States Department of the Interior.

"CEQA" means the California Environmental Quality Act (California Public Resources Code §§ 21000 *et seq.*) and the guidelines promulgated thereunder, as the same may be amended or modified from time to time.

"Construction Date" means, after the Trust Acquisition, the later of the date the Tribe closes a loan to obtain funding from a financial institution to finance construction of the Gaming Facility or commences vertical construction of the Gaming Facility.

"County" means the County of Kern, California, a political subdivision of the State, and its departments, agencies and subdivisions, including, but not limited to, the Sheriff and Sheriff's Office and the County Fire Department.

"County Administrative Office" means a department of the County responsible for executing and coordinating County administrative and financial policy.

"CPI Adjustment" means an annual increase from the dollar amount applicable to the previous year that is equal to the annual increase in the Consumer Price Index used by the Kern County Assessor's Office, as provided in the California State Board of Equalization's annual California Consumer Price Index letter to County Assessors.

"EIS" means the environmental impact statement for the Project and Trust Acquisition being prepared by the Bureau of Indian Affairs as the lead federal agency under authority delegated by the Secretary pursuant to NEPA.

"Gaming Facility" means any building on the Property in which class III gaming authorized under the Tribal-State Compact occurs.

"IGRA" means the Indian Gaming Regulatory Act of 1988 (25 U.S.C. §§ 2701 *et seq.*) and the regulations promulgated thereunder, as the same may be amended or modified from time to time.

"Joint Substation" has the meaning given in Subsection 2(a) of this Agreement.

"NEPA" means the National Environmental Policy Act (42 U.S.C. §§ 4321 *et seq.*) and the regulations promulgated thereunder, as the same may be amended or modified from time to time.

"Opening Date" means the date on which the Tribe commences commercial operations open to the public on the Property.

"Party" means the County or the Tribe.

"Parties" means the County and the Tribe.

"Project" means the development, construction and operation of all uses on the Property, including the Gaming Facility.

"Property" means the approximately 306 acres of fee land located within the unincorporated area of the County identified in the notice to prepare an EIS for the proposed Trust Acquisition published on August 13, 2015 in the Federal Register (80

Fed. Reg. 48559) as described and shown on Attachment A or such other property that is identified in the Record of Decision as the preferred alternative for the Trust Acquisition.

"Public Entity" means any federal, State, regional or local governmental entity, public authority, public agency, public corporation or any subdivision thereof, including, without limitation, the County.

"Public Law 280" refers to the statute that extended state criminal jurisdiction and limited, non-regulatory civil jurisdiction to Indian country in certain states, including California, pursuant to Public Law 280, 67 Stat. 588 (1953), as amended, 18 U.S.C. §§ 1161-62, 25 U.S.C. §§ 1321-22, 28 U.S.C. § 1360 (1953).

"Record of Decision" means the final document issued for the Project and Trust Acquisition by the Bureau of Indian Affairs following issuance of the final EIS pursuant to NEPA which sets forth the preferred alternative for the proposed action and identifies and adopts mitigation measures to minimize or avoid environmental harm from the preferred alternative.

"Secretary" means the Secretary of the United States Department of the Interior or her or his representative.

"Sheriff" or "Sheriff's Office" means, respectively, the Kern County Sheriff or the Kern County Sheriff's Office responsible for law enforcement in the County.

"State" means the State of California.

"Tribe" means the Tejon Indian Tribe, a federally recognized Indian tribe.

"Tribal-State Compact" means (i) a Tribal-State gaming compact for the Project between the Tribe and the State that has been approved by the Secretary or allowed to become effective by operation of law pursuant to IGRA; or (ii) procedures prescribed by the Secretary governing the conduct of class III gaming activities by the Tribe issued pursuant to IGRA.

"Trust Acquisition" means the acquisition by the United States of title to the Property in trust for the Tribe for gaming and other purposes.

2. Non-recurring EIS Mitigation and Other Payments

(a) Non-recurring EIS Mitigation

The Tribe shall implement the following mitigation measures commencing after the Construction Date to provide for the timely mitigation of potentially significant impacts of the Project identified in the EIS as set forth in this Subsection 2(a).

(i) Joint Substation

The Tribe shall develop, build, and fully furnish a new fire and sheriff joint substation ("Joint Substation") for lease by the County Fire Department and Sheriff's Office at a total cost not to exceed ten million dollars ($10,000,000). The Joint Substation shall be located on approximately four (4) acres of land in the southwest corner of the Property and designed in accordance with plans provided by the County and analyzed in the EIS. Construction of the Joint Substation shall commence after the Construction Date, be built in compliance with the Applicable Codes, and shall include all utilities, including water, sewer, and roof-top solar. Upon completion of the Joint Substation, the Tribe shall lease the Joint Substation to the County for a minimum term of twenty (20) years at one dollar ($1) per annum or as otherwise agreed upon by the Parties.

(ii) Ladder Truck

The Tribe shall pay the County the actual cost, in an amount not to exceed one million eight hundred thousand dollars ($1,800,000), to purchase a fully equipped, 110-foot ladder truck for use by the County Fire Department from the Joint Substation. Following the Construction Date, the Tribe shall make a one-time payment to the County Administrative Office to provide for delivery of the ladder truck prior to the Opening Date. The Tribe shall pay the amount requested within sixty (60) days after receipt of a request for payment from the County.

(iii) Patrol Vehicles

The Tribe shall pay the County the actual cost, in an amount not to exceed nine hundred sixty-two thousand dollars ($962,000), to purchase up to twelve (12) new, fully equipped patrol vehicles for use by the Sheriff's Office from the Joint Substation. Following the Construction Date, the Tribe shall make payments to the County Administrative Office on a schedule that provides for the delivery of patrol vehicles to the Joint Substation thirty (30) days prior to new Sheriff's Office staff beginning assignment at the Joint Substation. The Tribe shall pay the amount requested within sixty (60) days after receipt of a request for payment from the County.

(b) Other Non-recurring Payments

The Tribe shall make the following non-recurring payments after the Construction Date to compensate the County for law enforcement, fire protection, emergency services and any other public services to be provided by the County to the Tribe as a consequence of the Project as set forth in this Subsection 2(b).

(i) Law Enforcement Training Academy

The Tribe shall pay the County five hundred thousand dollars ($500,000) for training of new Sheriff's Office recruits for the Joint Substation at the Kern County Regional Law Enforcement Training Academy. Following the Construction Date, the

Tribe shall make a one-time payment to the County Administrative Office within sixty (60) days after receipt of a request for payment from the County.

(ii) Wildlands Fire Vehicle

The Tribe shall pay the County the actual cost, in an amount not to exceed one hundred thirty thousand dollars ($130,000), to purchase a type 6 wildlands fire vehicle for use by the County Fire Department at the Joint Substation. Following the Construction Date, the Tribe shall make a one-time payment to the County Administrative Office to provide for delivery of the wildlands fire vehicle prior to the Opening Date. The Tribe shall pay the amount requested within sixty (60) days after receipt of a request for payment from the County.

3. Recurring Payments

(a) Recurring Payments for Services

The Tribe shall make the following recurring payments after the Opening Date to compensate the County for law enforcement, fire protection, emergency services and all other public services to be provided by the County to the Tribe for all purposes of the Project and to mitigate all other impacts of the Project on the County and any potentially significant effect on the Property and surrounding community as a consequence of the Project as set forth in this Section 3.

(i) Fire Services Payments

The Tribe shall make recurring payments to the County equal to the actual cost of the County Fire Department's staffing of the Joint Substation in an amount not to exceed two million eight hundred seventy-five thousand dollars ($2,875,000) per annum. Such payments shall pay the salaries and benefits of not more than twelve (12) new County Fire Department positions at the Joint Substation, including three captains, three engineers, and six emergency medical technician (EMT) firefighters. The Tribe shall make payments on a schedule reflecting actual staffing at the Joint Substation. By way of example only, in the event staffing at the Joint Substation was at nine positions in the first year, the payments due to the County would be limited to the salaries and benefits of those nine positions.

(ii) Law Enforcement Payments

The Tribe shall make recurring payments to the County equal to the actual cost of the Sheriff's Office staffing of the Joint Substation in an amount not to exceed two million five hundred thousand dollars ($2,500,000) per annum. Such payments shall pay the salaries and benefits of not more than thirteen (13) new Sheriff's Office positions at the Joint Substation, including one sergeant, one senior deputy, ten deputies, and one clerk. The Tribe shall make payments on a schedule reflecting actual staffing at the Joint Substation. By way of example only, in the event staffing at the Joint Substation was at nine positions in the first year, the payments due to the County would be limited to the salaries and benefits of those nine positions.

(iii) General Fund Payments

The Tribe shall make recurring payments equal to the one percent (1%) General Government Factor multiplied by the appropriate factor for the General Fund in Tax Rate Area 118-006, as established in the tax year of the Opening Date, multiplied by the dollar value of the Gaming Facility constructed on the Property for deposit in the General Fund of the County for payment of all other general government services to the Property. By way of example only, in the event the Gaming Facility opened in 2019 and had an initial value of six hundred million dollars ($600 million), the payment due to the County per annum would be calculated as follows:

Initial Gaming Facility Value: $600,000,000
1% General Government Factor: 0.01 x $600,000,000 = $6,000,000
General Fund Factor for TRA 118-006 Tax Year 2019: 0.345521 x $6,000,000 = $2,073,126.

In the event one or more additional phases of construction are later added to the Gaming Facility, the value of the Gaming Facility shall be increased by the value of such additional phase as submitted to the County by the Tribe. By way of example only, if an additional phase of the Gaming Facility opened in 2020 and had a value of one hundred million dollars ($100 million), the payment due to the County per annum for that additional phase would be calculated as follows:

Additional Phase of Construction Gaming Facility Value: $100,000,000
1% General Government Factor: 0.01 x $100,000,000 = $1,000,000
General Fund Factor for TRA 118-006 Tax Year 2020: 0.345521 x $1,000,000 = $345,521.

For purposes of this Subsection and Subsection 3(a)(iv) below, the "dollar value of the Gaming Facility" refers to the total cost to design, engineer, construct, furnish, install, and equip the Gaming Facility and related infrastructure, but shall not include such costs associated with the construction and furnishing of the Substation, predevelopment and financing costs, and the cost of any off-site road or other public improvements.

(iv) Capital Maintenance Payments

The Tribe shall make recurring payments to the County equal to the one percent (1%) General Government Factor multiplied by the appropriate factor for the Fire Fund in Tax Rate Area 118-006, as established in the tax year of the Opening Date, multiplied by the dollar value of the Gaming Facility constructed on the Property for deposit in the General Fund of the County for payment of capital maintenance costs of the County Fire Department and the Sheriff's Office. By way of example only, in the event the initial Gaming Facility opened in 2019 and had an initial value of six hundred million dollars ($600 million), the payment due to the County per annum would be calculated as follows:

Initial Gaming Facility Value: $600,000,000
1% General Government Factor: .01 x $600,000,000 = $6,000,000
Fire Fund Factor for TRA 118-006 Tax Year 2019: 0.101074 x $6,000,000 = $606,444

In the event one or more additional phases of construction are later added to the Gaming Facility, the value of the Gaming Facility shall be increased by the value of such additional phase as submitted to the County by the Tribe. By way of example only, if an additional phase of the Gaming Facility opened in 2020 and had a value of one hundred million dollars ($100 million), the payment due to the County per annum for that additional phase would be calculated as follows:

Additional Phase of Construction Gaming Facility Value: $100,000,000
1% General Government Factor: 0.01 x $100,000,000 = $1,000,000
Fire Fund Factor for TRA 118-006 Tax Year 2020: 0.101074 x $1,000,000 = $101,074.

(b) Recurring Occupied Room Fee Payments

Following the opening of a hotel on the Property, the Tribe shall make recurring payments to the County in an amount equivalent to six percent (6%) of the revenue paid for occupied rooms in such hotel. The Tribe shall assess a tax on the amount paid for occupied hotel rooms at the Project as least as high as the highest occupied room fee assessed within the County and the incorporated areas within the County.

(c) Recurring Problem Gambling Payments

To provide reasonable compensation for programs designed to address gambling addiction, the Tribe shall make recurring payments of no less than fifty thousand dollars ($50,000) per annum to one or more organizations dedicated to the prevention and treatment of gambling addiction which are located or able to provide services within the County. The Parties shall determine the recipient organization(s) by mutual agreement.

(d) Recurring Payment Terms

The recurring payments to be made on an a per annum basis under Subsections 3(a) and (b) of this Agreement shall be made to the County Administrative Office after the Opening Date in four (4) successive, equal quarterly installments within thirty (30) days following the end of each full calendar quarter, unless the Parties agree otherwise. The first payment shall be due on the thirtieth (30^{th}) day following the end of the first full quarter and shall cover the prorated period from the Opening Date to the end of the first full calendar quarter of operations. The County shall determine the amount of each recurring payment due under Subsection 3(a) at least thirty (30) days prior to the Opening Date and by June 1 of each year thereafter. The County shall provide the Tribe a statement in sufficient detail for the Tribe to verify the amounts paid in the prior year and to identify the payment amounts due in the upcoming year based on projected staffing of the Substation as adjusted by (i) any deductions under Subsection 4(d) and (ii) the CPI Adjustment.

(e) CPI Adjustment

All recurring payments described in Subsection 3(a) of this Agreement shall be increased annually by the CPI Adjustment, which shall be effective on July 1 of each year following the Opening Date, provided that, the increase in the payments described in Subsections(3)(a)(iii) and (3)(a)(iv) shall not exceed the rate set forth in the California Constitution, article XIII A, section 2(b).

4. Payment Matters

(a) Sufficiency of Payments

The County has determined that the payments referenced in Sections 2 and 3 of this Agreement are sufficient to (i) compensate the County for any public services to be provided by the County in connection with the Tribe's Project, and (ii) mitigate all other impacts of the Project on the County, and, as a result, the Trust Acquisition and the Project will not have a detrimental impact on the County and the surrounding community.

(b) Distribution of Payments

The County Administrative Office shall be responsible for County compliance with this Agreement and distributing the payments referenced in Section 2 and Subsections 3(a) and 3(b) of this Agreement to the appropriate County departments, agencies and subdivisions.

(c) Contingency of Payments

The Parties acknowledge and agree that the Project and the Tribe's implementation of the non-recurring mitigation measures and other payments set forth in Section 2 of this Agreement are, and shall be, contingent upon the occurrence of (i) the

Trust Acquisition and (ii) the Construction Date. The Parties further acknowledge and agree that the Tribe's obligation for the recurring payments set forth in Section 3 of this Agreement are, and shall be, contingent upon (i) the Tribal-State Compact being in effect and (ii) the occurrence of the Opening Date. In the event the Construction Date does not occur for any reason, no payments shall be owed and the Tribe shall have no further obligations under this Agreement. The County shall make good faith efforts to segregate and identify expenditures made with payments provided to the County by the Tribe under this Agreement and to publicly attribute such expenditures to the Tribe.

(d) Deductions

The Tribe may deduct the following amounts from the next payment that the Tribe would otherwise be required to make pursuant to Section 3 of this Agreement:

(i) the amount of any payments, if any, which the Tribe pays the County in excess of the amounts identified in Section 2 of this Agreement;

(ii) the amount of any payments, if any, which the Tribe pays in advance of the dates set forth in Section 2 of this Agreement, plus interest on such amount at the prime lending rate of Bank of America from the date the payment is made until the date the payment would otherwise have been due;

(iii) the amount of any payments, if any, which the Tribe receives, or is entitled to receive, from state, federal or other sources and directs to be paid to, and is accepted by, the County;

(iv) the amount of any overpayments made under Subsection 3(a)(i) and (ii) as a result of a reduction in staffing at the Substation for a period of ninety (90) consecutive days or longer; and

(v) should an approved development project fund any of the same items set forth in Sections 2 or 3 of this Agreement, the Tribe shall be entitled to a dollar-for-dollar deduction or refund at the time the County receives funding from the approved development project until such time as the Tribe recovers an amount attributable to the impacts of the approved development project or the Tribe's contribution is equal to the quantifiable impacts of the Gaming Facility.

5. Funding Mechanism

This Agreement creates a funding mechanism which does not commit the County to make any physical changes in the environment. By approving and performing the transactions contemplated by this Agreement, the County does not and does not commit itself to, (i) issue any lease, permit, license, certificate or entitlement for use, (ii) develop, construct or improve any facilities or cause any other physical changes to the environment, or (iii) approve, shape, deliberate on or otherwise exercise judgment over

the Trust Acquisition or other federal or state actions for the Project. Further, nothing in this Agreement contemplates or commits the County to any project which may result in a potentially significant physical impact on the environment. If and to the extent the County hereafter determines that it is required to comply with CEQA with respect to any "project" (as such term is defined in CEQA) which causes a physical change in the environment, the County fully intends to comply with CEQA at such time.

6. Additional Tribal Covenants

(a) Local Hiring

Prior to the Construction Date, the Tribe shall submit a letter to the County detailing its efforts to encourage all contractors of the Project site to hire at least 50 percent of their workers from local communities in the County. The Tribe shall provide the contractors a list of training programs that provide skilled workers and shall require the contractors to advertise locally for available jobs, notifying the training programs of job availability, all in conjunction with normal hiring practices of the contractor. Nothing herein is intended to limit the Tribe's right to provide a preference in employment to members of federally recognized Indian tribes pursuant to tribal law.

(b) Cannabis

The Tribe agrees to follow federal law regarding the cultivation or use of cannabis on the Property. The Tribe further agrees to adopt as tribal law a cannabis code that is consistent with County policy should that policy prohibit the cultivation, sale or use of cannabis.

(c) Public Health and Safety Requirements in Compact

The Parties anticipate the Tribal-State Compact to include provisions that subject the Gaming Facility to inspections and enforcement mechanisms for verifying compliance with Applicable Codes, applicable County and State public health standards for food and beverage handling, federal water quality and safe drinking standards applicable in California, and federal, State and County workplace and occupational health and safety standards. In the event the Tribal-State Compact does not contain provisions relating to the above-referenced topics which are substantially similar or identical to those found in other tribal-state compacts in California in effect at the time of the execution of this Agreement, the County may request that the Tribe enter into negotiations with the County, in which event the Tribe shall enter into good faith negotiations with the County, to execute and deliver an agreement or other arrangement with the County on mutually agreeable terms to address the need for such public health and safety requirements.

(d) County Services

The Parties acknowledge that, under the current design of the Project, the Tribe has not requested the County to provide, and the County does not hereby commit itself to provide, water, wastewater, electricity, natural gas or telecommunications services to the Project or the Property. At the request of the Tribe or as otherwise provided under the Tribal-State Compact, the County shall provide health and safety inspections or other services for the Project in accordance with applicable policies and procedures and the Tribe shall grant access to the Property for that purpose. The Tribe shall pay to the County the applicable fee or fees set by ordinance or resolution for the particular inspection or other service provided and the County shall provide to the Tribe the results of any such inspection. Full payment shall be made by the Tribe within thirty (30) days after the service is rendered.

(e) EMS Services

The Tribe agrees to permit the Exclusive Provider ("EP") in Exclusive Operating Area 8 access to the Property in order for EP to provide all ground ambulance service and Basic Life Support (BLS) and Advanced Life Support (ALS) standby services, as defined in the Kern County Ambulance Ordinance, codified at Chapter 8.12 of the Kern County Ordinance Code. The EP, in providing such service, shall comply with all regulations, policies, procedures, standards, and protocols that are effective during the term of this Agreement. Notwithstanding the foregoing, during the term of this Agreement EP shall charge the rates established by the Kern County Board of Supervisors for Exclusive Operating Area 8 for services provided on the Property. The EP shall not charge the Tribe or any person at the Property any service rate, cost, fee or additional charge not approved by the Kern County Board of Supervisors for Exclusive Operating Area 8. Further, EP shall not require the Tribe or the Gaming Entity to purchase or provide funding for any equipment, facilities or staff.

7. Mutual Aid Arrangements

(a) Mutual Aid

Upon the request of the Tribe, the County or its departments will enter into good faith negotiations with the Tribe to execute and deliver a mutual aid agreement or other arrangements with the Tribe on mutually agreeable terms relating to fire protection, emergency services, first responder and law enforcement responses.

(b) Law Enforcement

(i) Upon the request of the Tribe, the County or its departments will

enter into good faith negotiations with the Tribe to execute and deliver agreements or arrangements on mutually agreeable terms relating to investigation, jurisdictional or other similar issues. The Tribe acknowledges that, pursuant to, and to the extent set forth in, federal Public Law 280 as in effect and construed as of the date of this Agreement, most State criminal laws will have the same force and effect on the Property as they have elsewhere in the State and the Sheriff will have jurisdiction over most offenses committed by or against Indians on the Property. However, nothing in this Subsection or any agreement entered into pursuant to this Subsection does or is intended to create County, State or other Public Entity jurisdiction over the Tribe or the Property.

(ii) Control of Sheriff's Personnel: The Sheriff shall provide not less than the level of service to the Property as he or she provides to non-tribal properties within the County. Selection, supervision, and quality control of the officers assigned to the Joint Substation shall be the sole responsibility of the Sheriff's Office. The Sheriff, in his or her sole discretion, may deploy Joint Substation personnel or equipment to preserve the peace as may be deemed necessary under the existing circumstances. The Sheriff shall exercise this discretion in good faith with the goal of keeping the peace in a non-discriminatory manner. In the event of an emergency or other temporary situation elsewhere in the County, the Sheriff reserves the right to assign any and all of his or her personnel to that emergency or other temporary situation. Sheriff's Office personnel will work closely with Tribal staff to maintain peace and order. Sheriff's Office personnel will adhere to their policies, state laws, and federal laws in providing services to the Property.

(c) Additional Mutual Aid Arrangement Matters

(i) The Parties do not intend that (i) the Tribe shall make any contributions or payments to the County or any other entity pursuant to the mutual aid or other agreements or arrangements contemplated by this Section; (ii) the Tribe shall be required to include the County as a party to, or obtain the approval of the County for, any such mutual aid or other agreements or arrangements between the Tribe and any entity other than the County.

(ii) David Road Agreement: In consideration of the payments made under this Agreement, County shall waive any claims for payment for Law Enforcement Services as described in Section 3 of the David Road Agreement and any claims for payment for Emergency Medical, Fire, and Hazmat Services as described in Section 4 of the David Road Agreement.

8. Term

(a) Effective Date

This Agreement shall not become effective unless and until the following events have occurred:

(i) This Agreement has been approved or ratified by the County Board of Supervisors; and

(ii) This Agreement has been approved or ratified by the General Council of the Tribe.

(b) Expiration Date

Subject to the early termination provisions of this Agreement, this Agreement shall expire on the latter of (i) the twentieth (20^{th}) anniversary of the date of this Agreement, or (ii) the date of the expiration or termination of the Tribal-State Compact.

9. Termination

(a) Termination Events

Unless otherwise agreed by the Parties, this Agreement shall automatically terminate in the event, and on the date, that:

(i) prior to the Trust Acquisition Date, the Tribe submits a written notice to the County to the effect that the Tribe has permanently decided (i) to withdraw or not submit any application requesting that the Secretary accept trust title to the Property for the benefit of the Tribe or (ii) to otherwise cease development or operation of the Gaming Facility; or

(ii) after the Trust Acquisition, the Property (i) is removed from trust or restricted status such that the Property is no longer held in trust by the United States for the benefit of the Tribe, (ii) is no longer "Indian country" within the meaning of federal law, or (iii) is otherwise not eligible for the development or operation of the Gaming Facility for any reason; or

(iii) after the Tribal-State Compact becomes effective, such Tribal-State Compact expires or terminates for any reason or is determined by the Secretary or any court of competent jurisdiction to be unlawful or otherwise ineffective for any reason; or

(iv) the Tribe permanently ceases commercial operations on the Property.

(b) Retention of Funds

In the event of a termination of this Agreement, the County will be entitled to retain any recurring, non-recurring, and non-recurring EIS mitigation payments for services paid to the County through the effective date of termination, but the County will not be entitled to receive any recurring, non-recurring, or non-recurring EIS mitigation payments for services payable after the effective date of termination. In the event of a termination of this Agreement pursuant to Subsection 9(a)(ii) or (a)(iii), the County will not be entitled to retain any recurring, non-recurring, or non-recurring EIS mitigation payments for services paid to the County through the effective date of termination.

10. Suspension Events

If, due to Force Majeure (as hereinafter defined), an act of God, valid business considerations, or the events listed in Section 12 of this Agreement, a material portion of the gaming operations previously conducted by the Tribe on the Property are suspended or terminated, the Parties' obligations under this Agreement shall be suspended as of the date of such suspension or termination until such time as such operations are resumed. For the purposes of this Section, the term "Force Majeure" shall include, without limitation, the following: earthquake; flood; fire; other natural disasters; changes in law, regulation or governmental policy that has a material adverse effect on the Project; riots; war; or terrorism. Nothing in this Section shall reduce the Tribe's liability for contributions or other payments which become due and payable prior to the date such gaming operations are suspended or terminated.

11. Renegotiation Provisions

(a) Tribe Renegotiation Events

The Tribe may request that the County renegotiate one or more of the provisions of this Agreement if there is a change in law or other circumstances which has a significant and adverse financial impact on the Project or the Gaming Facility. Such changes shall be deemed to include, without limitation, the following:

(i) any change in State or federal constitutions, laws, rules or regulations, guidelines or bulletins, or the construction or interpretation thereof, relating to IGRA or gaming on Indian lands, or ending the prohibition on class III gaming (as defined in IGRA) or the operation of gaming devices by non-Indians in the State;

(ii) a reduction in the scope of gaming permitted on the Property, whether pursuant to a change in federal, State or local constitutions, laws, rules or regulations, the Tribal-State Compact or otherwise; or

(iii) the Tribal-State Compact, as amended or interpreted from time to time, (A) does not authorize the Tribe to conduct the scope of class III (as defined in IGRA) gaming activities substantially similar or identical to those authorized under other tribal-state compacts in California in effect at the time of execution of this Agreement, or (B) does not authorize the Tribe to operate at least two thousand (2000) gaming devices.

(b) County Renegotiation Events

At the County's request, the Tribe shall renegotiate one or more of the provisions of this Agreement if the Tribe materially expands the public spaces of the Gaming Facility beyond the footprint of the preferred alternative identified in the Record of Decision.

(c) Effect of Expiration or Termination

Upon expiration or termination of this Agreement, the provisions of this Agreement shall be of no further force or effect and none of the provisions of this Agreement shall survive such expiration or termination; provided, however, that the Tribe shall continue to make contributions pursuant to the terms of this Agreement which became due and payable prior to any expiration or termination date.

(d) Renegotiation Procedures

Upon the occurrence of a renegotiation event identified in this Section, all requests by either Party to renegotiate or amend this Agreement shall be by written notice addressed to the other Party and shall identify the provisions of this Agreement to be negotiated. Upon receipt of such notice, the Parties shall be obligated to renegotiate this Agreement in good faith. The Parties shall confer promptly and determine a schedule for commencing negotiations within thirty (30) days of receipt of notice. The Parties are hereby authorized to designate the person or agency responsible for conducting the negotiations, and shall execute any documents necessary to do so. The purpose of the negotiations will be to renegotiate the provisions of this Agreement in good faith so that the Parties will retain substantially the same rights and economic benefits in the aggregate from the Project as contemplated on the date of execution of this Agreement. Any requested increase in the level of contributions made by the Tribe pursuant to this Agreement shall be consistent with payments for other similar commercial uses in the County.

(e) Amendments

This Agreement may be modified or amended only by mutual and written agreement of the Parties.

12. Severability

(a) If any provision of this Agreement is held by the Secretary, the arbitrators or a court of competent jurisdiction to be illegal, invalid, unenforceable, or unauthorized under present or future laws, the remaining provisions of this Agreement shall remain in full force and effect and shall not be affected by the illegal, invalid, unenforceable, unauthorized or non-compliant provision or by its severance from this Agreement. In the event of any such determination, the Parties shall enter into good faith negotiations to replace the invalid provision with a valid provision, the economic or practical effect of which comes as close as possible to that of the invalid provision, which negotiations shall be conducted pursuant to the provisions of Subsection 13(d) of this Agreement.

(b) In the event that the entire Agreement is declared null and void or is unauthorized, the Parties shall enter into good faith negotiations to negotiate a new intergovernmental agreement.

13. Dispute Resolution Provisions

(a) Dispute Resolution

In an effort to foster good government-to-government relationships and to ensure implementation of this Agreement, the Parties agree to the dispute resolution procedures set forth in this Section. The Parties further agree that any dispute regarding the Sheriff's Office's obligations under this Agreement shall be resolved by the Parties pursuant to this Section 13. This section shall not be construed to waive, limit, or restrict the ability of the Parties to pursue, by mutual agreement, any other method of dispute resolution, including, but not limited to, mediation, or utilization of a technical advisor to the Parties; provided, however, that no Party is under an obligation to agree to such alternative method of dispute resolution.

(b) Meeting

The Parties shall make their best efforts to resolve any dispute specifically arising under this Agreement by good faith negotiations whenever possible. The Parties shall meet and confer in good faith to resolve any disputes arising under the Agreement or concerning its terms or administration as follows:

(i) A Party shall give the other Party, as soon as possible after the dispute arises, written notice setting forth, with specificity, the Party's claims.

(ii) The Parties shall meet and confer in a good faith attempt to resolve such dispute through negotiation not later than ten (10) business days after receipt of notice, unless the Parties agree in writing to an extension of time.

(iii) In the event that a payment dispute arises between the Parties, the

Party disputing the payment shall pay the disputed amount "under protest." If the payment dispute is resolved in favor of the Party who paid the disputed amount under protest, that Party shall be refunded the amount of the overpayment plus interest calculated as follows:

(No. of Days Overpaid/365) x Pooled Treasury Rate x $ Amount of Overpayment = Overpayment Interest Charge

(c) Arbitration

If such dispute is not resolved to the satisfaction of the Parties within thirty (30) calendar days after the first meeting, then either Party may seek to have the dispute resolved by arbitration in accordance with the following procedures; provided, however, that neither party shall be required to agree to submit to arbitration.

(i) Upon the request of a Party in writing, the dispute shall be submitted to binding arbitration in accordance with this Subsection.

(ii) The disputes to be submitted to arbitration shall be limited to disputes specifically arising under this Agreement.

(iii) In the event that there is any dispute as to whether a matter is subject to the arbitration provisions of this Agreement, or any dispute concerning the scope of the matter or matters to be arbitrated, the disagreement as to whether the dispute is subject to the arbitration provisions of this Agreement or the scope of such arbitration shall be resolved by the courts referenced in Subsection (d) of this Section.

(iv) The arbitration shall be administered by three (3) arbitrators with Judicial Arbitration and Mediation Services ("JAMS"). The Tribe and the County shall each select one (1) arbitrator and those two (2) arbitrators shall select the third arbitrator. All arbitrators shall be generally familiar with federal Indian law and commercial business transactions and shall have no interest in the matter.

(v) The arbitration shall be held in Bakersfield, California, or at such other location as is mutually agreeable to the Parties.

(vi) The arbitration shall be administered in accordance with the Streamlined Arbitration Rules and Procedures of JAMS (or if those rules no longer exist, the closest equivalent) as modified by the provisions of this Agreement.

(vii) The provisions of section 1283.05 of the California Code of Civil Procedure shall apply; provided that no discovery authorized by that section may be conducted without leave of the arbitrators.

(viii) Each Party shall bear its own costs, attorneys' fees and one-half of the costs and expenses of the arbitrators.

(ix) Subject to the provisions of this Section, the arbitrators shall be empowered to grant compensatory and declaratory relief only.

(x) The decision of the arbitrators shall be in writing and shall give reasons for the decision.

(xi) Confirmation of Decisions. Any Party to an arbitration in which a decision has been made pursuant to this Section may petition the United States District Court for the Eastern District of California or the Superior Court of California for the County to affirm the decision. The Parties expressly consent to be sued in such courts for affirmation of any such decision. A decision shall be affirmed, provided that:

(1) The decision is limited to matters specifically arising under this Agreement.

(2) No monetary damages may be awarded except those which require the payment of sums pursuant to breaches of obligations of the Parties under this Agreement and which are not inconsistent with Section 15 (Damages) and Section 14(b) (Limitations of Tribe's Waiver) of this Agreement.

(3) No person or entity other than the Parties is party to the action, unless failure to join a third party would deprive the court of jurisdiction; provided that nothing herein shall be construed to constitute a waiver of the sovereign immunity of the Parties in respect to any such third party.

If an award is affirmed, judgment shall be entered in conformity therewith. The judgment so entered has the same force and effect as, and is subject to all the provisions of law relating to, a judgment in a civil action and may be enforced like any other judgment of the court in which it is entered.

(d) Actions

The express waivers and consents provided for in this Section and Section 14 of this Agreement shall only extend to the following: civil actions specifically arising under this Agreement; civil actions to compel arbitration; civil actions to determine whether a matter is subject to arbitration or determine the scope of the arbitration; any arbitration proceeding as provided herein; any action to confirm or enforce any judgment or arbitration award as provided herein; and any appellate proceedings emanating from a matter in which an immunity waiver has been granted. Except as stated herein or elsewhere in this Agreement, no other waivers or consents to be sued, either express or implied, are granted by either Party.

(e) Submission to Federal or Superior Court

Disagreements on matters specifically arising under this Agreement that are not otherwise resolved by arbitration or other mutually acceptable means provided in this Section may be resolved in the United States District Court for the Eastern District of California or the Kern County Superior Court. Any such action pursuant to this subsection is expressly limited to disagreements on matters specifically arising under this Agreement, limited to compensatory and declaratory relief only, and subject to Sections 14 and 15 of this Agreement. The Parties agree that no person or entity other than the Parties shall be a party to the action, unless failure to join a third party would deprive the court of jurisdiction; provided that nothing herein shall be construed to constitute a waiver of the sovereign immunity of the Parties in respect to any such third party. Each Party shall bear its own costs, attorneys' fees and court costs. The parties agree that, except in case of imminent threat to the public health or safety, best efforts will be made to resolve the matter using alternative dispute resolution prior to resorting to judicial process.

(f) No Waiver of Breach

The waiver by the County or the Tribe of any term, covenant, or condition contained in this Agreement must be in writing and shall not be deemed to be a waiver of any subsequent breach of the term, covenant, or condition, and no custom or practice that may arise between the Parties during the course of this Agreement shall be construed to waive or lessen the right of the County or the Tribe to performance by the Parties in strict accordance with the terms of this Agreement.

(g) Confidentiality

The Parties agree that any dispute resolution meetings or communications, arbitration proceedings, or agreements among the Parties settling or otherwise relating to any claims of breach of this Agreement or otherwise shall be and remain confidential to the extent not prohibited by applicable law.

14. Limited Waiver of Sovereign Immunity

(a) Waiver

Subject to the provisions of this Section, the Tribe expressly and irrevocably waives sovereign immunity (and any defenses based thereon) in favor of the County (but not as to any other person or entity) as to any disputes specifically arising under this Agreement and not as to any other actions, matters or disputes.

(b) Limitations of Tribe's Waiver

The Tribe's waiver of sovereign immunity in favor of the County is specifically limited to permitting, and does permit, the decisions referenced in Subsection 13(c)(ix) and actions referenced in Subsection 13(e). The arbitrators and the courts will have no authority or jurisdiction to issue any monetary award or damages or order the execution or enforcement of any monetary award or damages against any assets or revenues of the Tribe except for the Tribe's share of the net revenues (as defined by IGRA) from the Gaming Facility. The Tribe does not waive its sovereign immunity with respect to (i) actions by third parties, or (ii) disputes between the Tribe and the County which do not specifically arise under this Agreement.

(c) Tribal General Council Resolution

The Tribe represents to the County that its Tribal General Council has adopted a resolution in accordance with the Tribe's Constitution which provides that (i) the Chairperson of the Tribal Executive Committee has the authority to act on behalf of the Tribe in connection with the execution and delivery of this Agreement, (ii) the Tribal General Council delegates authority to the Chairperson to execute and deliver this Agreement on behalf of the Tribe and (iii) the Tribe waives sovereign immunity on a limited basis as set forth in this Agreement. A certified copy of the resolution is attached to this Agreement as Exhibit A.

15. Damages

The Parties hereby agree that, in the event of default, any damages awarded or arising under this Agreement shall be exclusively limited to actual direct damages incurred and which have been demonstrated with substantial certainty. In no instance shall the Parties to this Agreement be entitled to special, incidental, indirect, consequential or punitive damages, lost profits or attorney's fees. By acceptance and execution of this Agreement, the Parties hereby agree that the only monetary damages contemplated by the Parties as arising from this Agreement are actual or direct damages which do not, in any event, exceed the contribution amounts expressly stated in this Agreement and that the Parties are precluded from asserting any claims for additional or other monetary damages.

16. No Submission to Jurisdiction

The Parties acknowledge and agree that nothing in this Agreement shall be construed as constituting a submission by the Tribe to the jurisdiction of the County. Nothing in this Agreement shall be construed to state or imply that the Tribe would be required to make the contributions or covenants set forth in this Agreement other than pursuant to the terms and conditions of this Agreement.

17. County Obligation

Subject to the limitations in Section 5, the County agrees to support the Trust Acquisition and the Project and to provide such letters of support or other communication which the Tribe may reasonably request from time to time.

18. Third Party Matters

This Agreement is not intended to, and will not be construed to, create any right on the part of any other third party to bring any action or to otherwise enforce any of its terms.

19. Binding Agreement

This Agreement is intended to be, and shall be construed to be, binding upon the Parties and all successors and successors-in-interest of each Party. The County intends that its approval, execution, delivery and performance of this Agreement shall (i) be construed to be administrative actions, as distinguished from legislative actions, and (ii) not be construed to be an express or implied enactment, adoption or amendment of any zoning ordinance, general plan, special plan or elements thereof.

20. Notice

All notices required by this Agreement will be deemed to have been given when made in writing and delivered or mailed to the Party and its representatives at their respective addresses as set forth below, or such other address as they may provide to the other Party from time to time:

Bakersfield, California 93301

21. Governing Law

This Agreement shall be governed by, and construed in accordance with, the laws of the State.

22. Construction of Agreement

This Agreement, including all recitals, together with all Exhibits, constitutes the entire agreement between the Parties relating to the subject matter hereof and supersedes all prior negotiations, representations or other agreements, whether written or oral. In the event of a dispute between the Parties as to the language of this Agreement or the construction or meaning of any term hereof, this Agreement shall be deemed to have been drafted by the Parties in equal parts so that no presumptions or inferences concerning its terms or interpretation may be construed against, or in favor of, any Party based on the preparation or negotiation of this Agreement. The headings contained in this Agreement are for convenience of reference only and shall not affect the construction or interpretation hereof.

23. Counterparts

This Agreement may executed in counterparts, each of which shall be deemed an original.

24. Approval by the Department of the Interior

The Parties will submit this Agreement to the Department of the Interior for either (i) approval pursuant to 25 U.S.C. Section 81 or (ii) a written response that this Agreement does not require approval under 25 U.S.C. Section 81.

[THE REMAINDER OF THIS PAGE IS INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties have executed this Agreement as of the date first set forth above.

EXHIBIT A

Tribal General Council Resolution

Tejon Indian Tribe
Resolution No. T2019-100

Whereas, the Tejon Indian Tribe (Tribe) is a federally recognized Indian tribe with the inherent sovereignty to make its own laws and be governed by them; and

Whereas, the Tejon Tribal Constitution authorizes the Tribal Executive Committee to promulgate and enforce ordinances/resolutions governing the Tribe and to manage all economic affairs of the Tribe; and

Whereas, the Tribe's aboriginal homeland includes Kern County and the Tribe shares a common interest with the people of Kern County in fostering a vibrant community for current and future generations; and

Whereas, the Tribe has applied to place approximately 306 acres (Homeland Parcel) of land into trust near Mettler, California, for homeland purposes, including housing, gaming, wellness, health care, administrative offices and other uses; and

Whereas, the Department of the Interior is preparing an environmental impact statement (EIS) for federal approvals concerning the Homeland Parcel to evaluate the impacts of taking those federal actions; and

Whereas, the EIS will take into account intergovernmental agreements regarding mitigation and the provision of services in developing any mitigation measures; and

Whereas, the Tribe will be required to implement the mitigation measures identified in the final EIS pursuant to the Record of Decision for the Trust Acquisition; and

Whereas, the Tribe values vibrant and safe communities and fully supports law enforcement, firefighters and emergency responders in their efforts to maintain safe communities; and

Whereas, the attached Intergovernmental Agreement between the Tribe and Kern County ("Intergovernmental Agreement") is intended to promote the best interests of the Tribe and the surrounding community of Kern County; and

Whereas, the Tribe recognizes that it does not currently have the capacity to provide all governmental services to the Homeland Parcel; and

Whereas, the Tribe is dedicated to working amicably with the County of Kern; and

Whereas, there is mutual recognition of the Tribe's status as a federally recognized tribe with authority to make laws and be governed by them; and

Whereas, the Intergovernmental Agreement includes covenants by the Tribe to encourage local hiring, to comply with applicable County and State public health, environmental, and workplace and occupational health and safety standards for the Gaming Facility; and

Whereas, the Intergovernmental Agreement provides for the Tribe to make both non-recurring and recurring payments to the County for law enforcement, fire protection and all other public services to the Homeland Parcel for the Tribe and its members; and

Whereas, the Intergovernmental Agreement provides a limited waiver of tribal sovereign immunity to the County (but not as to any other person or entity) to resolve disputes specifically arising under the Agreement and limits relief to declaratory and actual, direct compensatory damages only against the Tribe's share of net revenues from the Gaming Facility; and

Whereas, in the spirit of cooperation and collaboration, the Tribe enters into the Intergovernmental Agreement defining the scope of agreement and the scope of services.

Now Therefore Be It Resolved, that the Chairman has the authority to act on behalf of the Tribe in connection with the execution and delivery of the Intergovernmental Agreement, and

Be It Further Resolved, that the Tejon General Tribal Council hereby approves the attached Intergovernmental Agreement, grants the limited waiver of sovereign immunity set forth therein for the purpose of enforcing the agreements contained in the Intergovernmental Agreement, and expressly authorizes the Chairman to execute and deliver the Intergovernmental Agreement on behalf of the Tejon Indian Tribe.

CERTIFICATION

We, the undersigned Chairperson and Treasurer of the Tejon Indian Tribe's Tribal Executive Committee, as representatives of the Tribal General Council, do hereby certify that the Tribal General Council met as a body of whom 30, constituting a quorum, were present at a meeting thereof, duly and regularly called, noticed, convened, and held on the 20th day of July, 2019, and that the foregoing Resolution was duly adopted by the affirmative vote of 90 members, with 3 opposing, and with 0 abstaining.

DATED this 20th day of July, 2019

Octavio Escobedo III, Chairman
Tejon Indian Tribe

ATTEST:

Thomas Gonzales, Vice Chairman
Tejon Indian Tribe

TRANSPORTATION IMPACT ANALYSIS

TEJON CASINO

Kern County, California
October 28, 2019

1.0 INTRODUCTION

This traffic study is being conducted to determine the impacts, if any due to the proposed Tejon Casino. This casino will be built in two phases. This study examines three alternatives on two sites are analyzed in this study. The first Alternative Site (Alternatives A1 and A2) is located south of Valpredo Avenue, west of the Mettler Frontage Road West. The second Alternative Site (Alternative B) is located on the south side of Maricopa Highway, between Wheeler Ridge Access Road and I-5

In all three alternatives, Phase 1 consists of a casino and hotel. Phase 2 will include an Organic Farm, a Residential Community, a Community Park, a Community Center, a Health Center and a Tribal Administration office. This study will include analysis of intersections, segments and freeway mainline segments to determine if the project has any potential impact in any of the analysis scenarios.

The Project includes the following:

- Project Description
- Existing Conditions
- Study Area, Analysis Approach and Methodology
- Significance Criteria
- Analysis of Existing Conditions
- Opening Year (2023) Traffic Volumes
- Trip Generation Discussion
- Analysis of Near-Term Scenarios
- Analysis of Long-Term (Year 2040) Scenarios
- Analysis of the three Project Alternatives
- Significance of Impacts and Mitigation Measures, Post-Mitigation Analysis and Signal Warrant Analysis

2.0 PROJECT DESCRIPTION

Three alternatives are proposed for the Project. Each of the three alternatives are planned to be built in two phases. Phase 1 will include a Casino, hotel, and in two of the three alternatives, a R.V. Park. Phase 2 will include an Organic Farm, a Residential Community, a Community Park, a Community Center, a Health Center and a Tribal Administration office. The size of each of these will vary in each of the alternatives. The three alternatives are described below.

Table 2-1 summarizes the proposed land uses in each of these alternatives.

2.1 Project Alternatives

2.1.1 *Alternative A1 - Casino Resort on the Mettler Site*

The Tribe currently owns an approximately 306-acre site near the community of Mettler in Kern County, California, herein referred to as the Mettler Site. Alternative A1 consists of the development of a portion of the trust property with a variety of commercial uses including, but not limited to, a casino, hotel and spa, meeting rooms, live entertainment venue, restaurants, bars, retail facilities, parking, and other supporting facilities. The remainder of the Mettler Site would remain undeveloped in the near term but could eventually developed at the discretion of the Tribe. Potential future land uses on the Mettler Site could include residential, commercial, and agricultural uses, as well as a community park, tribal administration office, health center, or public areas.

As seen in *Table 2-1*, Alternative A1 includes, a casino with a gaming area of 166,500 SF, a 400-room hotel, 4,500 parking spaces, a 22-acre R.V. park, a 43-acre organic farm, 92 single family homes, a 29-acre community park, a 68,000 SF community center, a 43,000 SF health center and a 42,500 SF tribal administration office.

Primary access to the Alternative A1 Project site will be on SR 166 (Maricopa Highway). This site has convenient access to I-5 and SR 99.

2.1.2 *Alternative A2 - Reduced Casino Resort on the Mettler Site*

Alternative A2 will also be located at the Mettler site. However, most project components would be reduced in size under this alternative. The remainder of the Mettler Site would remain undeveloped in the near term but could eventually be developed at the discretion of the Tribe.

As seen in *Table 2-1*, Alternative A2 includes, a casino with a gaming area of 147,500 SF, a 300-room hotel, 3,600 parking spaces, a 43-acre organic farm, 92 single family homes, a 52-acre community park, a 68,000 SF community center, a 43,000 SF health center and a 42,500 SF tribal administration office.

Primary access to the Alternative A2 Project site will be on SR 166 (Maricopa Highway). This site has convenient access to I-5 and SR 99.

General Note: Line items do not precisely add to total due to rounding.

2.1.3 *Alternative B - Casino Resort on Maricopa Highway Site*

Alternative B is an approximately 118-acre Maricopa Highway Site located within the Historic 1851 Tejon Treaty Area, approximately 0.75 west of the Mettler Site at the southwest corner of the I-5 and State Route 166 (SR-166) interchange.

As seen in *Table 2-1*, Alternative B includes, a casino with a gaming area of 166,500 SF, a 400-room hotel, 4,500 parking spaces, a 5-acre R.V. park, a 30-acre organic farm, 15 single family homes, a 2.5-acre community park, a 9,000 SF community center, a 9,000 SF health center and a 12,000 SF tribal administration office.

Primary access to the Alternative B Project site will be on SR 166 (Maricopa Highway). This site has convenient access to I-5 and SR 99.

3.0 EXISTING CONDITIONS

Effective evaluation of the traffic impacts associated with the proposed Project requires an understanding of the existing transportation system within the project area. ***Figure 3–1*** shows an existing conditions diagram, including intersection traffic controls and lane configurations.

3.1 Existing Street Network

The following is a description of the existing street network in the study area.

Interstate Route 5 (I-5) extends from the Mexican border north through Kern County to the Canadian Border in Washington State. In the Project vicinity, I-5 is a four-lane freeway.

State Route 99 begins south of Bakersfield branching off I-5 and continuing north to Sacramento. Most of State Route 99 is six -lane freeway in Kern County and in the Project vicinity. Sections through Bakersfield have eight lanes. Sections north of McFarland and south of White Lane, in Bakersfield, have four lanes.

State Route 166 (Maricopa Highway) is a 2-lane state highway with 8-foot paved shoulders. No median is provided. The Maricopa Highway begins at Interstate 5 in Mettler Station. State Route 166 continues west through Maricopa into Santa Barbara County where it eventually reaches US 101.

Mettler Frontage Road W. is a 2-lane road with dirt shoulders. No median is provided. Mettler Frontage Road W. begins at Interstate 5 in Mettler Station. State Route 166 continues west through Maricopa into Santa Barbara County where it eventually reaches US 101.

Valpredo Avenue is a 2-lane road with dirt shoulders. No median is provided. Valpredo Avenue begins at I-5 in Mettler Station.

S. Sabodan Street is a 2-lane local road with dirt shoulders. No median is provided. S. Sabodan Street begins at SR 166 and continues south.

3.2 Existing Traffic Volumes

The proposed project is a Casino generating a higher amount of traffic during on Saturdays. Hence, weekday and Saturday counts were conducted.

3.2.1 *Daily Segment Volumes*

Table 3–1 is a summary of the most recent average daily traffic (ADT) volume machine counts conducted on November 1, 2018 (weekday) and December 15, 2018 (Saturday).

3.2.2 *Peak Hour Intersection Volumes*

Manual hand counts at the study area intersections, including bicycle and pedestrian counts, were conducted on November 1, 2018 (weekday) and December 15, 2018 (Saturday).

TABLE 3–1
EXISTING TRAFFIC VOLUMES

Street Segment	Weekday ADT [a]	Saturday ADT [b]
I-5 [c]		
Copus Rd to SR 166 (Maricopa Hwy)	33,600	39,560
SR 166 (Maricopa Hwy) to SR 99	33,600	39,560
SR 99 to S. Wheeler Ridge Rd	76,340	97,140
SR 99 [c]		
Valpredo Rd to SR 166 (Maricopa Hwy)	42,920	56,110
SR 166 (Maricopa Hwy) to I-5	42,420	56,020

4.0 STUDY AREA, ANALYSIS APPROACH AND METHODOLOGY

4.1 Study Area

The study area was determined based on Sec. 902-2 Traffic Study Format, from the *Standards for Traffic Engineering*, Kern County.

The Facilities to be studied shall include any City, State or County facility (mainline, interchange, structure, intersection or any project on the Transportation Impact Fee (TIF) list) when the peak hour trip generation onto said facility exceeds 50 trips. For those facilities currently experiencing level-of-service (LOS) "C" or less, the following "sliding scale" of "added peak project trips" shall be applied as the procedure to determine whether the facility should be included:

Existing LOS	Added Peak Project Trips
"C"	50
"D"	40
"E"	20
"F"	10

Since this is casino Project, substantial traffic is generated by the casino on Saturdays. Hence, in addition to weekday AM (7:00 AM to 9:00 AM) and PM (4:00 PM to 6:00 PM) peak hours, this study includes analysis of the Saturday PM (4:00 PM to 6:00 PM) peak hour. Based on the above standards, the following study area was established based on the Project trip generation and distribution.

INTERSECTIONS

1. Mettler Frontage Road W. / Valpredo Avenue / SR 99 SB Ramps
2. Maricopa Highway / Wheeler Ridge Access Road
3. Maricopa Highway / I-5 SB Ramps
4. Maricopa Highway / I-5 NB Ramps
5. Maricopa Highway / S. Sabodan Street
6. SR 99 SB Off Ramp / Stevens Drive
7. Maricopa Highway / Stevens Drive
8. Maricopa Highway / SR 99 NB Ramps

SEGMENTS

1. **Mettler Frontage Road West:** Copus Road to Valpredo Avenue
2. **Mettler Frontage Road West:** Valpredo Avenue to Maricopa Highway
3. **Valpredo Ave:** I-5 Ramps to SR-99 Ramps
4. **Maricopa Highway:** East of Wheeler Ridge Access Road
5. **Maricopa Highway:** Wheeler Ridge Access Road to I-5 SB Ramps

6. **Maricopa Highway:** I-5 NB Ramps to S Sabodan Street
7. **Maricopa Highway:** S. Sabodan Street to SR-99 Ramps

FREEWAY MAINLINE SEGMENTS

1. **I-5:** Copus Road to Maricopa Highway
2. **I-5:** Maricopa Highway to SR 99
3. **I-5:** SR 99 to Wheeler Ridge Road
4. **SR 99:** Valpredo Avenue to Maricopa Highway
5. **SR 99:** Maricopa Highway to I-5

4.2 Analysis Scenarios

This study includes analysis of the following scenarios for each alternative:

- Existing
- Existing + Project Phase 1
- Opening Year (2023) No Project
- Opening Year (2023) + Project Phase 1
- Long-Term (Year 2040) No Project
- Year 2040 With Entire Project

4.3 Analysis Methodology

Operational analysis of existing and proposed streets and intersections was performed using methods outlined in the "Transportation Research Board, National Research Council", Highway Capacity Manual, (HCM 6). A "Level of Service" designation is the generally accepted gauge for describing the quality of operation of either a roadway segment or intersection. Other attributes of operational quality associated with each level of service are v/c (volume to capacity ratio) for street segments and vehicle delay through an intersection. For each type of street segment or intersection analysis, the criteria to arrive at a particular Level of Service vary slightly. Levels of Service for every type of roadway or intersection are described thoroughly in the Highway Capacity Manual.

LOS is a qualitative measure used to describe a quantitative analysis considering factors such as roadway geometries, signal phasing, speed, travel delay, freedom to maneuver, and safety. Level of service provides an index to the operational qualities of a roadway segment or an intersection. Levels of service designations range from A to F, with LOS A representing the best operating conditions and LOS F representing the worst. Level of service designation is reported differently for signalized and unsignalized intersections, as well as for roadway segments. The level of service analysis results in seconds of delay expressed in terms of letters A through F. Delay is a measure of driver discomfort, frustration, fuel consumption, and lost travel time.

Table 4–1 summarizes the signalized intersections levels of service descriptions. ***Table 4–2*** depicts

the intersection LOS and corresponding delay ranges, which are based on overall intersection delay (signalized intersections) and the average control delay for any particular minor movement (unsignalized intersections), respectively. LOS relative to signalized and unsignalized intersection is further described below.

4.3.1 *Signalized Intersections*

Signalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay was determined utilizing the methodology found in Chapter 19 of the *Highway Capacity Manual 6th Edition (HCM 6),* with the assistance of the *Synchro 10* computer software. The delay values (represented in seconds) were qualified with a corresponding intersection Level of Service (LOS).

In the Highway Capacity Manual 6th Edition (HCM 6), Level of Service for signalized intersections is defined in terms of delay. Delay is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. Specifically, Level of Service criteria are stated in terms of the average control delay per vehicle for a 15-minute analysis period. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay.

Delay is a complex measure, and is dependent on a number of variables, including the quality of progression, the cycle length, the green ratio, and the v/c ratio for the lane group or approach in question.

Level of Service A describes operations with very low delay, (i.e. less than 10.0 seconds per vehicle). This occurs when progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

Level of Service B describes operations with delay in the range of 10.1 to 20.0 seconds per vehicle. This generally occurs with good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.

Level of Service C describes operations with delay in the range of 20.1 to 35.0 seconds per vehicle. These higher delays may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear in the level. The number of vehicles stopping is significant at this level, although many still pass through the intersections without stopping.

Level of Service D describes operations with delay in the range of 35.1 to 55.0 seconds per vehicle. At Level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.

Level of Service E describes operations with delay in the range of 55.1 to 80.0 seconds per vehicle. This is considered to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.

Level of Service F describes operations with delay in excess of 80.0 seconds per vehicle. This is considered to be unacceptable to most drivers. This condition often occurs with over-saturation (i.e. when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing causes to such delay levels.

It may be noted that there are no signalized intersections in the Project study area.

4.3.2 *Unsignalized Intersections*

Unsignalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay and Levels of Service (LOS) was determined based upon the procedures found in Chapter 20 and Chapter 21 of the *HCM 6* with the assistance of the *Synchro 10* computer software.

For unsignalized intersections, level of service is determined by the computed or measured control delay and is defined for each minor movement: level of service is not defined for the intersection as a whole. Level of Service F exists when there are insufficient gaps of suitable size to allow a side street demand to safely cross through a major street traffic stream. This level of service is generally evident from extremely long control delays experienced by side-street traffic and by queuing on the minor-street approaches. The method, however, is based on a constant critical gap size; that is, the critical gap remains constant no matter how long the side-street motorist waits. LOS F may also appear in the form of side-street vehicles selecting smaller-than-usual gaps. In such cases, safety may be a problem, and some disruption to the major traffic stream may result. It is important to note that LOS F may not always result in long queues but may result in adjustments to normal gap acceptance behavior, which are more difficult to observe in the field than queuing.

TABLE 4–1
INTERSECTION LEVEL OF SERVICE DESCRIPTIONS

Level of Service	Description
A	Occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
B	Generally, occurs with good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
C	Generally, results when there is fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear in this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
D	Generally, results in noticeable congestion. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high volume-to-capacity ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	Considered to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high volume-to-capacity ratios. Individual cycle failures are frequent occurrences.
F	Considered to be unacceptable to most drivers. This condition often occurs with over saturation i.e. when arrival flow rates exceed the capacity of the intersection. It may also occur at high volume-to-capacity ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing causes to such delay levels

TABLE 4–2
INTERSECTION LOS & DELAY RANGES

LOS	Delay (seconds/vehicle)	
	Signalized Intersections	Unsignalized Intersections
A	≤ 10.0	≤ 10.0
B	10.1 to 20.0	10.1 to 15.0
C	20.1 to 35.0	15.1 to 25.0
D	35.1 to 55.0	25.1 to 35.0
E	55.1 to 80.0	35.1 to 50.0
F	≥ 80.1	≥ 50.1

Source: 2010 Highway Capacity Manual

4.3.3 *Roadway Segments*

Street segment analysis for streets is based upon the comparison of daily traffic volumes (ADTs) to the *Roadway Classification, Level of Service, and ADT*. The roadway capacities and levels of service are based on the Highway Capacity Manual (HCM6). This information is reproduced in ***Table 4–3*** below. This table provides segment capacities for various street classifications, based on traffic volumes and roadway characteristics.

TABLE 4–3
ROADWAY CAPACITY THRESHOLD TABLE

Configuration	LOS			
	B	C	D	E
2 Lane Undivided State Signalized Arterials	N/A	9,800	13,000	13,900
4 Lane Divided State Signalized Arterials	N/A	23,300	28,000	29,900
2 Lane Undivided	7,800	14,200	20,000	25,600
2 Lane Divided	8,190	14,910	21,000	26,880
4 Lane Undivided	17,850	27,900	36,000	40,950
4 Lane Divided	23,800	37,200	48,000	54,600
6 Lane Divided	35,600	55,800	72,000	82,000
4 Lane Freeway	37,100	49,900	59,400	63,700
6 Lane Freeway	54,800	74,600	89,000	98,300
8 Lane Freeway	74,200	99,800	118,800	127,400

4.3.4 *Ramp Merge/Diverge Sections*

Ramp merge/diverge ramp operations were analyzed under AM and PM peak hour conditions. Operational characteristics were reported utilizing the methodology found in Chapter 25 of the *2010 Highway Capacity Manual (HCM),* with the assistance of the *Highway Capacity Software* (version 6.6).

Levels of service in merge and diverge influence areas are defined in terms of density for all cases of stable operations (LOS A through E). However, LOS F exists when the demand exceeds the capacity of upstream or downstream freeway sections or the capacity of the ramp.

The ramp merge / diverge analyses are included in this report for informational purposes only.

5.0 SIGNIFICANCE CRITERIA

The Kern County *Standards for Traffic Engineering* and the Caltrans *Traffic Impact Study (TIA)* guidelines (see *Appendix A*) were reviewed and utilized as the basis for determining the significance criteria. In addition., other area CEQA traffic studies were reviewed. Based on these documents, LOS D or better operations was considered acceptable and LOS E/F operations were considered unacceptable.

Hence, a significant impact is calculated if the Project traffic causes the facility to degrade from acceptable (LOS D or better) to unacceptable (LOS E or F) operations. If the degradation occurs in the near-term, the impact is considered direct and if the degradation occurs in the long-term, the impact is considered cumulative.

Neither the County nor Caltrans has criteria for the amount of delay, v/c ratio, or speed that a project can add to a facility operating below standards (LOS E/F) in the pre-project condition. Therefore, the City of San Diego criteria was utilized (***Table 5-1***) for cases where pre-project LOS was LOS E or F. *Appendix A* contains the complete City of San Diego guidelines. These guidelines do not address ramp merge / diverge analyses. Therefore, the threshold for the Freeway Mainline analysis in the SANTEC / ITE guidelines was used for the analysis. This criteria states that a decrease in speed on the freeway mainline of 1 mph due to the Project is significant, as seen in *Table 5-1*.

In addition, on Page 5-68, the *2014 Regional Transportation Plan/Sustainable Communities Strategy*, Kern County Council of Governments states that:

> "Level of service E has been established as the minimum system-wide LOS traffic standard in the Kern COG Congestion Management Plan."

Figure 5-10 from this document is a map of Kern County "Congestion Management Program Corridors". The map shows that I-5, SR 99 and SR 166 (Maricopa Highway) as corridors where LOS E operations are acceptable.

TABLE 5-1
TRAFFIC IMPACT SIGNIFICANCE THRESHOLDS

Level of Service with Project [b]	Allowable Increase Due to Project Impacts [a]					
	Freeways		Roadway Segments		Intersections	Ramp Metering [c]
	V/C	Speed (mph)	V/C	Speed (mph)	Delay (sec.)	Delay (min.)
E	0.010	1.0	0.02	1.0	2.0	2.0
F	0.005	0.5	0.01	0.5	1.0	1.0

Footnotes:

a. If a proposed project's traffic causes the values shown in the table to be exceeded, the impacts are determined to be significant. The project applicant shall then identify feasible improvements (within the Traffic Impact Study) that will restore/and maintain the traffic facility at an acceptable LOS. If the LOS with the proposed project becomes unacceptable (see note b), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, the project applicant shall be responsible for mitigating the project's direct significant and/or cumulatively considerable traffic impacts.

b. All LOS measurements are based upon Highway Capacity Manual procedures for peak-hour conditions. However, V/C ratios for roadway segments are estimated on an ADT/24-hour traffic volume basis (using Table 2 of the City's Traffic Impact Study Manual). The acceptable LOS for freeways, roadways, and intersections is generally "D" ("C" for undeveloped locations). For metered freeway ramps, LOS does not apply. However, ramp meter delays above 15 minutes are considered excessive.

c. The allowable increase in delay at a ramp meter with more than 15 minutes delay and freeway LOS E is 2 minutes. The allowable increase in delay at a ramp meter with more than 15 minutes delay and freeway LOS F is 1 minute.

General Notes:

1. Delay = Average control delay per vehicle measured in seconds for intersections or minutes for ramp meters
2. LOS = Level of Service
3. V/C = Volume to Capacity ratio
4. Speed = Arterial speed measured in miles per hour

6.0 ANALYSIS OF EXISTING CONDITIONS

6.1 Peak Hour Intersection Levels of Service

Table 6-1 summarizes the Existing peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 6-1*, the minor street left-turn movements at all unsignalized intersections are calculated to currently operate at LOS B or better during the weekday and LOS C or better during the Saturday peak hours.

Appendix B contains the Existing Weekday and Saturday intersection analysis worksheets.

6.2 Daily Street Segment Levels of Service

Table 6-2 summarizes the Existing weekday segment operations. As seen in *Table 6-2*, all study area segments are calculated to currently operate at LOS C or better. ***Table 6-3*** summarizes the Existing Saturday segment operations. As seen in *Table 6-3*, all study area segments are calculated to currently operate at LOS C or better.

6.3 Ramp Merge Analysis

Table 6–4 summarizes the operations of the Ramp Merge sections under Existing Weekday scenario. As seen in *Table 6–4*, three of the four merge sections analyzed are calculated to currently operate at LOS D or better. The SR 166 to NB I-5 ramp merge is calculated to operate at LOS F during the PM peak hour.

Table 6–5 summarizes the operations of the Ramp Merge sections under Existing Saturday scenario. As seen in *Table 6–5*, two of the four merge sections analyzed are calculated to currently operate at LOS D or better. The following ramp diverge sections are calculated to operate at LOS E or F:

- SR 166 to SB I-5
- SR 166 to NB I-5

6.4 Ramp Diverge Analysis

Table 6–4 summarizes the operations of the Ramp Diverge sections under Existing Weekday scenario. As seen in *Table 6–4*, four of the five diverge sections analyzed are calculated to currently operate at LOS D or better. The NB I-5 to SR 166 ramp diverge is calculated to operate at LOS E during the PM peak hour. *Table 6–5* summarizes the operations of the Ramp Diverge sections under Existing Saturday scenario. As seen in *Table 6–5*, three of the five diverge sections analyzed are calculated to currently operate at LOS D or better. The following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 to SR 166
- NB I-5 to SR 166

Appendix B contains the Existing Weekday and Saturday Ramp Merge and Diverge Section analysis worksheets.

7.0 OPENING YEAR (2023) TRAFFIC VOLUMES

In order to forecast Opening Year (2023) volumes, research was conducted to identify planned developments in the vicinity of the project that would add traffic to the study area intersections and segments. The following potential projects were provided by Kern County:

7.1 Cumulative Projects

Following are brief descriptions of the cumulative projects including which projects are included in the Opening Year (2023) analysis and the reason(s) for the same.

TRANSPORTATION PROJECTS

The following Transportation projects are identified within the influence area of the Tejon Project. However, a review of these projects indicates that they will not add traffic to the Project study area intersections, roadway segments or Freeway Mainline segments.

1. **I-5 Freight Corridor California Aqueduct:** South of the I-5 south of the I-5/SR-99 interchange, this project will improve the load rating of the aqueduct bridge.
2. I**-5 Fast Freight Corridor I-5/SR-99 Separation:** At the I-5/SR-99 interchange, this project will improve the vertical clearance of the separation bridge along SR-99 by lowering SR-99 by approximately 8 inches on the northbound (NB) site and 12 inches on the southbound (SB) side to achieve the standard vertical clearance of 16 feet and 6 inches.
3. **Zero Emissions Vehicle Charging Project:** This project will install zero emissions vehicle charging stations on pre-developed paved parking lots, including at the El Tejon Park and Ride (SB) south of the I-5/SR-99 interchange.
4. **Panama and White Lane Vertical Clearance Improvements:** Located along SR-99 between Union Avenue and White Lane Overcrossing (between the Mettler Site and Bakersfield), this project will rehabilitate pavement and improve the vertical clearance of two overcrossings along SR-99.
5. **Kern 99 NB Rehabilitation:** Located on SR-99 between I-5 and the Panama Lake Overcrossing, this project will rehabilitate the NB lanes of SR-99 with reinforced concrete pavement to increase the pavement life and restore the structural integrity of the truck lane.
6. **SR-99/Taft Highway Rehabilitation:** Located on SR-99 from north of Herring Road to the Pacheco Road undercrossing, this project will rehabilitate the outside SB lane of SR-99 and repave the shoulder.
7. **Bakersfield 99 Rehabilitation Project:** Along SR-99 within Bakersfield, this project will rehabilitate lanes with reinforced concrete pavement, widen and reconstruct the shoulder, adjust slopes, compact soil, and remove vegetation.

8. **California Aqueduct Bridge Replacement:** This project will replace the bridge along SR-166 located east of Maricopa and 5 miles west of I-5.
9. **Enos Lane CAPM and ADA Ramps Project:** This project will resurface pavement, replace guardrails, update curb ramps, and apply shoulder backing to SR-43 between SR-119 (Taft Highway) and SR-58.
10. **Manor Street Bridge Rehabilitation and Seismic Retrofit Project:** This project will rehabilitate, widen, and retrofit the Manor Street Bridge over the Kern River in the City of Bakersfield.
11. **Centennial Corridor:** This project will construct the Centennial Corridor as an east-west transportation corridor for SR-58 to provide route continuity with I-5. This will require bride widening, pipeline relocation, and work on three existing bridges.
12. **Accelerated Pavement Failure Repairs:** This project will remove/replace hot mix asphalt along I-5.
13. **Kern River Parkway Bike Trail Western Extension:** This project will construct 7 miles of bike path from the existing trail to the Buena Vista Recreational Area.

DEVELOPMENT PROJECTS

Kern County

The following projects are identified in Kern County to potentially be included as cumulative projects in the analysis.

1. The Recology Blossom Valley Organics South Project, is a public utilities project consisting of expanding an existing compost facility with 7 additional acres to a total of 197 acres, located approximately 9 miles north of the two alternative project sites.

   This project is not expected to add traffic to the Project study area intersections and is not included in the analysis.

2. The **San Emido Quarry Expansion** Project is a Mining project consisting of expanding a quarry by 3,209 acres to a total of 4,011 acres and is located approximately 10 miles west of the two alternative project sites.

   *This project is located along SR 166, one of the access roadways to the Project site and is expected to add traffic to the Project study area intersections. Hence it **is included** in the analysis.*

3. The **Grapevine Specific and Community Plan** is a Mixed-Use project consisting of 12,000 residences; 10,748,400 SF of commercial development on 8,010 acres and is approximately located 6 miles south of the two alternative project sites.

   *This project is expected to add traffic to I-5 and SR 99. Hence it **is included** in the analysis.*

City of Bakersfield

The following projects are identified in the City of Bakersfield to potentially be included as cumulative projects in the analysis.

1. **The Bakersfield Commons** project is a Mixed-Use project with 1,400,000 SF of retail commercial, 600,000 SF of office commercial, 345 multi-family residences, 80 single- family residences on a total of 255 acres, located approximately 22 miles north of the two alternative project sites.

   *This project is expected to add traffic to I-5 and SR 99. Hence it **is included** in the analysis.*

2. **Making Downtown Bakersfield Vision Plan** is a Mixed-Use development with 2,005,000 SF office, 8,750 residences, 906,000 retail, 2,400 hotel rooms, a high-speed rail station, located approximately 21 miles north of the two alternative project sites.

   *This project is expected to add traffic to I-5 and SR 99. Hence it **is included** in the analysis.*

3. The **Kern River Flow and Municipal Water Program** is a Public Utilities project to increase and enhance the City's water supply. This project is located approximately 21 miles north of the two alternative project sites.

   *This project is not expected to generate much traffic when completed. Also, this project is therefore **not** expected to add traffic to the Project study area intersections. Hence, this project is not included in the analysis.*

4. The **SR-99/Hosking Commercial Center** project is a Commercial project, including 800,000 SF retail, 240 hotel rooms on 85 acres, located approximately 14 miles north of the two alternative project sites.

   *This project is expected to add traffic to I-5 and SR 99. Hence it **is included** in the analysis.*

5. The **Moran Development GPA/Zone Change** is a Residential project with 613 residences on 38 acres, located approximately 16 miles north of the two alternative project sites.

   *This project is not expected to add traffic to the Project study area intersections and is therefore **not** included in the analysis.*

6. The Norris School District plans to build a **new elementary school** for 750 K-6 students. The School will include a 60,000-70,000 SF building on 16 acres, located greater than 20 miles north of the two alternative project sites.

   *This project is not expected to add traffic to the Project study area intersections and is therefore **not** included in the analysis.*

7. The Aurora Program plans to build a **new K-8 school** for 120 students for behavioral and mental health support services in a 38,500 SF building, located approximately 21 miles north of the two alternative project sites.

*This project is local serving and hence, is not expected to add traffic to the Project study area intersections and is therefore **not** included in the analysis.*

8. **A GPA/Zone Change** is proposed at SR-99 and Ashe Road for a 61,855 SF retail commercial Building on 5.68 acres, located approximately 14 miles north of the two alternative project sites.

   *This project is local serving and hence, is not expected to add traffic to the Project study area intersections and is therefore **not** included in the analysis.*

7.2 Background Growth

In addition to the cumulative projects listed above, a growth factor was applied to the existing traffic to account for any future development projects not yet known at this time. A growth of 2% per year for five (5) years from 2018 to 2023, was applied.

Figure 7–1 depicts the Opening Year (2023) Without Project Traffic Volumes for the Weekday, while ***Figure 7–2*** depicts the Opening Year (2023) Without Project Traffic Volumes on a Saturday.

8.0 TRIP GENERATION RATES

The Institute of Transportation Engineers (ITE) *Trip Generation* Manual typically used to determine trip generation rates for various types of land uses. However, standard rates for Indian gaming casinos are not available in this manual. Therefore, trip generation rates was developed by LLG as explained below.

8.1 Casino

LLG Engineers previously developed a site-specific trip generation rate for a traffic study for similar casino in Amador County, California. That trip generation rate is proposed for use in the Tejon Casino traffic study. The methodology used to develop trip generation rates in that previous study is as follows:

Based on a review of several existing Indian Gaming Casinos, a list of three casinos was developed that are similar to the Proposed Project. Traffic counts were performed for multiple days at each of the following casinos:

- Harrah's Rincon Casino (Valley Center, San Diego County)
- Chukchansi Gold Casino (Madera County)
- Black Oak Casino (Tuolomne County)

Table 8-1 is a comparison of the various features provided at the three above casinos and the proposed Tejon Casino. The three casinos are each located in rural areas. Access to all these casinos is on two-lane roads. Based on trip generation analysis used to develop trip generation rates for other casinos, it has been determined that the gaming floor area (GFA) is a better predictor of vehicular trips than the total project area or the gaming positions. Therefore, the trip generation rates for the Proposed Project is determined based on the GFA.

As seen in *Table 8-1*, two of the three casinos where counts were conducted have event venues and all three have meeting rooms and restaurants. The observed trips include trips generated by the events venues and the meeting rooms. Trip rates calculated using these counts include the trips generated by the meeting rooms, restaurants and event venues. Hence, separate trip rates for the meeting rooms / restaurants / event venues are not required.

8.1.1 *Methodology to Determine Trip Generation for Casinos*

As mentioned above, The ITE *Trip Generation* Manual does not have trip rates for Casinos on Indian reservations. Trip rates for Casinos adjacent to freeways are not available. LLG conducted trip generation studies at the three casinos mentioned in the traffic study and obtained the trip generation data. An exact representation of the proposed Project is not available. The closest available is used.

While the proposed project is larger than the casinos where counts were conducted, with the fitted curve equation, the larger the size of the project, the lower the trip rate. Hence, the fitted curve equation is representative of the trip rates. These casinos were well established when counts were conducted. The facilities listed for each of the casinos were built at that time. We expect the traffic volumes to be representative.

Traffic counts were conducted for a period of seven days at two of the three existing casinos and for five days at the Chuckchansi Gold Casino. These counts were used to determine a trip generation rate. The methodology used to determine the weekday and Saturday daily and peak hour trip generation rates is detailed below. Counts were conducted at the Harrah's Rincon Casino between January 23rd through the 29th, 2006, the Chukchansi Gold Casino between August 4th through the 8th, 2005 and the Black Oak Casino between February 4th through the 10th, 2006.

TABLE 8-1
COMPARISON OF CASINOS

Description	Harrah's Rincon Casino	Chukchansi Gold Casino	Black Oak Casino	Tejon Casino
Location (County)	Valley Center, San Diego County, CA	Coarsegold, CA	Tuolumne, CA	Kern County
Major Access	Interstate 15 to SR 76	Interstate 5 to SR 41	Interstate 5 to SR 120	SR 99 to Maricopa Hwy (SR 166)
Gaming Area	59,000 SF	56,000 SF	43,000 SF	166,500 SF
Hotel	653 Rooms	200 Rooms	-	400 Rooms
Gaming Positions				
Slot Machines	1,600	1,800	1,000	
Card Tables	50	47	24	
Facilities				
Restaurants	7	7	4	6
Food Court	0	0	0	1
Bars	2	0	4	2
Buffet	0	0	0	1
Lounge	0	0	1	1
Pavilion	0	0	0	0
Spa	0	0	0	1 (16,000 SF)
Meeting Rooms	8	3	0	5 (53,000 SF)
Events Venue	Yes	Yes	No	Yes

8.1.2 *Calculating the Trip Generation Rates for the Existing Casinos*

Weekday

The weekday (Monday through Friday) daily traffic volumes were plotted versus the gaming area square footages (SF) for the three casinos and a fitted curve and equation was determined (***Chart 1***). As seen on *Chart 1*, the weekday daily trip generation rate is as follows:

> y = 2,666.1 Ln(x) – 5,464, where y = weekday Daily Traffic Volume, and x = Gaming Area in 1,000 SF.

Similarly, the weekday PM peak hour traffic volumes (generally 5:00 PM to 6:00 PM) on Mondays through Fridays at each of the casinos were plotted versus the gaming areas on ***Chart 2***. As seen on *Chart 2*, the weekday PM peak hour trip generation rate is as follows:

> = 318.37 Ln(x) – 921.31 where y = weekday PM Peak Hour Volume, and x = Gaming Area in 1,000 SF.

Saturday

The daily Saturday (Saturday and Sunday) traffic volumes were plotted versus the gaming area square footages (SF) for the three casinos and a fitted curve and equation was determined (***Chart 3***). As seen on Chart 3, the Saturday daily trip generation rate is as follows:

> y = 5159.1 Ln(x) - 12844, where y = Saturday Daily Traffic Volume, and x = Gaming Area in 1,000 SF.

Similarly, the Saturday peak hour traffic volumes (generally 12:00 Noon to 1:00 PM) on the Saturday at each of the casinos were plotted versus the gaming areas on ***Chart 4***. As seen on *Chart 4*, Saturday peak hour trip generation rate is as follows:

> y = 448.1 Ln(x) - 1374, where y = the Saturday PM peak hour volume, and x = Gaming Area in 1,000 SF.

Table 8-2 summarizes the calculated average Weekday and Saturday trip generation rates at the three casinos where traffic data was obtained. As seen in *Table 8-2*, the weekday daily rates are calculated to vary between 87.85 and 111.23 trips per 1,000 SF while the weekday PM peak hour rate is calculated to vary between 6.37 and 6.97 trips per 1,000 SF. The Saturday daily rates are calculated to vary between 130.81 and 160.84 trips per 1,000 SF while the Saturday peak hour rate is calculated to vary between 9.14 and 10.25 trips per 1,000 SF.

Table 8-3 summarizes the various trip generation rates for the weekday and Saturday, used to estimate the trip generation for the Tejon Casino.

The Casino is located adjacent to two freeways, I-5 and SR 99 which, together carry approximately 90,000 vehicles per day. Diverted link trips will be generated from the existing traffic on both, I-5 and SR 99. For the purposes of this analysis, the base daily and peak hour trip generation estimates are adjusted based on a conservative diverted link rate of 10%, which is less than the 15% identified by Caltrans' guidance for pass-by/diverted link trip reductions for retail-oriented development in the *Caltrans Guide for the Preparation of Traffic Impact Studies*, 2002. Since the average traffic volumes on the surface streets adjacent to the project site are low, no Diverted Link reductions are applied to the casino trip generation estimates.

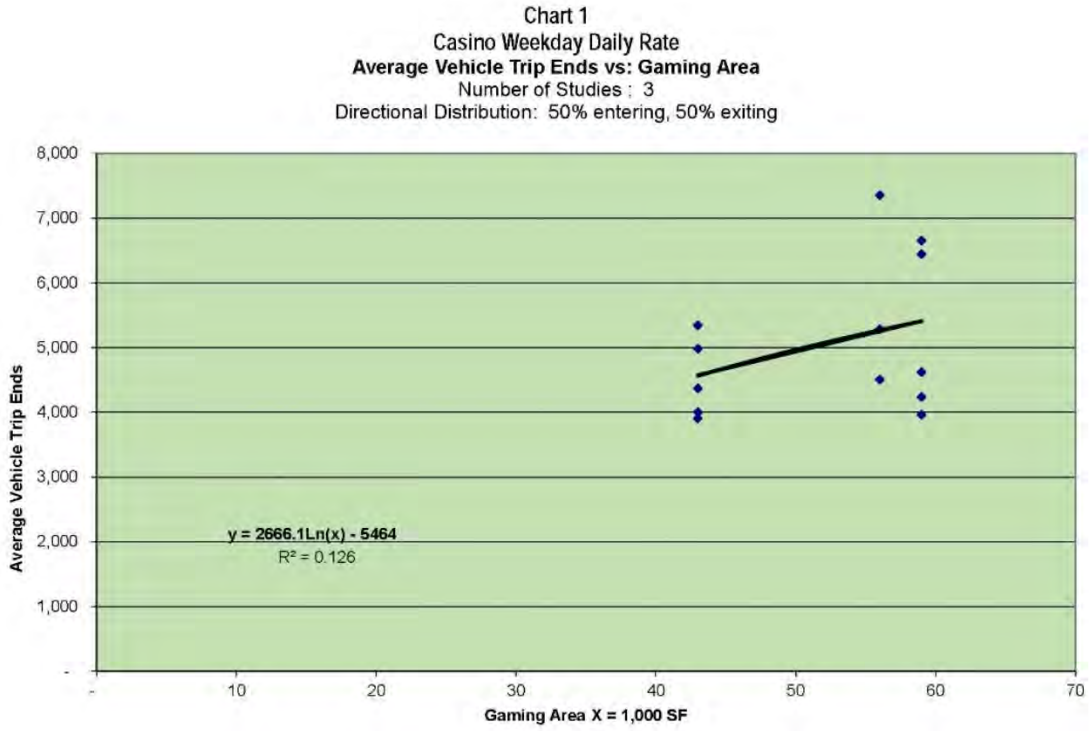

Chart 2
Casino Weekday Peak Hour
Average Vehicle Trip Ends vs: Gaming Area
PM Peak Hour of the Adjacent Street
Number of Studies : 3
Directional Distribution: 55% entering, 45% exiting

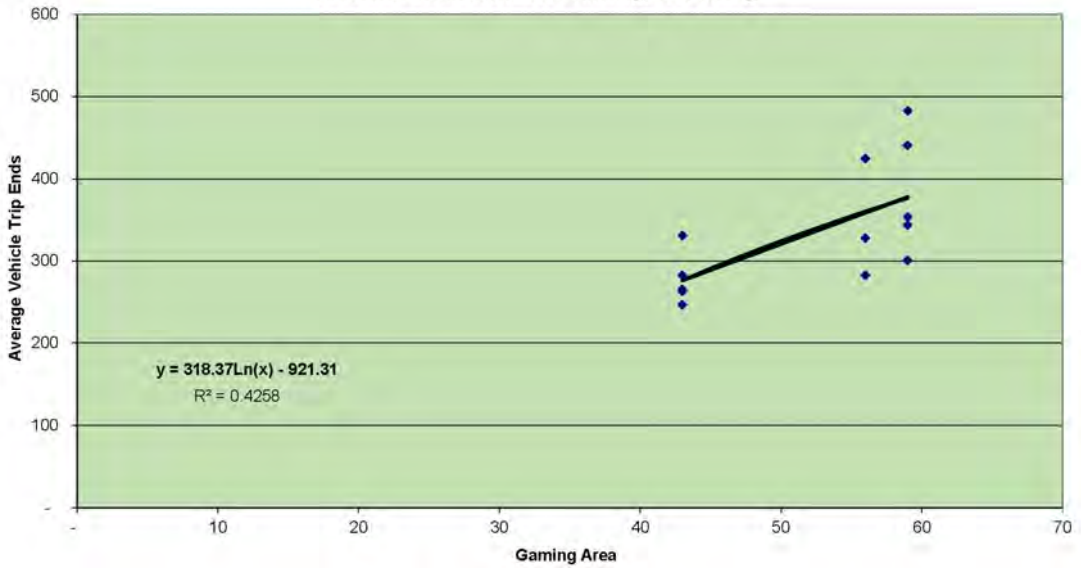

Chart 3
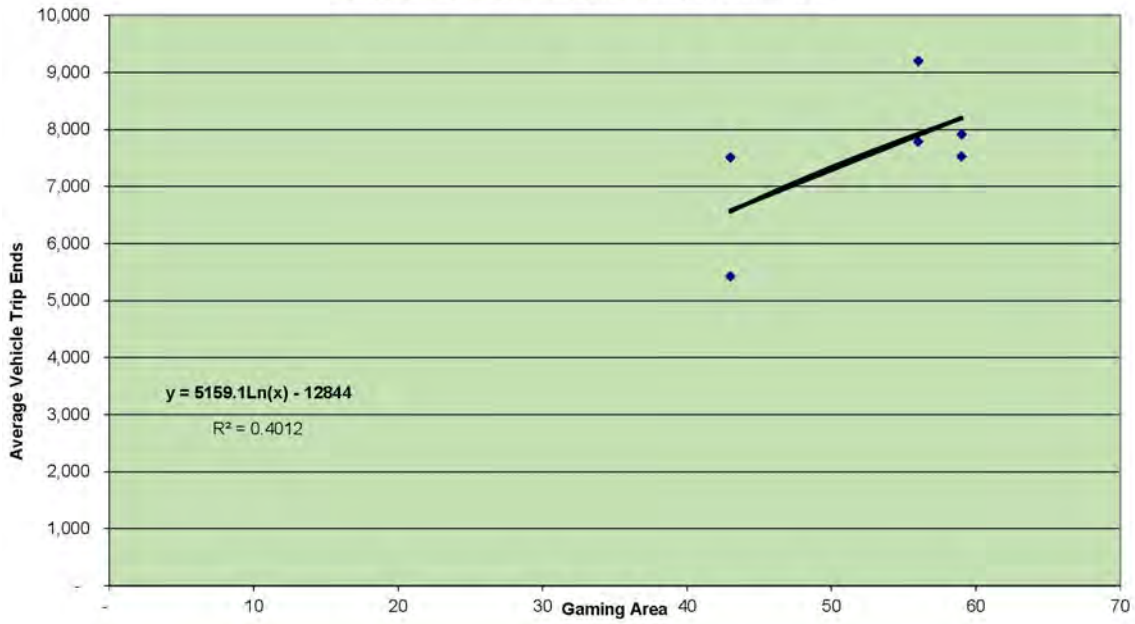
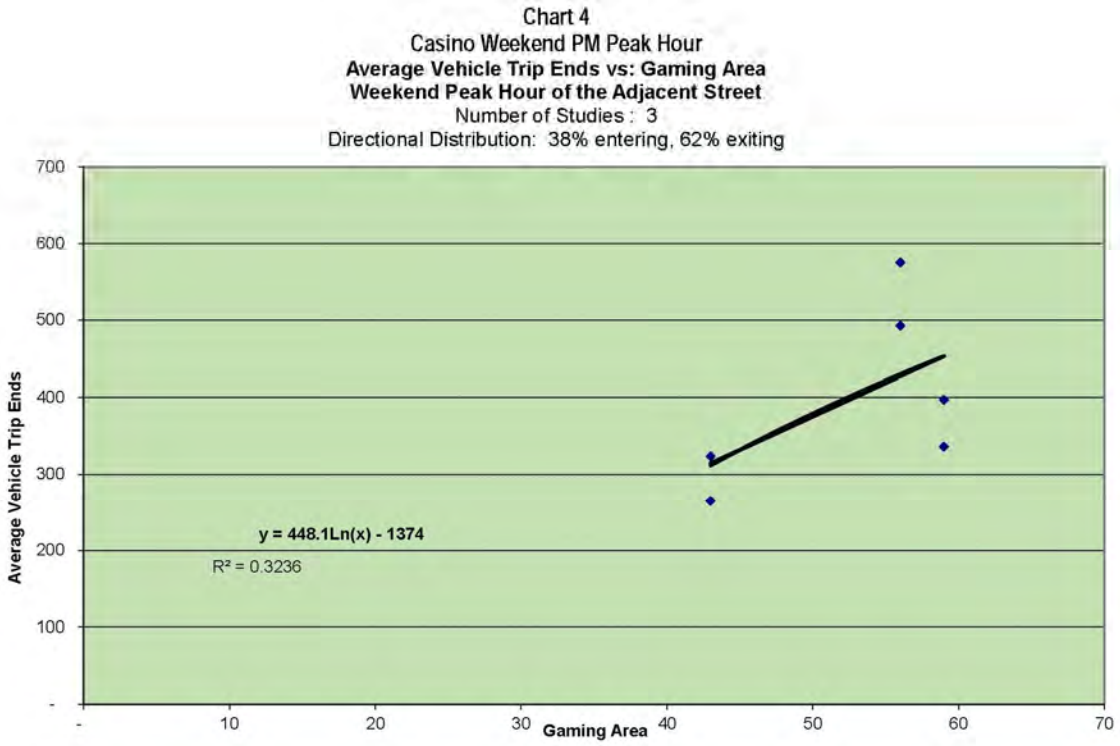
Weekend Daily Rate
Average Vehicle Trip Ends vs: Gaming Area
Number of Studies : 3
Directional Distribution: 50% entering, 50% exiting





8.2 Hotel

Unlike stand-alone hotels, guests of the Indian casino hotels are primarily attracted by the casino facilities, and the hotel facilities are a secondary attraction. Hence, the trip generation rates are lower than those for a stand-alone hotel. The *Traffic Needs Assessment of Tribal Development Projects in the San Diego Region* – March 2003 Update, by the San Diego Association of Governments (SANDAG) recommends a daily trip rate of 3 trips per occupied room for hotels. The rates used are as follows:

Weekday

- Daily – 3 per room
- AM Peak Hour – 5.62% of daily
- PM Peak Hour – 7.18% of daily

Saturday

- Daily – 3 per room
- PM Peak Hour – 8.41% of daily

TABLE 8-2
TRIP GENERATION RATE COMPARISON

Casino	Weekday (Average of Monday through Friday)				Saturday			
	Daily		PM Peak Hour		Daily		Peak Hour	
	ADT	Rate[a]	Volume	Rate [a]	ADT	Rate[a]	Volume	Rate[a]
Harrah's Rincon Casino	5,183	87.85	411	6.97	7,718	130.81	591	10.02
Chukchansi Gold, Madera County	6,229	111.23	385	6.88	9,007	160.84	574	10.25
Black Oak Casino, Tuolumne County	4,109	95.56	274	6.37	5,879	136.72	393	9.14

Footnote:

a. Per 1,000 SF of gaming area.

TABLE 8-3
TRIP GENERATION EQUATIONS

Casino	Daily Rate (Equation)	PM Peak Hour Rate (Equation)
Weekday	y = 2666.1Ln(x) – 5464	y = 318.37Ln(x) – 921.31
Saturday	y = 5159.1Ln(x) - 12844	y = 448.1Ln(x) -1374

8.3 R. V. Parking

Weekday trip rates for Land Use 416 Campground / Recreational Vehicle Park, from the 10th Edition of the *Trip Generation* Manual, Institute of Transportation Engineers (ITE) is used. Daily trip rates are not available. Hence, the daily rips were estimated based on the assumption that peak hour volumes are 10% of the daily trips. Thus, the daily trips were calculated using the average of the AM and PM peak hour volumes. Saturday trip rates are not available for RV park. The weekday PM peak hour rates were used for the Saturday peak hour. Saturday daily volume was calculated based on the assumption that peak hour volumes are 10% of the daily trips. The rates used are as follows:

Weekday

- Daily – 7.5 trips per acre (calculated)
- AM Peak Hour – 0.48 trips per acre
- PM Peak Hour – 0.98 trips per acre

Saturday

- Daily – 10 trips per acre (calculated)
- PM Peak Hour – 0.98 trips per acre

8.4 Organic Farm

Weekday rates for Organic Farm are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use. Saturday trip rates are not available for Organic Farm. The weekday daily rate is used for Saturday. For the peak hour, 5% is used for the Saturday. The rates used are as follows:

Weekday

- Daily – 2 trips per acre
- AM Peak Hour – 10% of daily
- PM Peak Hour – 10% of daily

Saturday

- Daily – 2 trips per acre
- PM Peak Hour – 5% of daily

8.5 Single Family Homes

The weekday and Saturday trip rates for Land Use 210, *Trip Generation* Manual, 10th Edition, ITE are used for Single Family Homes. The rates used are as follows:

Weekday

- Daily - Ln(T) = 0.92 Ln(X) + 2.71, where T = total number of daily weekday trips and X is the number of single-family dwelling units.
- AM Peak Hour - T = 0.71(X) + 4.80, where T = total number of weekday AM peak hour trips and X is the number of single-family dwelling units.
- PM Peak Hour: Ln (T) = 0.96 Ln (X) + 0.20, where T = total number of weekday PM peak hour trips and X is the number of single-family dwelling units.

Saturday

- Daily - Ln(T) = 0.94 Ln(X) + 2.56, where T = total number of daily Saturday trips and X is the number of single-family dwelling units.
- Peak Hour: T = 0.84(X) + 17.99, where T = total number of Saturday peak hour trips and X is the number of single-family dwelling units.

8.6 Community Park

The weekday and Saturday trip rates for Community Park, Land Use 411, *Trip Generation* Manual, 10th Edition, ITE is used for Community Park. The rates in the *Trip Generation* Manual are considered too low and based on engineering judgement, the rate was adjusted. The rates used are as follows:

Weekday

- Daily – 7.8 per acre
- AM Peak Hour – 0.2 per acre
- PM Peak Hour – 1.1 per acre

Saturday

- Daily – 19.6 per acre
- PM Peak Hour – 1.1 per acre

8.7 Community Center

The weekday and Saturday trip rates for Recreational Community Center, Land Use 495, *Trip Generation* Manual, 10th Edition, ITE is used for Community Center. The community center is meant for the use of tribal members and members of the general public will not use generally this center. Hence the rates in the *Trip Generation* Manual are considered high. Therefore, 50% of the rate is used. The rates used are as follows:

Weekday

- Daily – 14.41 per KSF
- AM Peak Hour – 0.88 per KSF
- PM Peak Hour – 1.16 per KSF

Saturday

- Daily – 4.55 per acre
- PM Peak Hour – 0.54 per acre

8.8 Health Center

The weekday and Saturday trip rates for Medical-Dental office, Land Use 720, *Trip Generation* Manual, 10th Edition, ITE is used for Health Center. The Health Center is meant for the use of tribal members and members of the general public will not generally use this center. Hence the rates in the *Trip Generation* Manual are considered high. Therefore, 50% of the rate is used. The rates used are as follows:

Weekday

- Daily – 17.4 KSF
- AM Peak Hour – 1.39 per KSF
- PM Peak Hour – 1.73 per KSF

Saturday

- Daily – 4.285 per KSF
- PM Peak Hour – 1.55 per KSF

8.9 Tribal Administration

The weekday trip rates for Small Office building Land Use 712, *Trip Generation* Manual, 10th Edition, ITE is used for the Tribal Administration office. The Tribal Administration office is meant for the use of tribal members and members of the general public will not generally use this center. The tribal membership is small, approximately 900 members, which would be an equivalent of approximately 300 families. It may be noted that most members (families) would not visit the Tribal Administration office every day. Hence the rates in the *Trip Generation* Manual are considered high. Therefore, 50% of the rate is used. It is assumed that the tribal office will remain closed during the Saturday and hence no trips will be generated. The rates used are as follows:

Weekday

- Daily – per 8.095 KSF
- AM Peak Hour – 0.96 per KSF
- PM Peak Hour – 1.23 per KSF

8.10 County Fire / Sheriff Station

Trip rates for a sheriff station is not available. ITE provides only a weekday PM peak hour trip rate for a fire station. However, no daily rates are provided.

ALTERNATIVE A1

9.0 ALTERNATIVE A1 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

9.1 Trip Generation

Using the trip generation rates described in Section 8.0, Trip Generation Methodology, Weekday and Saturday trip generation was estimated for Alternative A1 as described below.

9.1.1 *Weekday*

Alternative A1 is planned to be developed in two Phases. ***Table 9-1*** summarizes the Alternative A1 Weekday trip generation. As seen in *Table 9-1*, in Phase 1 the proposed land uses in Alternative A1 are estimated to generate a total of 9,538 daily trips, with 502 AM peak hour trips (312 inbound / 190 outbound) and 815 PM peak hour trips (448 inbound / 367 outbound) during the weekdays. The casino is calculated to generate 817 daily *diverted link* trips with 42 AM peak hour trips (27 inbound / 16 outbound) and 71 PM peak hour trips (39 inbound / 32 outbound). The entire Alternative A1 land uses are estimated to generate a total of 12,885 daily trips, with 741 AM peak hour trips (458 inbound / 283 outbound) and 1,153 PM peak hour trips (593 inbound / 560 outbound) during the weekdays.

9.1.2 *Saturday*

Table 9-2 summarizes the Alternative A1 Saturday trip generation. As seen in *Table 9-2*, In Phase 1, the Alternative A1 land uses are estimated to generate a total of 14,965 daily trips, with 1,041 PM peak hour trips (416 inbound / 625 outbound) during the Saturday. The casino is calculated to generate 1,355 daily *diverted link* trips with 92 PM peak hour trips (35 inbound / 57 outbound).

The entire Alternative A1 land uses are estimated to generate a total of 17,020 daily Saturday trips, with 1,324 PM peak hour trips (565 inbound / 759 outbound) during the Saturday.

9.2 Trip Distribution/Assignment

The Proposed Alternative A1 site is well connected (accessed) from both I-5 and SR 99. There is little to no local traffic on the surface roadway network. Most of the traffic that will patronize the Casino is regional in nature and will utilize SR 99 and I-5 freeways to access the site. The Los Angeles Metropolitan area is located approximately 100 miles to the south and there are several smaller cities/population centers within 100 miles to the north of the Project. Hence it was assumed that 50% of the Project traffic would be oriented to the north and the remaining 50% to the south. The Project site is closer to SR 99, which is a 6-lane freeway, whereas, I-5 is a 4-Lane freeway. Hence, it is assumed that more project traffic from the south will utilize SR 99 than I-5.

Based on the above discussion, it is assumed that 50% of the Project traffic is oriented to the north, 25% each on I-5 and SR 99, 35% is oriented to the south on SR 99, 10% is to the south on I-5 and 5% to the west on Maricopa Highway.

Figure 9–1 depicts the Alternative A1 Project Traffic Distribution. ***Figure 9–2*** depicts the Alternative A1 Weekday Project Phase 1 Traffic Volumes, while ***Figure 9–3*** depicts the Alternative A1 Saturday Project Phase 1 Traffic Volumes. ***Figure 9–4*** depicts the Alternative A1 Weekday Entire Project Traffic Volumes, while ***Figure 9–5*** depicts the Alternative A1 Saturday Entire Project Traffic Volumes. ***Figure 9–6*** depicts the Existing + Alternative A1 Weekday Project Phase 1 Traffic Volumes. ***Figure 9–7*** depicts the Existing + Alternative A1 Saturday Project Phase 1 Traffic Volumes. ***Figure 9–8*** depicts the Opening Year (2023) + Alternative A1 Weekday Project Phase 1 Traffic Volumes, while ***Figure 9–9*** depicts the Opening Year (2023) + Alternative A1 Saturday Project Phase 1 Traffic Volumes.

TABLE 9-1
ALTERNATIVE A1 - WEEKDAY TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)		Weekday AM Peak Hour					Weekday PM Peak Hour				
		Rate [a]	Volume	Rate	In:Out Split [a]	Volume			Rate	In:Out Split	Volume

22
963
63

Footnotes:

a. Casino Gaming Area: Weekday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 2666.1 Ln(x) - 5464; PM Rate: y = 318.37 Ln (x) - 921.31. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the KSF.

b. Diverted link trips are generated by the Casino only. Diverted Link trip reduction is applied only to the freeway traffic volumes since they will utilize the ramps and the study area intersections.

c. Hotel: The weekday rates are based on the rates in the *Traffic Needs Assessment of Tribal Development Projects in the San Diego Region*- March 2003 Update, San Diego County.

d. RV Parking: Weekday trip rates for Land Use 416 Campground / Recreational Vehicle Park, ITE is used. Daily trip rates are not available. Hence, the daily rips were estimated assuming the peak hour volumes are 10% of the daily trips. Rates shown are average rates calculated by dividing the volume by the KSF.

e. Organic Farm: Weekday rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

f. Single Family Home: Weekday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, ITE. Daily Rate: Ln(T) = 0.92 Ln(X) + 2.71; AM Peak Hour: T = 0.71(X) + 4.80; and PM Peak Hour: Ln (T) = 0.96 Ln (X) + 0.20. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

g. Community Park: 10 times the weekday rates are for Community Park, Land Use 411, *Trip Generation Manual,* 10th Edition, *ITE* are applied.

h. Community Center: Weekday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

i. Health Center: Weekday trip rates for Medical-Dental office, Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

j. Tribal Administration: Since this Tribal office is meant for only tribe members, 50% of the weekday trip rates for Small Office building Land Use 712, Trip Generation Manual, 10th Edition, ITE is used.

TABLE 9-2

Footnotes:

a. Casino Gaming Area: Saturday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 5159.1 Ln(x) - 12844; PM Rate: y = 448.1 Ln (x) - 1374. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the KSF.

b. Diverted link trips are generated by the Casino and hotel only. Diverted link trip reduction is applied only to the freeway traffic volumes.

c. Hotel: The Saturday rates are based on the rates in the San Diego County Casino study. Peak hour rates are based on Hotel, Land Use 310, Trip Generation Manual, 10th Edition, Institute of Transportation Engineers (ITE). The peak hour split is not available and was assumed.

d. RV Parking: Saturday trip rates are not available and hence, weekday PM trip rates for Land Use 416 Campground / Recreational Vehicle Park is used. Daily trip rates are not available. Hence, the daily rips were estimated assuming the peak hour volumes are 10% of the daily trips. Rates shown are average rates calculated by dividing the volume by the KSF.

e. Organic Farm: Rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

f. Single Family Homes: Saturday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, (ITE). Daily Rate: Ln(T) = 0.94 Ln(X) + 2.56; Peak Hour: T = 0.84(X) + 17.99. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

g. Community Park: Saturday rates are based on Public Park, Land Use 411, *Trip Generation Manual*, 10th Edition, (ITE). The ITE trip rates are very low and hence were increased by 10 times.

h. Community Center: Saturday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

i. Health Center: Saturday trip rates for Medical-Dental office Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

j. Tribal Administration: This office is assumed to be closed during the Saturday.

10.0 ANALYSIS OF NEAR-TERM SCENARIOS – ALTERNATIVE A1

10.1 Existing + Project Alternative A1 Phase 1

10.1.1 *Intersection Analysis*

Table 10-1 summarizes the Existing + Project Alternative A1 Phase 1 peak hour intersection operations during the Weekday peak hours and the Saturday peak hour. As seen in *Table 10-1*, with the addition of Project Alternative A1 Phase 1 traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS E or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the Weekday PM peak hour and Saturday peak hour)
- Stevens Drive / Maricopa Highway (LOS E during the Saturday peak hour)

The Project has a direct impact at this intersection in Alternative A1.

Appendix C contains the Existing + Project Alternative A1 Phase 1 Weekday and Saturday intersection analysis worksheets.

10.1.2 *Daily Street Segment Levels of Service*

Table 10-2 summarizes the Existing + Project Alternative A1 Phase 1 Weekday segment operations. As seen in *Table 10-2*, with the addition of Project Alternative A1 Phase 1 traffic, all study area segments are calculated to operate at LOS C or better on a Weekday.

Table 10-3 summarizes the Existing + Project Alternative A1 Phase 1 Saturday segment operations. As seen in *Table 10-3*, with the addition of Project Alternative A1 Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday.

10.1.3 Ramp Merge Analysis

Table 10–4 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative A1 Phase 1 Weekday scenario. As seen in *Table 10–4*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge section is calculated to operate at LOS E:

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 10–5 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative A1 Phase 1 Saturday scenario. As seen in *Table 10–5*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

10.1.4 Ramp Diverge Analysis

Table 10–4 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative A1 Phase 1 Weekday scenario. As seen in *Table 10–4*, with the addition of Project Alternative A1 Phase 1 traffic, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or worse:

- NB I-5 off ramp diverge to SR 166 ramp (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 10–5 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative A1 Phase 1 Saturday scenario. As seen in *Table 10–5*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Appendix C contains the Existing + Project Alternative A1 Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

10.2 Opening Year (2023) without Project

10.2.1 *Intersection Analysis*

Table 10-1 summarizes the Opening Year (2023) without Project peak hour intersection operations during the Weekday peak hours and the Saturday peak hour. As seen in *Table 10-1*, in the near-Term without Project traffic, the minor street left-turn movements at all unsignalized intersections are calculated to continue to operate at LOS D or better on a Weekday and LOS C or better on a Saturday.

Appendix D contains the Opening Year (2023) without Project Weekday and Saturday intersection analysis worksheets.

10.2.2 *Daily Street Segment Levels of Service*

Table 10-2 summarizes the Opening Year (2023) without Project Weekday segment operations. As seen in *Table 10-2*, in the near-Term without Project traffic, all study area segments are calculated to operate at LOS C or better on a Weekday.

Table 10-3 summarizes the Opening Year (2023) without Project Saturday segment operations. As seen in *Table 10-3*, in the near-Term without Project traffic, all study area segments are calculated to operate at LOS D or better on a Saturday:

The Project has no significant direct impact on this freeway segment in Alternative A1.

10.2.3 *Ramp Merge Analysis*

Table 10–6 summarizes the operations of the Ramp Merge sections under Opening Year (2023) without Project Weekday scenario. As seen in *Table 10–6*, the following ramp merge section is calculated to operate at LOS F:

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour)

Table 10–7 summarizes the operations of the Ramp Merge sections under Opening Year (2023) without Project Saturday scenario. As seen in *Table 10–7*, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour)

10.2.4 *Ramp Diverge Analysis*

Table 10–6 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) without Project Weekday scenario. As seen in *Table 10–6*, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour)
- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour)

Table 10–7 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) without Project Saturday scenario. As seen in *Table 10–7*, the following ramp diverge sections are calculated to operate at LOS F:

- SB SR 99 off ramp diverge to Valpredo Avenue (LOS F during the PM peak hour)
- SB I-5 off ramp diverge to SR 166 (LOS F during the PM peak hour)
- NB I-5 off ramp diverge to SR 166 (LOS F during the PM peak hour)

Appendix D contains the Opening Year (2023) without Project Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

10.3 Opening Year (2023) + Project Phase 1

10.3.1 *Intersection Analysis*

Table 10-1 summarizes the Opening Year (2023) + Project Alternative A1 Phase 1 peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 10-1*, with the addition of Project Alternative A1 Phase 1 traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS D or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the Weekday AM and PM peak hours and Saturday peak hour)

- Stevens Drive / Maricopa Highway (LOS F during the Saturday peak hour)

The Project has a direct impact at these intersections in Alternative A1.

Appendix E contains the Opening Year (2023) + Project Alternative A1 Phase 1 Weekday and Saturday intersection analysis worksheets.

10.3.2 *Daily Street Segment Levels of Service*

Table 10-2 summarizes the Opening Year (2023) + Project Alternative A1 Phase 1 Weekday segment operations. As seen in *Table 10-2*, with the addition of Project Alternative A1 Phase 1 traffic, all study area segments are calculated to operate at LOS C or better on a Weekday.

Table 10-3 summarizes the Opening Year (2023) + Project Alternative A1 Phase 1 Saturday segment operations. As seen in *Table 10-3*, with the addition of Project Alternative A1 Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday.

10.3.3 *Ramp Merge Analysis*

Table 10–8 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative A1 Phase 1 Weekday scenario. As seen in *Table 10–8*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 10–9 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative A1 Phase 1 Saturday scenario. As seen in *Table 10–9*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB SR 99 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

10.3.4 *Ramp Diverge Analysis*

Table 10–8 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative A1 Phase 1 Weekday scenario. As seen in *Table 10–8*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 10–9 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative A1 Phase 1 Saturday scenario. As seen in *Table 10–9*, with the addition of Project Alternative A1 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SB SR 99 off Ramp diverge to Valpredo Avenue (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- SB I-5 off Ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off Ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Appendix E contains the Opening Year (2023) + Project Alternative A1 Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

11.0 ANALYSIS OF LONG-TERM (YEAR 2040) SCENARIOS – ALTERNATIVE A1

11.1 Year 2040 Traffic Volumes

Long-Term traffic volumes for the Study area intersections and segments are not available. Hence, a growth factor was applied to the Near-Term volumes to forecast future volumes. Growth factors are determined using historical traffic volumes. Based on the historical growth of traffic on the surrounding roadways, SR 99 and I-5, a 1% per annum growth factor was applied to the Opening Year (2023) volumes to obtain the Year 2040 without Project traffic volumes, based on LLG's vast experience in conducting traffic studies. The Project Traffic volumes were then added to obtain the Year 2040 + Project traffic volumes.

Figure 11-1 depicts the Year 2040 without Project traffic volumes, while ***Figure 11-2*** depicts the Year 2040 with Alternative A1 Entire Project traffic volumes.

11.2 Year 2040 without Project Analysis

11.2.1 *Intersection Analysis*

Table 11-1 summarizes the Long-Term (Year 2040) without Project peak hour intersection operations during the weekday peak hours. As seen in *Table 11-1*, in the Year 2040 without Project traffic, the minor street left-turn movements at all unsignalized intersections are calculated to continue to operate at LOS C or better except the following:

- Maricopa Highway / I-5 NB Ramps (LOS E during the AM peak hour)

Appendix F contains the Year 2040 without Project intersection analysis worksheets.

11.2.2 *Daily Street Segment Levels of Service*

Table 11-2 summarizes the Year 2040 without Project segment operations. As seen in *Table 11-2*, in the Year 2040 without Project traffic, all study area segments are calculated to operate at LOS C or better.

11.2.3 *Ramp Merge Analysis*

Table 11–3 summarizes the operations of the Ramp Merge sections under Year 2040 without Project scenario. As seen in *Table 11–3*, two of the four merge sections analyzed are calculated to operate at LOS D or better. The following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the AM peak hour)
- SR 166 on-ramp merge to NB I-5 (LOS F during the AM and PM peak hours)

11.2.4 *Ramp Diverge Analysis*

Table 11–4 summarizes the operations of the Ramp Diverge sections under Year 2040 without Project scenario. As seen in *Table 11–3*, three of the five diverge sections analyzed are calculated to operate at LOS D or better. The following ramp diverge sections are calculated to operate at LOS F:

- SB I-5 off-ramp diverge to SR 166 (LOS F during the AM peak hour)
- NB I-5 off-ramp diverge to SR 166 (LOS F during the AM and PM peak hours)

Appendix F contains the Year 2040 without Project Ramp Merge and Diverge analysis worksheets.

11.3 Year 2040 with Entire Project Analysis

11.3.1 *Intersection Analysis*

Table 11-1 summarizes the Year 2040 + Project Alternative A1 peak hour intersection operations during the weekday peak hours. As seen in *Table 11-1*, with the addition of Alternative A1 Project traffic, with the addition of Entire Alternative A1 traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS E or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the weekday AM and PM peak hours)
- Maricopa Highway / I-5 SB Ramps (LOS F during the AM peak hour)
- Maricopa Highway / I-5 NB Ramps (LOS F during the AM peak hour)

The Project has a cumulative impact at these intersections in Alternative A1.

Appendix G contains the Year 2040 + Entire Alternative A1 Project intersection analysis worksheets.

11.3.2 *Daily Street Segment Levels of Service*

Table 11-2 summarizes the Year 2040 + Project Alternative A1 segment operations. As seen in *Table 11-2*, with the addition of Project Alternative A1 Project traffic, all study area segments are calculated to operate at LOS D or better.

11.3.3 *Ramp Merge Analysis*

Table 11–4 summarizes the operations of the Ramp Merge sections under Year 2040 + Project Alternative A1 scenario. As seen in *Table 11–4*, with the addition of the Entire Project Alternative A1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the AM peak hour) - There is no change in LOS with the addition of Project traffic.
- SR 166 on-ramp merge to NB I-5 (LOS F during the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

11.3.4 *Ramp Diverge Analysis*

Table 11–4 summarizes the operations of the Ramp Diverge sections under Year 2040 + Project Alternative A1 scenario. As seen in *Table 11–4*, with the addition of the Entire Project Alternative A1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SB I-5 off-ramp diverge to SR 166 (LOS F during the AM peak hour) - There is no change in LOS with the addition of Project traffic.

- NB I-5 off-ramp diverge to SR 166 (LOS F during the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

Appendix G contains the Year 2040 + Entire Alternative A1 Project Ramp Merge and Diverge analysis worksheets.

ALTERNATIVE A2

12.0 ALTERNATIVE A2 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

As explained in Section 10.0, Alternative A1 Trip Generation/Distribution/Assignment, using the trip generation rates described in Section 8.0, Trip Generation Methodology, Weekday and Saturday trip generation was estimated for Alternative A2 as described below.

12.1.1 *Weekday*

Alternative A2 is planned to be developed in two Phases. ***Table 12-1*** summarizes the Alternative A2 Weekday trip generation. As seen in *Table 12-1*, the proposed land uses in Alternative A2 are estimated to generate a total of 8,741 daily trips, with 452 AM peak hour trips (283 inbound / 169 outbound) and 733 PM peak hour trips (400 inbound / 333 outbound) during the weekdays. The casino is calculated to generate 784 daily *diverted link* trips with 40 AM peak hour trips (25 inbound and 15 outbound) and 67 PM peak hour trips (37 inbound and 30 outbound).

The Entire Alternative A2 land uses are estimated to generate a total of 12,268 daily trips, with 702 AM peak hour trips (437 inbound / 265 outbound) and 1,098 PM peak hour trips (556 inbound / 542 outbound) during the weekdays.

12.1.2 *Saturday*

Table 12-2 summarizes the Alternative A2 Saturday trip generation. As seen in *Table 12-2*, the Alternative A2 land uses are estimated to generate a total of 13,802 daily trips, with 938 PM peak hour trips (367 inbound / 571 outbound) during the Saturday. The casino is calculated to generate 1,290 daily *diverted link* trips with 86 PM peak hour trips (33 inbound and 53 outbound).

As seen in *Table G*, the Entire Alternative A2 land uses are estimated to generate a total of 16,308 daily Saturday trips, with 1,286 PM peak hour trips (551 inbound / 735 outbound) during the Saturday.

12.2 Trip Distribution

The Proposed Alternative A2 site is the same as the Alternative A1 site. As in Alternative A1, it is assumed that 50% of the Project traffic is oriented to the north, 25% each on I-5 and SR 99, 35% is oriented to the south on SR 99, 10% is to the south on I-5 and 5% to the west on Maricopa Highway.

Figure 12–1 depicts the Alternative A2 Project Traffic Distribution. ***Figure 12–2*** depicts the Alternative A2 Weekday Project Phase 1 Traffic Volumes, while ***Figure 12–3*** depicts the Alternative A2 Saturday Project Phase 1 Traffic Volumes. ***Figure 12–4*** depicts the Alternative A2 Weekday Entire Project Traffic Volumes, while ***Figure 12–5*** depicts the Alternative A2 Saturday Entire Project Traffic Volumes. ***Figure 12–6*** depicts the Existing + Alternative A2 Weekday Project Phase 1 Traffic Volumes, while ***Figure 12–7*** depicts the Existing + Alternative A2 Saturday Project Phase 1 Traffic Volumes. ***Figure 12–8*** depicts the Opening Year (2023) + Alternative A2 Weekday Project Phase 1 Traffic Volumes, while ***Figure 12–9*** depicts the Opening Year (2023) + Alternative A2 Saturday Project Phase 1 Traffic Volumes.

963

Footnotes:

a. Casino Gaming Area: Weekday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 2666.1 Ln(x) - 5464; PM Rate: y = 318.37 Ln (x) - 921.31. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the KSF.

b. Diverted link trips are generated by the Casino and hotel only. Diverted link trip reduction is applied only to the freeway traffic volumes.

c. Hotel: The weekday rates are based on the rates in the *Traffic Needs Assessment of Tribal Development Projects in the San Diego Region*- March 2003 Update, San Diego County.

d. Organic Farm: Weekday rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

e. Single Family Home: Weekday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, ITE. Daily Rate: Ln(T) = 0.92 Ln(X) + 2.71; AM Peak Hour: T = 0.71(X) + 4.80; and PM Peak Hour: Ln (T) = 0.96 Ln (X) + 0.20. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

f. Community Park: 10 times the weekday rates are for Community Park, Land Use 411, *Trip Generation Manual,* 10th Edition, *ITE* are applied.

g. Community Center: Weekday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

h. Health Center: Weekday trip rates for Medical-Dental office, Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

i. Tribal Administration: Since this Tribal office is meant for only tribe members, 50% of the weekday trip rates for Small Office building Land Use 712, Trip Generation Manual, 10th Edition, ITE is used.

TABLE 12-2
ALTERNATIVE A2 - SATURDAY TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)		Saturday PM Peak Hour				
		Rate [a]	Volume	Rate	In:Out Split	Volume		
						In	Out	Total

Community Park [e]	52 Acres	19.6 /Acres	1,019	2.80	55 : 45	80	66	146
Community Center [f]	68 KSF	4.55 /KSF	309	0.54	54 : 46	19	17	36
Health Center [g]	43 KSF	4.285 /KSF	184	1.55	50 : 50	34	33	67
Tribal Administration [h]	42.5 KSF	- -	-	-	- -	-	-	-
Subtotal Phase 2			**2,506**			**184**	**164**	**348**
Entire Project Primary Trips			**15,018**			**518**	**682**	**1,200**
Entire Project Total Trips			**16,308**			**551**	**735**	**1,286**

Footnotes:

a. Casino Gaming Area: Saturday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 5159.1 Ln(x) - 12844; PM Rate: y = 448.1 Ln (x) - 1374. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the square footage.

b. Diverted link trips are generated by the Casino and hotel only. Diverted link trip reduction is applied only to the freeway traffic volumes.

c. Hotel: The Saturday rates are based on the rates in the San Diego County Casino study. Peak hour rates are based on Hotel, Land Use 310, Trip Generation Manual, 10th Edition, Institute of Transportation Engineers (ITE). The peak hour split is not available and was assumed.

d. Organic Farm: Rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

e. Single Family Homes: Saturday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, (ITE). Daily Rate: Ln(T) = 0.94 Ln(X) + 2.56; Peak Hour: T = 0.84(X) + 17.99. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

f. Community Park: Saturday rates are based on Public Park, Land Use 411, *Trip Generation Manual*, 10th Edition, (ITE). The ITE trip rates are very low and hence were increased by 10 times.

g. Community Center: Saturday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

h. Health Center: Saturday trip rates for Medical-Dental office Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

i. Tribal Administration: This office is assumed to be closed during the Saturday.

13.0 ANALYSIS OF NEAR-TERM SCENARIOS – ALTERNATIVE A2

13.1 Existing + Project Alternative A2 Phase 1

13.1.1 *Intersection Analysis*

Table 13-1 summarizes the Existing + Project Alternative A2 Phase 1 Weekday peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 13-1*, with the addition of Alternative A2 Project Phase 1 traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS E or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the weekday PM peak hour and Saturday peak hour)
- Maricopa Highway / Stevens Drive (LOS E during Saturday peak hour)

The Project has a direct impact at this intersection in Alternative A2.

Appendix H contains the Existing + Project Alternative A2 Phase 1 Weekday and Saturday intersection analysis worksheets.

13.1.2 *Daily Street Segment Levels of Service*

Table 13-2 summarizes the Existing + Project Alternative A2 Phase 1 Weekday segment operations. As seen in *Table 13-2*, with the addition of Alternative A2 Project Phase 1 traffic, all study area segments are calculated to operate at LOS C or better on a weekday.

Table 13-3 summarizes the Existing + Project Alternative A2 Phase 1 Saturday segment operations. As seen in *Table 13-2*, with the addition of Alternative A2 Project Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday.

13.1.3 *Ramp Merge Analysis*

Table 13–4 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative A2 Phase 1 Weekday scenario. As seen in *Table 13–4*, with the addition of Project Alternative A2 Phase 1 traffic, the SR 166 to NB I-5 ramp merge is calculated to operate at LOS F during the PM peak hour.

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 13–5 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative A2 Phase 1 Saturday scenario. As seen in *Table 13–5*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS E during the PM peak hour)

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

13.1.4 *Ramp Diverge Analysis*

Table 13–4 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative A2 Phase 1 Weekday scenario. As seen in *Table 13–4*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp diverge section is calculated to operate at LOS E:

- NB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 13–5 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative A2 Phase 1 Saturday scenario. As seen in *Table 13–5*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Appendix H contains the Existing + Project Alternative A2 Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

13.2 Opening Year (2023) without Project

The Opening Year (2023) without Project intersection peak hour, segment and freeway segment analyses are the same as in Section 10.2 and is therefore not repeated here. However, for the convenience of the reader, the results of the intersection and segment analyses (Weekday and Saturday) are included in *Tables 13-1, 13-2 and 13-3* respectively.

13.3 Opening Year (2023) + Project Phase 1

13.3.1 *Intersection Analysis*

Table 13-1 summarizes the Opening Year (2023) + Project Alternative A2 Phase 1 peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 13-1*, with the addition of Project Alternative A2 Phase 1 traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS E or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the Weekday AM and PM peak hours and Saturday peak hour)
- Stevens Drive / Maricopa Highway (LOS E during the Saturday peak hour)

The Project has a direct impact at this intersection in Alternative A2.

Appendix I contains the Opening Year (2023) + Project Alternative A2 Phase 1 Weekday and Saturday intersection analysis worksheets.

13.3.2 *Daily Street Segment Levels of Service*

Table 13-2 summarizes the Opening Year (2023) + Project Alternative A2 Phase 1 Weekday segment operations. As seen in *Table 13-2*, with the addition of Project Alternative A2 Phase 1 traffic, all study area segments are calculated to operate at LOS C or better on a weekday.

Table 13-3 summarizes the Opening Year (2023) + Project Alternative A2 Phase 1 Saturday segment operations. As seen in *Table 13-2*, with the addition of Project Alternative A2 Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday.

13.3.3 *Ramp Merge Analysis*

Table 13–6 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative A2 Phase 1 Weekday scenario. As seen in *Table 13–6*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp merge section is calculated to operate at LOS F:

- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 13–7 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative A2 Phase 1 Saturday scenario. As seen in *Table 13–7*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB SR 99 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

13.3.4 *Ramp Diverge Analysis*

Table 13–6 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative A2 Phase 1 Weekday scenario. As seen in *Table 13–6*, with the addition of Project Alternative A2 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during both, the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

Table 13–7 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative A2 Phase 1 Saturday scenario. As seen in *Table 13–7*, with the addition of Project

Alternative A2 Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SB SR 99 off-ramp diverge to Valpredo Avenue (LOS F during the PM peak hour)
- SB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during both, the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

Appendix I contains the Opening Year (2023) + Project Alternative A2 Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

14.0 ANALYSIS OF LONG-TERM (YEAR 2040) SCENARIOS – ALTERNATIVE A2

14.1 Year 2040 Traffic Volumes

The methodology used to forecast the Year 2040 volumes is explained in Section 11.0 Analysis of Long-Term Scenarios – Alternative A1. The same applies for Alternative A2 since the Year 2040 without Project volumes are the same.

Figure 11-1 depicts the Year 2040 without Project traffic volumes. ***Figure 14-1*** depicts the Year 2040 with Project Alternative A2 traffic volumes.

14.2 Year 2040 without Project Analysis

The Year 2040 without Project peak hour intersection and segment are the same as described in Section 11.2. The delays and levels of service are repeated in *Table 17-1 and 17-2* for the convenience of the reader.

14.3 Year 2040 with Project Analysis

14.3.1 *Intersection Analysis*

Table 14-1 summarizes the Year 2040 + Project Alternative A2 peak hour intersection operations during the weekday peak hours. As seen in *Table 14-1*, with the addition of Alternative A2 Project traffic, the minor street left-turn movements the following intersections are calculated to operate at LOS E or worse:

- Maricopa Highway / S. Sabodan Street (LOS F during the Weekday AM and PM peak hours)
- Maricopa Highway / I-5 SB Ramps (LOS F during the Weekday AM peak hour)
- Maricopa Highway / I-5 NB Ramps (LOS F during the Weekday AM peak hour)

The Project has a cumulative impact at these intersections in Alternative A2.

Appendix J contains the Year 2040 + Entire Alternative A2 Project intersection analysis worksheets.

14.3.2 *Daily Street Segment Levels of Service*

Table 14-2 summarizes the Year 2040 + Project Alternative A2 segment operations. As seen in *Table 14-2*, with the addition of Project Alternative A2 Project traffic, all study area segments are calculated to operate at LOS D or better.

14.3.3 *Ramp Merge Analysis*

Table 14–3 summarizes the operations of the Ramp Merge sections under Year 2040 + Project Alternative A2 scenario. As seen in *Table 14–3*, with the addition of the Entire Project Alternative A2 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

- SR 166 on-ramp merge to NB I-5 (LOS F during both, the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

14.3.4 *Ramp Diverge Analysis*

Table 14–3 summarizes the operations of the Ramp Diverge sections under Year 2040 + Project Alternative A2 scenario. As seen in *Table 14–3*, with the addition of the Entire Project Alternative A2 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during both, the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

Appendix J contains the Year 2040 + Entire Alternative A2 Project Ramp Merge and Diverge analysis worksheets.

TABLE 14–1
YEAR 2040 WEEKDAY INTERSECTION OPERATIONS – ALTERNATIVE A2

Intersection	Control Type	Peak Hour	Year 2040 Without Project		Year 2040 With Entire Project		Δ [c] Delay	Sig?
			Delay [a]	LOS [b]	Delay	LOS

TEJON CASINO

ALTERNATIVE B

15.0 ALTERNATIVE B TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

As explained in Section 10.0, Alternative A1 Trip Generation/Distribution/Assignment, using the trip generation rates described in Section 8.0, Trip Generation Methodology, Weekday and Saturday trip generation was estimated for Alternative B as described below.

15.1.1 *Weekday*

Alternative B is planned to be developed in two Phases. ***Table 15-1*** summarizes the Alternative B Weekday trip generation. As seen in *Table 15-1*, the proposed land uses in Alternative B are estimated to generate a total of 9,408 daily trips, with 493 AM peak hour trips (308 inbound / 185 outbound) and 798 PM peak hour trips (436 inbound / 362 outbound) during the weekdays. The casino and is calculated to generate 817 daily *diverted link* trips with 42 AM peak hour trips (27 inbound and 16 outbound) and 71 PM peak hour trips (39 inbound and 32 outbound).

As seen in *Table 15-1*, the proposed land uses in Alternative B are estimated to generate a total of 10,053 daily trips, with 548 AM peak hour trips (343 inbound / 205 outbound) and 864 PM peak hour trips (461inbound / 403 outbound) during the weekdays.

15.1.2 *Saturday*

Table 15-2 summarizes the Alternative B Saturday trip generation. As seen in *Table 15-2*, the Alternative B land uses are estimated to generate a total of 14,795 daily trips, with 1,024 PM peak hour trips (404 inbound / 620 outbound) during the Saturday. The casino is calculated to generate 1,355 daily *diverted link* trips with 92 PM peak hour trips (35 inbound and 57 outbound). As seen in *Table 15-2*, the Alternative B land uses are estimated to generate a total of 15,149 daily trips, with 1,084 PM peak hour trips (435 inbound / 649 outbound) during the Saturday.

15.2 Trip Distribution

The Proposed Alternative B site is well connected (accessed) both from I-5 and SR 99. There is little to no local traffic on the surface streets. Most of the traffic to the Casino is regional. Even though the Project site is closer to I-5 than SR 99, since SR 99 is a 6-lane freeway and I-5 is a 4-lane freeway and carries a large amount of traffic, it is anticipated that more patrons will find it easier to utilize SR 99 to access the site than I-5. Hence, it is assumed that more project traffic from the south will utilize SR 99 than I-5. It is assumed that 50% of the Project traffic is oriented to the north, 25% each on I-5 and SR 99, 25% is oriented to the south on SR 99, 20% to the south on I-5 and 5% to the west on Maricopa Highway.

Figure 15–1 depicts the Alternative B Project Traffic Distribution. ***Figure 15–2*** depicts the Alternative B Weekday Project Phase 1 Traffic Volumes, while ***Figure 15–3*** depicts the Alternative B Saturday Project Phase 1 Traffic Volumes. ***Figure 15–4*** depicts the Alternative B Weekday Entire Project Traffic Volumes, while ***Figure 15–5*** depicts the Alternative B Saturday Entire Project Traffic Volumes.

Figure 15–6 depicts the Existing + Alternative B Weekday Project Phase 1 Traffic Volumes, while ***Figure 15–7*** depicts the Existing + Alternative B Saturday Project Phase 1 Traffic Volumes. ***Figure 15–8*** depicts the Opening Year (2023) + Alternative B Weekday Project Phase 1 Traffic Volumes, while ***Figure 15–9*** depicts the Opening Year (2023) + Alternative B Saturday Project Phase 1 Traffic Volumes.

Table 15-1

Health Center [h]	9 KSF	17.4 /KSF	157	1.39	78 : 22	10	3	13	1.73	28 : 72	4	12	16
Tribal Administration [i]	12 KSF	8.095 /KSF 182	97	0.96	83 : 17	10	2	12	1.23	28 : 72	4	11	15
Subtotal Future Development			**645**			**35**	**20**	**55**			**25**	**41**	**66**
Entire Project Primary Trips			**9.236**			**316**	**189**	**506**			**422**	**371**	**793**
Entire Project Total Trips			**10,053**			**343**	**205**	**548**			**461**	**403**	**864**

Footnotes:

a. Casino Gaming Area: Weekday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 2666.1 Ln(x) - 5464; PM Rate: y = 318.37 Ln (x) - 921.31. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the KSF.

b. Diverted link trips are generated by the Casino and hotel only. Diverted link trip reduction is applied only to the freeway traffic volumes.

c. Hotel: The weekday rates are based on the rates in the *Traffic Needs Assessment of Tribal Development Projects in the San Diego Region*- March 2003 Update, San Diego County.

d. RV Parking: Weekday trip rates for Land Use 416 Campground / Recreational Vehicle Park, ITE is used. Daily trip rates are not available. Hence, the daily rips were estimated assuming the peak hour volumes are 10% of the daily trips. Rates shown are average rates calculated by dividing the volume by the KSF.

e. Organic Farm: Weekday rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

f. Single Family Home: Weekday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, ITE. Daily Rate: Ln(T) = 0.92 Ln(X) + 2.71; AM Peak Hour: T = 0.71(X) + 4.80; and PM Peak Hour: Ln (T) = 0.96 Ln (X) + 0.20. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

g. Community Park: 10 times the weekday rates are for Community Park, Land Use 411, *Trip Generation Manual,* 10th Edition, *ITE* are applied.

h. Community Center: Weekday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

i. Health Center: Weekday trip rates for Medical-Dental office, Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

j. Tribal Administration: Since this Tribal office is meant for only tribe members, 50% of the weekday trip rates for Small Office building Land Use 712, Trip Generation Manual, 10th Edition, ITE is used.

Table 15-2
Alternative B - Saturday Trip Generation

Land Use	Size	Daily Trip Ends (ADTs)		Saturday PM Peak Hour			
		Rate [a]	Volume	Rate	In:Out Split	Volume	
						In	Out	Total

Community Center [g]	9 KSF	4.55 /KSF	41	0.54	54 : 46	3	2	5
Health Center [h]	9 KSF	4.285 /KSF	39	1.55	50 : 50	7	7	14
Tribal Administration [i]	12 KSF	- -	-	-	- -	-	-	-
Subtotal Future Development			**354**			**31**	**29**	**60**
Entire Project Primary Trips			**13,794**			**400**	**592**	**992**
Entire Project Total Trips			**15,149**			**435**	**649**	**1,084**

Footnotes:

a. Casino Gaming Area: Saturday rates are based on trip generation rates developed using actual traffic counts at the Harrah's Rincon Casino in January 2006 (San Diego, CA), the Black Oak Casino in February 2006 (Tuolumne, CA) and the Chuckchansi Gold Casino August 2005 (Coarsegold, CA), in the Year 2007. Daily rate: y = 5159.1 Ln(x) - 12844; PM Rate: y = 448.1 Ln (x) - 1374. AM rate: 60% of PM with 63% inbound / 37% outbound. Rates shown are average rates calculated by dividing the volume by the KSF.

b. Diverted link trips are generated by the Casino and hotel only. Diverted link trip reduction is applied only to the freeway traffic volumes.

c. Hotel: The Saturday rates are based on the rates in the San Diego County Casino study. Peak hour rates are based on Hotel, Land Use 310, Trip Generation Manual, 10th Edition, Institute of Transportation Engineers (ITE). The peak hour split is not available and was assumed.

d. RV Parking: Saturday trip rates are not available and hence, weekday PM trip rates for Land Use 416 Campground / Recreational Vehicle Park is used. Daily trip rates are not available. Hence, the daily rips were estimated assuming the peak hour volumes are 10% of the daily trips. Rates shown are average rates calculated by dividing the volume by the KSF.

e. Organic Farm: Rates are based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002, for Agriculture Land Use.

f. Single Family Homes: Saturday rates are based on Land Use 210, *Trip Generation Manual*, 10th Edition, (ITE). Daily Rate: Ln(T) = 0.94 Ln(X) + 2.56; Peak Hour: T = 0.84(X) + 17.99. Rates shown are average rates calculated by dividing the volume by the dwelling unit.

g. Community Park: Saturday rates are based on Public Park, Land Use 411, *Trip Generation Manual*, 10th Edition, (ITE). The ITE trip rates are very low and hence were increased by 10 times.

h. Community Center: Saturday rates are based on Recreational Community Center, Land Use 495, *Trip Generation Manual*, 10th Edition, ITE. However, since this is community center is meant for only tribe members, 50% of the rates is applied.

i. Health Center: Saturday trip rates for Medical-Dental office Land Use 720, Trip Generation Manual, 10th Edition, ITE are used. However, since this is a health center for only tribe members, 50% of the rates is applied.

j. Tribal Administration: This office is assumed to be closed during the Saturday.

16.0 ANALYSIS OF NEAR-TERM SCENARIOS – ALTERNATIVE B

16.1 Existing + Project

16.1.1 *Intersection Analysis*

Table 16-1 summarizes the Existing + Project Alternative B Phase 1 peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 16-1*, with the addition of Alternative B Project Phase 1 traffic, the minor street left-turn movements at all unsignalized intersections are calculated to continue to operate at LOS C or better, except the following:

- Maricopa Highway / I-5 NB Ramps (LOS E during the Weekday PM peak hour and LOS F during the Saturday peak hour)
- Stevens Drive / Maricopa Highway (LOS E during the Saturday peak hour)

The Project has a direct impact at these intersections in Alternative B.

Appendix K contains the Existing + Project Alternative B Phase 1 Weekday and Saturday intersection analysis worksheets.

16.1.2 *Daily Street Segment Levels of Service*

Table 16-2 summarizes the Existing + Project Alternative B Phase 1 Weekday segment operations. As seen in *Table 16-2*, with the addition of Alternative B Project Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Weekday, except the following:

Maricopa Highway: Wheeler Ridge Access Road to I-5 SB Ramps (LOS E)

Table 16-3 summarizes the Existing + Project Alternative B Phase 1 Saturday segment operations. As seen in *Table 16-2*, with the addition of Alternative B Project Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday, except the following:

- **Maricopa Highway:** Wheeler Ridge Access Road to I-5 SB Ramps (LOS E)

The Project has no significant impact on this roadway segment in Alternative B.

16.1.3 *Ramp Merge Analysis*

Table 16–4 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative B Phase 1 Weekday scenario. As seen in *Table 16–4*, with the addition of Project Alternative B Phase 1 traffic, the following ramp diverge section is calculated to operate at LOS F

- SR 166 on-ramp merge to NB I-5 ramp (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 16–5 summarizes the operations of the Ramp Merge sections under Existing + Project Alternative B Phase 1 Saturday scenario. As seen in *Table 16–5*, with the addition of Project

Alternative B Phase 1 traffic, two of the four merge sections analyzed are calculated to operate at LOS D or better. The following ramp diverge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

16.1.4 *Ramp Diverge Analysis*

Table 16–4 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative B Phase 1 Weekday scenario. As seen in *Table 16–4*, with the addition of Project Alternative B Phase 1 traffic, the following ramp diverge section is calculated to operate at LOS E:

- NB I-5 off-ramp diverge to SR 166 ramp (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 16–5 summarizes the operations of the Ramp Diverge sections under Existing + Project Alternative B Phase 1 Saturday scenario. As seen in *Table 16–5*, with the addition of Project Alternative B Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Appendix K contains the Existing + Project Alternative B Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

16.2 Opening Year (2023) without Project

The Opening Year (2023) without Project intersection peak hour, segment and freeway segment analyses are the same as in Section 10.2 and is therefore not repeated here. However, for the convenience of the reader, the results of the intersection and segment analyses (Weekday and Saturday) are included in *Tables 16-1, 16-2 and 16-3* respectively.

16.3 Opening Year (2023) + Project Phase 1

16.3.1 *Intersection Analysis*

Table 16-1 summarizes the Opening Year (2023) + Project Alternative B Phase 1 peak hour intersection operations during the weekday peak hours and the Saturday peak hour. As seen in *Table 1-1*, with the addition of Project Alternative B Phase 1 traffic, the minor street left-turn movements at all unsignalized intersections are calculated to continue to operate at LOS D or better, except the following:

- Maricopa Highway / I-5 SB Ramps (LOS E during the Weekday AM peak hour)

- Maricopa Highway / I-5 NB Ramps (LOS F during the Weekday AM and PM peak hours and the Saturday peak hour)
- Stevens Drive / Maricopa Highway (LOS E during the Saturday peak hour)

The Project has a direct impact at these intersections in Alternative B.

Appendix L contains the Opening Year (2023) + Project Alternative B Phase 1 Weekday and Saturday intersection analysis worksheets.

16.3.2 *Daily Street Segment Levels of Service*

Table 16-2 summarizes the Opening Year (2023) + Project Alternative B Phase 1 Weekday segment operations. As seen in *Table 16-2*, with the addition of Project Alternative B Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Weekday, except the following:

- **Maricopa Highway:** Wheeler Ridge Access Road to I-5 SB Ramps (LOS E)

Table 16-3 summarizes the Opening Year (2023) + Project Alternative B Phase 1 Saturday segment operations. As seen in *Table 16-2*, with the addition of Project Alternative B Phase 1 traffic, all study area segments are calculated to operate at LOS D or better on a Saturday, except the following:

- **I-5:** SR 99 to S. Wheeler Ridge Road (LOS E)
- **Maricopa Highway:** Wheeler Ridge Access Road to I-5 SB Ramps (LOS E)

The Project has no significant impacts on these freeway and roadway segments in Alternative B.

16.3.3 *Ramp Merge Analysis*

Table 16–6 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative B Phase 1 Weekday scenario. As seen in *Table 16–6*, with the addition of Project Alternative B Phase 1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to NB I-5 ramp (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 16–7 summarizes the operations of the Ramp Merge sections under Opening Year (2023) + Project Alternative B Phase 1 Saturday scenario. As seen in *Table 16–7*, with the addition of Project Alternative B Phase 1 traffic, the following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB SR 99 (LOS F during the PM peak hour)
- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- SR 166 on-ramp merge to NB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

16.3.4 *Ramp Diverge Analysis*

Table 16–6 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative B Phase 1 Weekday scenario. As seen in *Table 16–6*, with the addition of Project Alternative B Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS E or F:

- SB I-5 off-ramp diverge to SR 166 (LOS E during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 ramp (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

Table 16–7 summarizes the operations of the Ramp Diverge sections under Opening Year (2023) + Project Alternative B Phase 1 Saturday scenario. As seen in *Table 16–7*, with the addition of Project Alternative B Phase 1 traffic, the following ramp diverge sections are calculated to operate at LOS F:

- SB SR 99 off-ramp diverge to Valpredo Avenue (LOS F during the PM peak hour)
- SB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.

The increase in the density in the influence area due to the addition of Project traffic is less than 10%. Hence the Project is considered to have no significant impacts in these sections.

Appendix L contains the Opening Year (2023) + Project Alternative B Phase 1 Weekday and Saturday Ramp Merge and Diverge analysis worksheets.

17.0 ANALYSIS OF LONG-TERM SCENARIOS – ALTERNATIVE B

17.1 Year 2040 Traffic Volumes

The methodology used to forecast the Year 2040 volumes is explained in Section 11.0 Analysis of Long-Term Scenarios – Alternative A1. The same applies for Alternative B since the Year 2040 without Project volumes are the same.

Figure 11-1 depicts the Year 2040 without Project traffic volumes. ***Figure 17-1*** depicts the Year 2040 with Project Alternative B traffic volumes.

17.2 Year 2040 without Project Analysis

The Year 2040 without Project peak hour intersection and segment operations are the same as described in Section 11.2. The delays and levels of service are repeated in *Table 17-1 and 17-2* for the convenience of the reader.

17.3 Year 2040 with Project Analysis

17.3.1 *Intersection Analysis*

Table 17-1 summarizes the Year 2040 + Alternative B Project peak hour intersection operations during the weekday peak hours. As seen in *Table 17-1*, with the addition of Alternative B Project traffic, the minor street left-turn movements at all unsignalized intersections are calculated to continue to operate at LOS C or better except the following:

- Maricopa Highway / I-5 SB Ramps (LOS F during the Weekday AM peak hour)
- Maricopa Highway / I-5 NB Ramps (LOS F during the Weekday AM and PM peak hours)

The Project has a cumulative impact at these intersections in Alternative B.

Appendix M contains the Year 2040 + Entire Alternative B Project intersection analysis worksheets.

17.3.2 *Daily Street Segment Levels of Service*

Table 17-2 summarizes the Year 2040 + Alternative B Project segment operations. As seen in *Table 17-2*, with the addition of Project Alternative B Project traffic, all study area segments are calculated to operate at LOS D or better, except the following:

- **Maricopa Highway:** Wheeler Ridge Access Rd to I-5 SB Ramps (LOS E)

The Project has no significant impact on this segment in Alternative B.

17.3.3 *Ramp Merge Analysis*

Table 17–3 summarizes the operations of the Ramp Merge sections under Year 2040 + Project Alternative B scenario. As seen in *Table 17–3*, with the addition of the Entire Project Alternative B

traffic, two of the four merge sections analyzed are calculated to operate at LOS D or better. The following ramp merge sections are calculated to operate at LOS F:

- SR 166 on-ramp merge to SB I-5 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- SR 166 on-ramp merge to NB I-5 (LOS F during the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

17.3.4 *Ramp Diverge Analysis*

Table 17–3 summarizes the operations of the Ramp Diverge sections under Year 2040 + Project Alternative B scenario. As seen in *Table 17–3*, with the addition of the Entire Project Alternative B traffic, three of the five diverge sections analyzed are calculated to operate at LOS D or better. The following ramp diverge sections are calculated to operate at LOS F:

- SB I-5 off-ramp diverge to SR 166 (LOS F during the PM peak hour) - There is no change in LOS with the addition of Project traffic.
- NB I-5 off-ramp diverge to SR 166 (LOS F during the AM and PM peak hours) - There is no change in LOS with the addition of Project traffic.

Appendix M contains the Year 2040 + Entire Alternative B Project Ramp Merge and Diverge analysis worksheets.

Year 2040 + Alternative B Project Traffic Volumes

Weekday

TEJON CASINO

18.0 ACCESS DISCUSSION

The project access and recommended traffic control for each alternative is discussed in this section.

18.1 Alternatives A1 and A2

A majority of the project traffic is assumed to access the Project from the northerly extension of S. Sabodan Street, north of SR 166 in both Alternatives A1 and A2. The remaining Project traffic (10% inbound) is assumed to access the Project site via the SR 99 / Valpredo Avenue interchange and the Sabodan Street extension to Valpredo Avenue. The following are recommended:

1. Extend the existing S. Sabodan Street north of SR 166 to Valpredo Avenue.
2. Provide for a future 4-lane cross-section between SR 166 and the Main Casino Driveway on S. Sabodan Street and construct two lanes in Phase 1. Provide two lanes from the Main entrance to Valpredo Avenue.
3. Initially, provide a STOP control at the Main Casino Driveway at Sabodan Street, for traffic exiting the Casino and the following geometry:

   SB – One through /right-turn lane
   NB – One left-turn lane and one through lane
   EB – One left-turn lane, one right-turn lane (with overlap phase when signalized) outbound

   This intersection will need to be signalized in the near future, once traffic volumes on Sabodan Street reach about 7,000 ADT.
4. Extend Wildflower Street from its western terminus to the western boundary of the Alternative A1 Site, along the southern frontage so that a secondary parking lot access is available to patrons.

18.2 Alternative B

A majority of the project traffic is assumed to access the Project from the easterly driveway on SR 166 in Alternative B. The remaining Project traffic is assumed to access the Project site at the westerly driveway on SR 166. The following are recommended:

1. Ensure the Project driveway lines up with the existing eastern Chevron Driveway, with the Chevron Driveway being the 4th (north leg) of the intersection.
2. Provide a traffic signal at the main casino resort driveway and provide the following geometry:

   WB – One right-turn lane, one through lane and dual left-turn lanes
   NB – One shared through/left lane and one right-turn lane with an overlap phasing
   EB – One left-turn lane, one through lane and one through/right lane

3. Provide a second EB lane along the site frontage on SR-166 trapping (right-turn) onto the I-5 SB on ramp.
4. Provide a second parking lot access on SR-166, west of the main access.

19.0 SIGNIFICANCE OF IMPACTS AND MITIGATION MEASURES

19.1 Significance of Impacts

Based on the significance criteria described in Section 5.0, the following significant impacts are calculated for each of the three alternatives.

19.1.1 *Alternative A1*

DIRECT ONLY IMPACT

A1-1 Stevens Drive / Maricopa Highway intersection

DIRECT AND CUMULATIVE IMPACTS

A1-2 Maricopa Highway / S. Sabodan Street intersection

CUMULATIVE ONLY IMPACT

A1-3 Maricopa Highway / I-5 SB Ramps intersection

A1-4 Maricopa Highway / I-5 NB Ramps intersection

A1-5 SR 166 to NB I-5 Ramp Merge

19.1.2 *Alternative A2*

DIRECT ONLY IMPACT

A2-1 Maricopa Highway / Stevens Drive intersection

DIRECT AND CUMULATIVE IMPACTS

A2-2 Maricopa Highway / S. Sabodan Street intersection

CUMULATIVE ONLY IMPACT

A2-3 Maricopa Highway / I-5 SB Ramps intersection

A2-4 Maricopa Highway / I-5 NB Ramps intersection

A2-5 SR 166 to NB I-5 Ramp Merge

19.1.3 *Alternative B*

DIRECT ONLY IMPACT

B-1 Stevens Drive / Maricopa Highway intersection

DIRECT AND CUMULATIVE IMPACTS

B-2 Maricopa Highway / I-5 SB Ramps intersection

B-3 Maricopa Highway / I-5 NB Ramps intersection

19.2 Mitigation Measures

Intersection Control Evaluation (ICE) studies will be conducted prior to the Project construction time to determine the appropriate intersection control for the intersections within Caltrans jurisdiction. ICE refers to the "evolved" decision-making process and framework that a growing number of transportation agencies are adopting to provide a more balanced or holistic approach to the consideration and selection of access strategies and concepts during transportation planning, project identification and initiation processes that contemplate the addition, expansion or "full control" of intersections.

In advance of conducting the ICE studies, the following improvements are recommended to mitigate the direct and cumulative impacts. Section 18.3 includes the fair share calculations for each of the impacts for which a fair share is recommended.

19.2.1 *Alternative A1*

DIRECT ONLY IMPACT

A1-1 Stevens Drive / Maricopa Highway intersection

Install a traffic signal and provide an exclusive westbound left-turn lane on Maricopa Highway at Stevens Drive, or, install a roundabout, based on the recommendations of an ICE study.

DIRECT AND CUMULATIVE IMPACTS

The following mitigation measures will mitigate both the direct and cumulative impacts.

A1-2 Maricopa Highway / S. Sabodan Street

Install a traffic signal and provide the following geometry:

SB – Construct the north leg of the intersection and provide one left-turn lane and one right turn lane in the SB direction and one NB lane.

WB – One right-turn lane, one through lane and one left-turn lane

EB – One left-turn lane, one through lane and one shared through/right lane

NB – One left-turn lane and one shared through/right lane

Alternatively, install a roundabout, based on the recommendations of an ICE study.

CUMULATIVE ONLY IMPACT

A1-3 Maricopa Highway / I-5 SB Ramps intersection

Contribute a fair share towards installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

A1-4 Maricopa Highway / I-5 NB Ramps intersection

Contribute a fair share towards installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

A1-5 SR 166 to NB I-5 Ramp Merge

Contribute a fair share towards providing a 1,000-foot Auxiliary Lane on I-5 North.

19.2.2 *Alternative A2*

DIRECT ONLY IMPACT

A2-1 Stevens Drive / Maricopa Highway intersection

Install a traffic signal and provide an exclusive westbound left-turn lane on Maricopa Highway at Stevens Drive or, install a roundabout, based on the recommendations of an ICE study.

DIRECT AND CUMULATIVE IMPACTS

The following mitigation measures will mitigate both the direct and cumulative impacts.

A2-2 Maricopa Highway / S. Sabodan Street

Install a traffic signal and provide the following geometry:

SB – Construct the north leg of the intersection and provide one left-turn lane and one right turn lane in the SB direction and one NB lane.

WB – One right-turn lane, one through lane and one left-turn lane

EB – One left-turn lane, one through lane and one shared through/right lane

NB – One left-turn lane and one shared through/right lane

Alternatively, install a roundabout, based on the recommendations of an ICE study.

CUMULATIVE IMPACT

A2-3 Maricopa Highway / I-5 SB Ramps intersection

Contribute a fair share towards installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

A2-4 Maricopa Highway / I-5 NB Ramps intersection

Contribute a fair share towards installing a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

A1-6 SR 166 to NB I-5 Ramp Merge

Contribute a fair share towards providing a 1,000-foot Auxiliary Lane on I-5 Northbound mainline at the merge.

19.2.3 *Alternative B*

DIRECT IMPACT

B-1 Stevens Drive / Maricopa Highway

Install a traffic signal and provide an exclusive westbound left-turn lane on Maricopa Highway at Stevens Drive or, install a roundabout, based on the recommendations of an ICE study.

DIRECT IMPACTS AND CUMULATIVE IMPACTS

The following mitigation measures will mitigate both the direct and cumulative impacts.

B-2 Maricopa Highway / I-5 SB Ramps intersection

Install a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

B-3 Maricopa Highway / I-5 NB Ramps intersection

Install a traffic signal or a roundabout with or without a loop ramp, based on the recommendations of an ICE study.

19.3 Fair Share Calculations

All significant impacts listed above are within Caltrans jurisdiction. The Caltrans formula for calculating the fair share shown below is used.

Equitable Share Responsibility: Equation C-1

Note: $TE < T_B$, see explanation for TB below.

$$P = \frac{T}{T_B - T_E}$$

Where:

P = The equitable share for the proposed project's traffic impact.

T = The vehicle trips generated by the project during the peak hour of adjacent State highway facility in vehicles per hour (vph).

T_B = The forecasted traffic volume on an impacted State highway facility at the time of general plan build-out (e.g., 20-year model or the furthest future model date feasible), vph.

T_E = The traffic volume existing on the impacted State highway facility plus other approved projects that will generate traffic that has yet to be constructed/opened, vph.

19.3.1 *Alternative A1*

The fair share calculations for Alternative A1 are:

A1-3 Maricopa Highway / I-5 SB Ramps intersection

= (AM Project Traffic) / (Total Future AM Traffic-Total Existing AM traffic), or,

= 123 / (1,309 - 455) = 14%

A1-4 Maricopa Highway / I-5 NB Ramps intersection

= 202 / (1,198 -419) = 26%

A1-5 SR 166 to NB I-5 Ramp Merge

= 92 / (210 - 34) = 52%

19.3.2 *Alternative A2*

The fair share calculations for Alternative A2 are:

A2-3 Maricopa Highway / I-5 SB Ramps intersection

= 110 / (1,298 - 455) = 13%

A2-4 Maricopa Highway / I-5 NB Ramps intersection

= 180 / (1,180 - 419) = 24%

A2-5 SR 166 to NB I-5 Ramp Merge

= 83 / (206 - 34) = 48%

19.3.3 *Alternative B*

There are no fair share mitigation measures in Alternative B.

19.4 Project Traffic Contribution at all Impacted Locations

Table 19-1 summarizes the total amount of Project (Phase 1) traffic at all impacted locations for all three alternatives. As seen in *Table 19-1,* locations where the Project has either a direct or cumulative significant impact are included.

The column entitled "Project Traffic Contribution is the percent of Project traffic at the impacted location. The column entitled "Project Responsibility" refers to the responsibility of the project for the mitigation. If the impact is direct, the Project is responsible for the entire mitigation. If the impact is cumulative, the Project is responsible only for the percent of the Project traffic at the location.

19.5 Post Mitigation Analysis

A post mitigation analysis was conducted to determine if the recommended mitigation measures would mitigate the Project related significant direct and cumulative impacts to a level below significance. The mitigation measure analyzed at all intersections within Caltrans jurisdiction is a traffic signal, to demonstrate that the recommended mitigation measure will adequately mitigate the impact to a level of significance. An ICE evaluation report that will be prepared per Caltrans standards at the time of the required mitigation will analyze other adequate alternate mitigation measures.

19.5.1 *Alternative A1*

Tables 19-2, 19-3 and 19-4 summarize the results of the mitigation analysis for the Alternative A1 significant direct impacts in the Existing + Project Phase 1, Opening Year + Project Phase 1 and Year 2040 + Project Phase 1, scenarios, respectively. As seen in these tables, with the implementation of the recommended mitigation measures, the impacted intersections are calculated to operate at LOS C or better in the near-term and at LOS D or better in the long-term.

19.5.2 *Alternative A2*

Tables 19-5, 19-6 and 19-7 summarize the results of the mitigation analysis for the Alternative A2 significant direct impacts in the Existing + Project Phase 1, Opening Year + Project Phase 1 and Year 2040 + Project Phase 1, scenarios, respectively. As seen in these tables, with the implementation of the recommended mitigation measures, the impacted intersections are calculated to operate at LOS C or better in the near-term and long-term.

19.5.3 *Alternative B*

Tables 19-8, 19-9 and 19-10 summarize the results of the mitigation analysis for the Alternative B significant direct impacts in the Existing + Project Phase 1, Opening Year + Project Phase 1 and Year 2040 + Project Phase 1, scenarios, respectively. As seen in these tables, with the implementation of the recommended mitigation measures, the impacted intersections are calculated to operate at LOS C or better in the near-term and long-term.

Appendix N contains the mitigation analysis worksheets for the mitigation analysis.

4. This post-mitigation analysis only includes a traffic signal as the mitigation. Other mitigation measures will be analyzed in the ICE study.

19.6 Signal Warrant Analysis

A peak hour signal warrant analysis was conducted for all the intersections where the installation of a traffic signal is recommended as the mitigation measure, in each alternative.

The following assumptions are made in determining the conditions at the subject intersections:

- *Approach Lanes* – One right-turn lane and one left-turn lane will be provided in the southbound direction.

  Page 847 of the California Manual On Uniform Traffic Control Devices (MUTCD) 2014 Edition states "*for an approach with one lane for through and right-turning traffic plus a left-turn lane, if engineering judgment indicates that it should be considered a one-lane approach because the traffic using the left-turn lane is minor, the total traffic volume approaching the intersection should be applied against the signal warrants as a one-lane approach. The approach should be considered two lanes if approximately half of the traffic on the approach turns left and the left-turn lane is of sufficient length to accommodate all left-turn vehicles."*
- *Approach Volumes* – As stated in the MUTCD, "engineering judgment and rationale should be applied to a street approach with one through/left-turn lane plus a right-turn lane. In this case, the degree of conflict of minor-street right-turn traffic with traffic on the major street should be considered. Thus, right-turn traffic should not be included in the minor-street volume if the movement enters the major street with minimal conflict. The approach should be evaluated as a one-lane approach with only the traffic volume in the through/left-turn lane considered."

- The 70% factor is used for all the intersections, since the posted speed limit on the major street exceeds 40 mph and these intersections lie within the built-up area of an isolated community having a population of less than 10,000.

19.6.1 *Alternative A1*

In Alternative A1, the S. Sabodan Street / Maricopa Highway and Stevens Drive / Maricopa Highway intersections are impacted in the Existing + Project Phase 1 Scenario and the I-5 SB Ramps / Maricopa Highway I-5 NB Ramps / Maricopa Highway intersections are impacted in the long-Term. The peak hour signal warrants are conducted in the respective scenarios.

Following are the Signal Warrant Analyses at the above intersections:

A1-1 Stevens Drive / Maricopa Highway Intersection

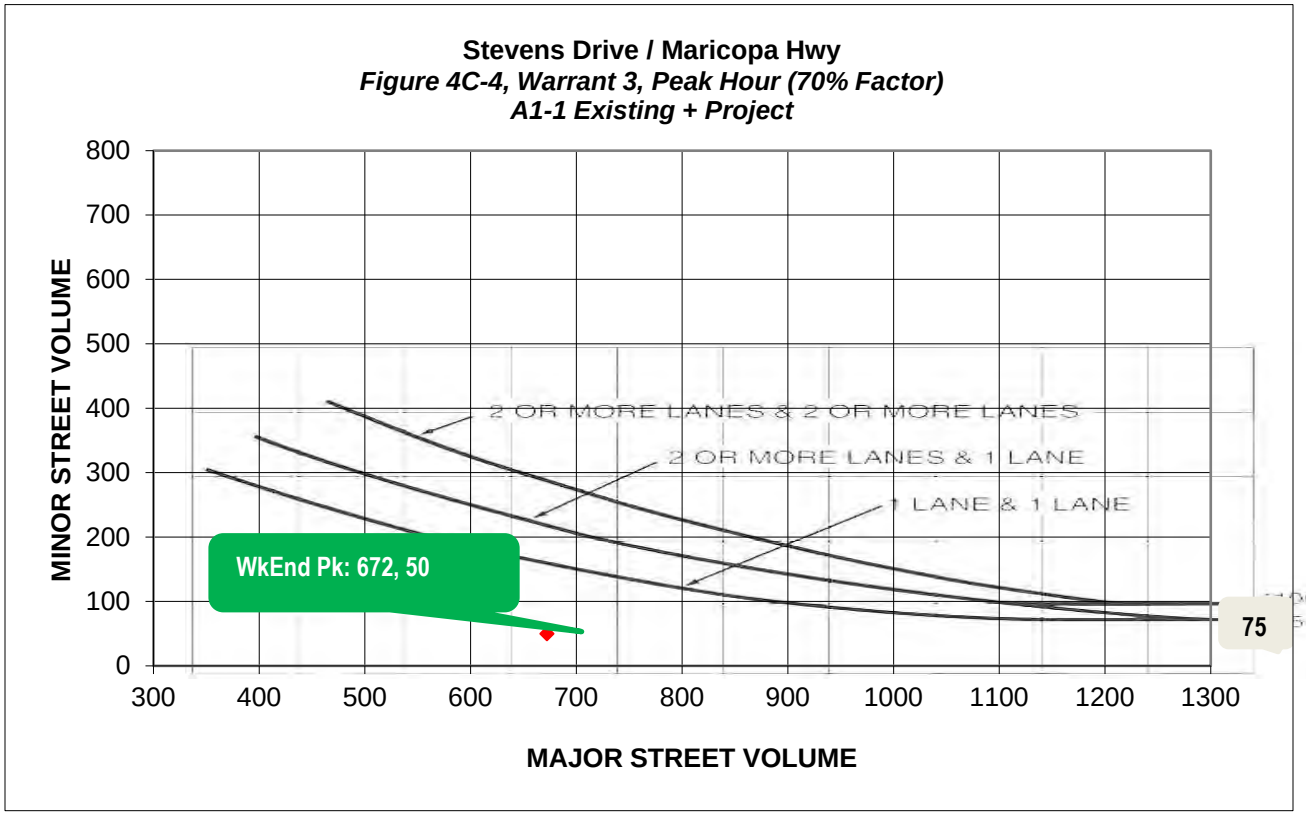
Assumptions:

The following assumptions apply at this intersection for all analysis scenarios.

- At this location, Maricopa Highway is a two-lane road (one lane in each direction) with dedicated EB left-turn lane on Maricopa Highway at the intersection. The minor street has a shared through-right lane. This approach will function and is analyzed as a One-Lane approach.

As described above, a shared through-right lane on southbound Stevens Drive at Maricopa Highway. Based on the number of approach lanes and the MUTCD (previous bullet item), a no reduction in right-turning traffic is assumed. ***Chart 1*** below, depicts the Peak hour warrant plot. As seen in the plot, the warrant is not met at this intersection, since the plot point falls below the curve.

CHART 1



A1-2 S. Sabodan Street / Maricopa Highway Intersection

Assumptions:

The following assumptions apply at this intersection for all analysis scenarios.

- At this location, Maricopa Highway is a two-lane road (one lane in each direction) with dedicated WB left-turn and EB right-turn lanes on Maricopa Highway, at the intersection. The fourth (north leg) does not exist and when built, will have a left-turn lane and a through-right-turn lane. This approach will function and is analyzed as a Two-Lane approach.
- As described above, a shared through-right lane and a left-turn lane is provided on southbound S. Sabodan Street at Maricopa Highway. Based on the number of approach lanes and the MUTCD (previous bullet item), a 100% reduction in right-turning traffic is assumed since the right-turning traffic has its own lane.

Charts 2 and 3 below, depict the peak hour warrant plots for the Weekday PM and Weekend Peak, respectively. As seen in the plots, the peak hour volume warrant is met during both the Weekday PM and Weekend Peak at this intersection, since the plot points fall above the curve.

A1-3 I-5 SB Ramps / Maricopa Highway Intersection

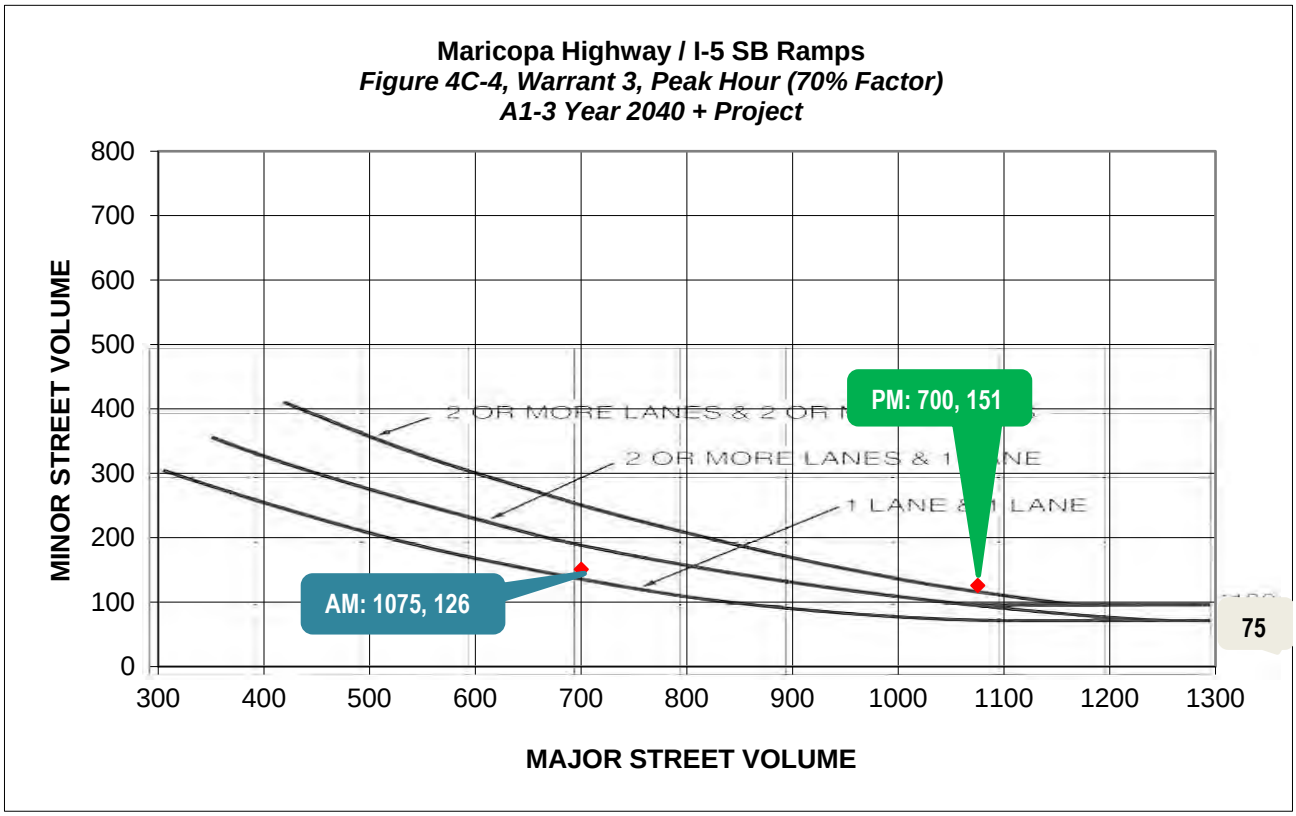
Assumptions:

The following assumptions apply at this intersection for all analysis scenarios.

- At this location, Maricopa Highway is a two-lane road (one lane in each direction). The minor street (SB Off-Ramp) has a shared left-through-right lane and a left-turn lane. This approach will function and is analyzed as a One-Lane approach.
- As described above, a shared left-through-right lane on the southbound ramp at Maricopa Highway. Based on the number of approach lanes and the MUTCD (previous bullet item), a no reduction in right-turning traffic is assumed.

Chart 4 below, depicts the Peak hour warrant plot. As seen in the plot, the warrant is met during the AM and PM peak hours where the plot points fall above the curve.

CHART 4



A1-4 I-5 NB Ramps / Maricopa Highway Intersection

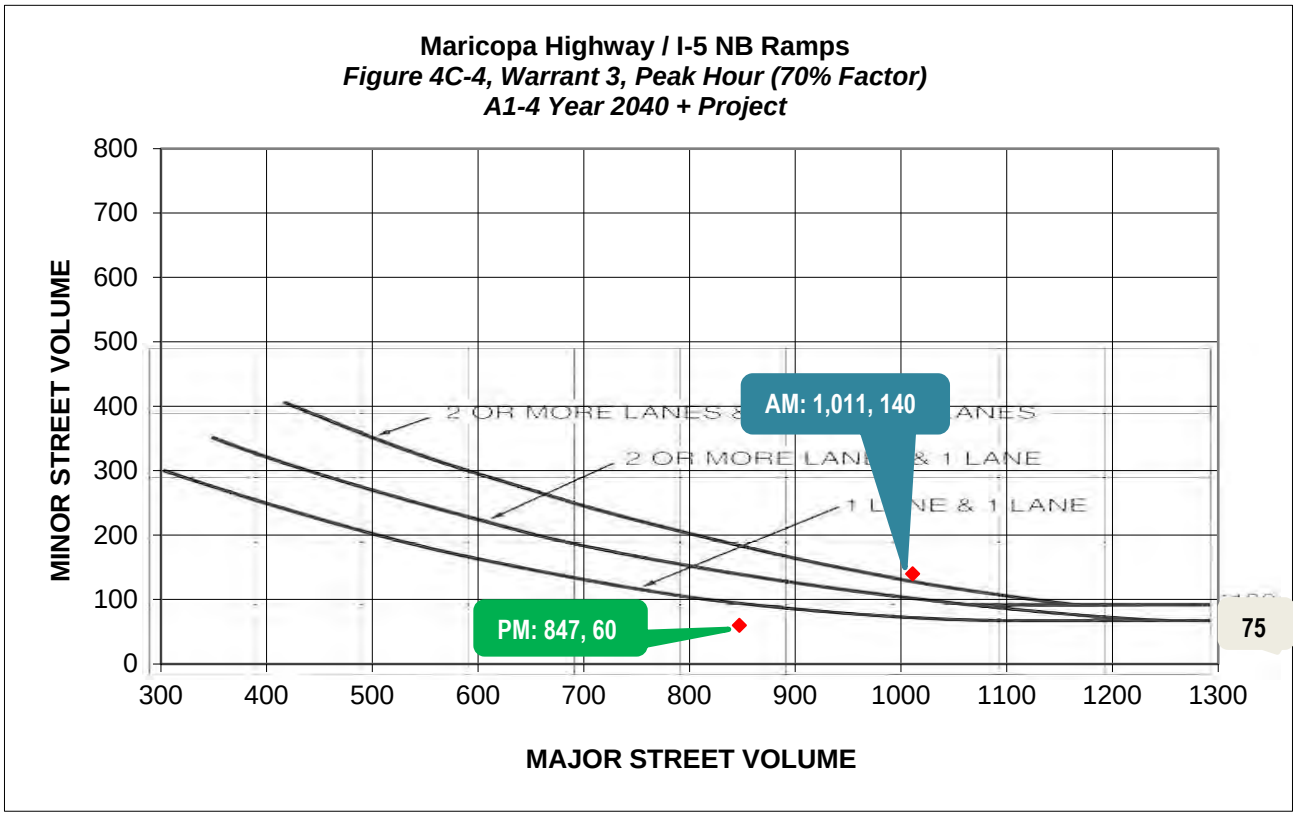
Assumptions:

The following assumptions apply at this intersection for all analysis scenarios.

- At this location, Maricopa Highway is a two-lane road (one lane in each direction). The minor street (NB Off-Ramp) has a shared left-through-right lane and a left-turn lane. This approach will function and is analyzed as a One-Lane approach.
- As described above, a shared left-through-right lane on the northbound ramp at Maricopa Highway. Based on the number of approach lanes and the MUTCD (previous bullet item), a no reduction in right-turning traffic is assumed.

Chart 5 below, depicts the Peak hour warrant plot. As seen in the plot, the warrant is met during the AM peak hour, where the plot points fall above the curve.

CHART 5



19.6.2 *Alternative A2*

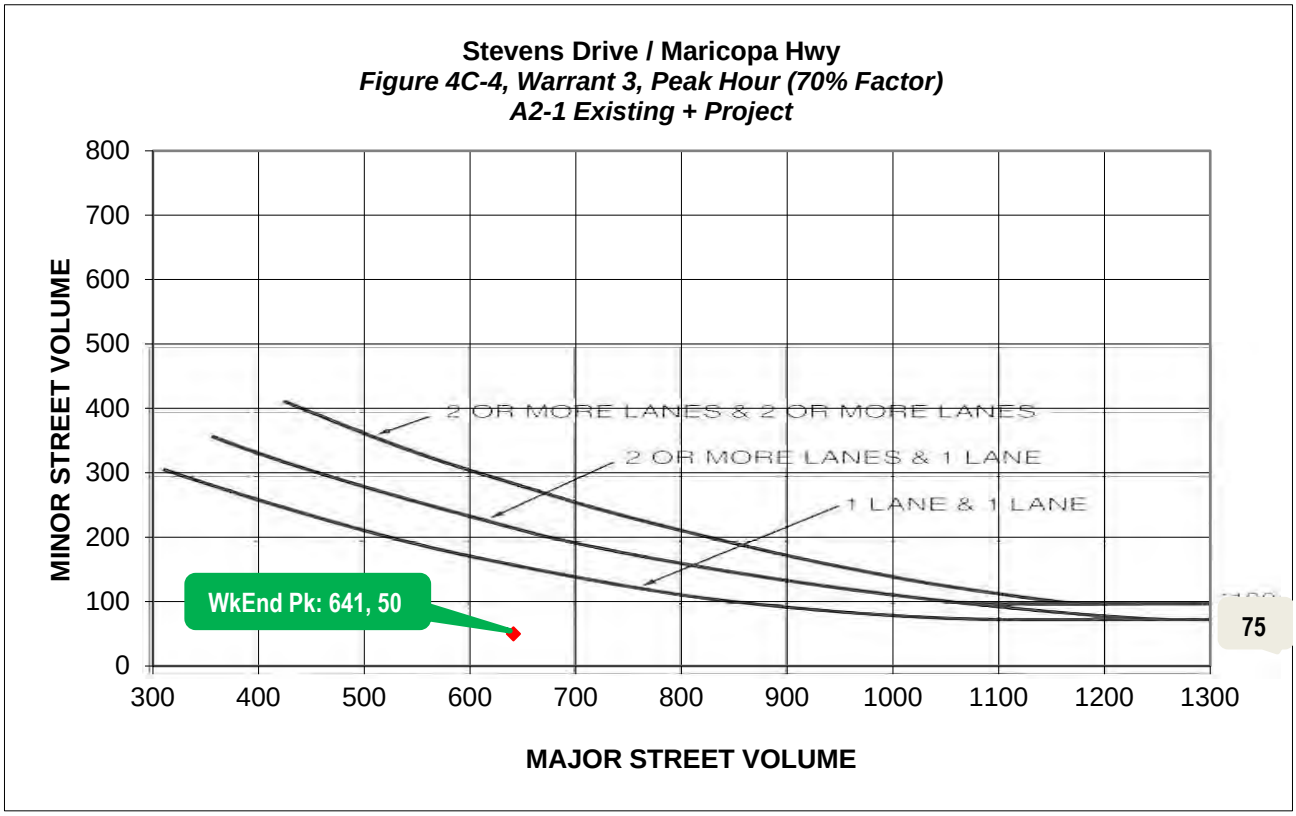
In Alternative A2, the S. Sabodan Street / Maricopa Highway and Stevens Drive / Maricopa Highway intersections are impacted in the Existing + Project Phase 1 Scenario and the I-5 SB Ramps / Maricopa Highway I-5 NB Ramps / Maricopa Highway intersections are impacted in the long-Term. The peak hour signal warrants are conducted in the respective scenarios. Volume and geometry assumptions described in Alternative A1 apply for Alternative A2 and are therefore not repeated here.

Following are the Signal Warrant Analyses at the above intersections:

A2-1 Stevens Drive / Maricopa Highway Intersection

Chart 6 below, depicts the Peak hour warrant plot. As seen in the plot, the warrant is not met at this intersection, since the plot point falls below the curve.

CHART 6



A1-2 S. Sabodan Street / Maricopa Highway Intersection

Charts 7 and 8 below, depict the peak hour warrant plots for the Weekday PM and Weekend Peak, respectively. As seen in the plots, the peak hour volume warrant is met during both the Weekday PM and Weekend Peak at this intersection, since the plot points fall above the curve.

Report Description

Report	Aggregates>Time Series
Report link	*.ca.gov/?report*
Report generated	04/24/2019 17:23
PeMS version	caltrans_pems-18.0.0

Report Parameters

Parameter	Value
Quantity	Flow
Data	176,256 Lane Points
Data Quality	96.1% Observed
Segment Type	VDS
Segment Name	Mainline VDS 602339 - WHEELER RIDGE RD - I5 SB
start date	01/01/2018 00:00:00
end date	12/31/2018 23:59:59
Day of Week	Tu,We,Th
Granularity	day

Day	Flow (Veh/Day)	# Lane Points	% Observed
01-02-2018	56333	1152	99.00

KERN COUNTY STANDARDS FOR TRAFFIC ENGINEERING

Kern County
Chapter II. Traffic Studies

Sec. 902-1 Responsibility for Traffic Studies

Traffic studies may be required by the County in order to adequately assess the impacts of a development proposal on the existing and/or planned major street system. These impacts would typically be addressed in the "Traffic Circulation" section of an Environmental Impact Report (EIR). If a full EIR is not required, a Negative Declaration, or an expanded initial study addressing traffic impacts, may be required. The primary responsibility for assessing the traffic impacts associated with a proposed development shall be the developer's, with the County serving in a review capacity.

The following development proposals will require regional traffic studies prepared, in a format acceptable to the Kern County Roads Department, unless the study is waived.

902-1.01 Any Project proposed within the Kern County General Plan, where a Transportation Impact Fee Program has not been implemented and the increase in project trip generation during any peak hour is expected to exceed 50 vehicles.

902-1.02 Any Project proposed within the Rosamond-Willow Springs Specific Plan where the increase in project trip generation during any peak hour is expected to exceed 50 vehicles.

902-1.03 Any General/Specific Plan Amendment application, which is expected to intensify land use over that previously allowed in the General/Specific Plan whereby the increase in trip generation during any peak hour is expected to exceed 50 vehicles.

Where proposed projects, as noted above, are not expected to result in an increase in trip generation it is exempt from a regional traffic impact study. To be eligible, a traffic analysis shall be submitted and approved which computes trip generation with existing and proposed land uses. Said analysis shall show that increase in peak hour trip generation does not exceed 50 trips.

902-1.04 Special traffic studies may be required where special circumstances dictate the need for a traffic study (such as issues of safe access concerns, significant public opposition, request for deviation from standards, large commercial/ industrial centers, etc.).

902-1.05 Where access points are not defined at the time the traffic study is prepared, additional traffic work may be required when the access points are determined.

902-1.06 Transportation consultants are required to discuss projects with the Development Review Division prior to starting the study.

902-1.07 The traffic study shall be prepared, stamped and signed by a licensed Traffic Engineer or Civil Engineer experienced in preparing traffic studies.

Sec. 902-2 Traffic Study Format

In order to provide consistency and to facilitate staff review of traffic studies, the Caltrans “Guide for The Preparation of Traffic Impact Studies” shall be followed in the preparation of traffic studies.

(http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf)

Facilities to be studied shall be any City, State or County facility (mainline, interchange, structure, intersection or any project on the Transportation Impact Fee (TIF) list) when the peak hour trip generation onto said facility exceeds 50 trips. For those facilities currently experiencing level-of-service (LOS) "C" or less, the following "sliding scale" of "added peak project trips" shall be applied as the procedure to determine whether the facility should be included:

EXISTING LOS	ADDED PEAK PROJECT TRIPS
"C"	50
"D"	40
"E"	20
"F"	10

902-2.01 Project Trip Generation and Design Hour Volumes must be calculated using the data contained within the Institute of Transportation Engineer's (ITE) Trip Generation Manual, latest edition, or more appropriate local data as approved by the Traffic Engineer. (Formula Averaging is NOT acceptable for the calculation of Peak Hour trip generation rates as published in the ITE Trip Generation Manual, latest edition.)

902-2.02 Capacity Analysis must be determined by the methods contained within the Highway Capacity Manual (HCM), latest edition.

902-2.03 Traffic Signal requirements will be determined by the warrants contained in the California Manual on Uniform Traffic Control Devices (California MUTCD), latest edition.

902-2.04 Proportionate Shares along State highways shall be calculated using the Caltrans formula. All other County Proportionate Shares are calculated with the following formula:

(Project Traffic/Future Forecasted Traffic) x 100

CALTRANS TRAFFIC IMPACT STUDY (TIA) GUIDELINES

GUIDE FOR THE PREPARATION

OF

TRAFFIC IMPACT STUDIES

STATE OF CALIFORNIA
DEPARTMENT OF TRANSPORTATION

December 2002

PREFACE

The California Department of Transportation (Caltrans) has developed this "Guide for the Preparation of Traffic Impact Studies" in response to a survey of cities and counties in California. The purpose of that survey was to improve the Caltrans local development review process (also known as the Intergovernmental Review/California Environmental Quality Act or IGR/CEQA process). The survey indicated that approximately 30 percent of the respondents were not aware of what Caltrans required in a traffic impact study (TIS).

In the early 1990s, the Caltrans District 6 office located in Fresno identified a need to provide better quality and consistency in the analysis of traffic impacts generated by local development and land use change proposals that effect State highway facilities. At that time, District 6 brought together both public and private sector expertise to develop a traffic impact study guide. The District 6 guide has proven to be successful at promoting consistency and uniformity in the identification and analysis of traffic impacts generated by local development and land use changes.

The guide developed in Fresno was adapted for statewide use by a team of Headquarters and district staff. The guide will provide consistent guidance for Caltrans staff who review local development and land use change proposals as well as inform local agencies of the information needed for Caltrans to analyze the traffic impacts to State highway facilities. The guide will also benefit local agencies and the development community by providing more expeditious review of local development proposals.

Even though sound planning and engineering practices were used to adapt the Fresno TIS guide, it is anticipated that changes will occur over time as new technologies and more efficient practices become available. To facilitate these changes, Caltrans encourages all those who use this guide to contact their nearest district office (i.e., IGR/CEQA Coordinator) to coordinate any changes with the development team.

ACKNOWLEDGEMENTS

The District 6 traffic impact study guide provided the impetus and a starting point for developing the statewide guide. Special thanks is given to Marc Birnbaum for recognizing the need for a TIS guide and for his valued experience and vast knowledge of land use planning to significantly enhance the effort to adapt the District 6 guide for statewide use. Randy Treece from District 6 provided many hours of coordination, research and development of the original guide and should be commended for his diligent efforts. Sharri Bender Ehlert of District 6 provided much of the technical expertise in the adaptation of the District 6 guide and her efforts are greatly appreciated.

A special thanks is also given to all those Cities, Counties, Regional Agencies, Congestion Management Agencies, Consultants, and Caltrans Employees who reviewed the guide and provided input during the development of this Guide for the Preparation of Traffic Impact Studies.

TABLE OF CONTENTS

I. INTRODUCTION

Caltrans desires to provide a safe and efficient State transportation system for the citizens of California pursuant to various Sections of the California Streets and Highway Code. This is done in partnership with local and regional agencies through procedures established by the California Environmental Quality Act (CEQA) and other land use planning processes. The intent of this guide is to provide a starting point and a consistent basis in which Caltrans evaluates traffic impacts to State highway facilities. The applicability of this guide for local streets and roads (non-State highways) is at the discretion of the effected jurisdiction.

Caltrans reviews federal, State, and local agency development projects[1], and land use change proposals for their potential impact to State highway facilities. The primary objectives of this guide is to provide:

- guidance in determining if and when a traffic impact study (TIS) is needed,
- consistency and uniformity in the identification of traffic impacts generated by local land use proposals,
- consistency and equity in the identification of measures to mitigate the traffic impacts generated by land use proposals,
- lead agency[2] officials with the information necessary to make informed decisions regarding the existing and proposed transportation infrastructure (see Appendix A, Minimum Contents of a TIS)
- TIS requirements early in the planning phase of a project (i.e., initial study, notice of preparation, or earlier) to eliminate potential delays later,
- a quality TIS by agreeing to the assumptions, data requirements, study scenarios, and analysis methodologies prior to beginning the TIS, and
- early coordination during the planning phases of a project to reduce the time and cost of preparing a TIS.

II. WHEN A TRAFFIC IMPACT STUDY IS NEEDED

The level of service[3] (LOS) for operating State highway facilities is based upon measures of effectiveness (MOEs). These MOEs (see Appendix "C-2") describe the measures best suited for analyzing State highway facilities (i.e., freeway segments, signalized intersections, on- or off-ramps, etc.). Caltrans endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" (see Appendix "C-3") on State highway facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. If an existing State highway facility is operating at less than the appropriate target LOS, the existing MOE should be maintained.

---

[1] "Project" refers to activities directly undertaken by government, financed by government, or requiring a permit or other approval from government as defined in Section 21065 of the Public Resources Code and Section 15378 of the California Code of Regulations.

[2] "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. Defined in Section 21165 of the Public Resources Code, the "California Environmental Quality Act, and Section 15367 of the California Code of Regulations.

[3] "Level of service" as defined in the latest edition of the Highway Capacity Manual, Transportation Research Board, National Research Council.

A. Trip Generation Thresholds

The following criterion is a starting point in determining when a TIS is needed. When a project:

1. Generates over 100 peak hour trips assigned to a State highway facility
2. Generates 50 to 100 peak hour trips assigned to a State highway facility – and, affected State highway facilities are experiencing noticeable delay; approaching unstable traffic flow conditions (LOS "C" or "D").
3. Generates 1 to 49 peak hour trips assigned to a State highway facility – the following are examples that may require a full TIS or some lesser analysis[4]:
    a. Affected State highway facilities experiencing significant delay; unstable or forced traffic flow conditions (LOS "E" or "F").
    b. The potential risk for a traffic incident is significantly increased (i.e., congestion related collisions, non-standard sight distance considerations, increase in traffic conflict points, etc.).
    c. Change in local circulation networks that impact a State highway facility (i.e., direct access to State highway facility, a non-standard highway geometric design, etc.).

Note: A traffic study may be as simple as providing a traffic count to as complex as a microscopic simulation. The appropriate level of study is determined by the particulars of a project, the prevailing highway conditions, and the forecasted traffic.

B. Exceptions

Exceptions require consultation between the lead agency, Caltrans, and those preparing the TIS. When a project's traffic impact to a State highway facility can clearly be anticipated without a study and all the parties involved (lead agency, developer, and the Caltrans district office) are able to negotiate appropriate mitigation, a TIS may not be necessary.

C. Updating An Existing Traffic Impact Study

A TIS requires updating when the amount or character of traffic is significantly different from an earlier study. Generally a TIS requires updating every two years. A TIS may require updating sooner in rapidly developing areas and not as often in slower developing areas. In these cases, consultation with Caltrans is strongly recommended.

III. SCOPE OF TRAFFIC IMPACT STUDY

Consultation between the lead agency, Caltrans, and those preparing the TIS is recommended before commencing work on the study to establish the appropriate scope. At a minimum, the TIS should include the following:

A. Boundaries of the Traffic Impact Study

All State highway facilities impacted in accordance with the criteria in Section II should be studied. Traffic impacts to local streets and roads can impact intersections with State highway facilities. In these cases, the TIS should include an analysis of adjacent local facilities, upstream and downstream, of the intersection (i.e., driveways, intersections, and interchanges) with the State highway.

[4] A "lesser analysis" may include obtaining traffic counts, preparing signal warrants, or a focused TIS, etc.

B. Traffic Analysis Scenarios

Caltrans is interested in the effects of general plan updates and amendments as well as the effects of specific project entitlements (i.e., site plans, conditional use permits, sub-divisions, rezoning, etc.) that have the potential to impact a State highway facility. The complexity or magnitude of the impacts of a project will normally dictate the scenarios necessary to analyze the project. Consultation between the lead agency, Caltrans, and those preparing the TIS is recommended to determine the appropriate scenarios for the analysis. The following scenarios should be addressed in the TIS when appropriate:

1. When only a general plan amendment or update is being sought, the following scenarios are required:
   a) Existing Conditions - Current year traffic volumes and peak hour LOS analysis of effected State highway facilities.
   b) Proposed Project Only with Select Zone[5] Analysis - Trip generation and assignment for build-out of general plan.
   c) General Plan Build-out Only - Trip assignment and peak hour LOS analysis. Include current land uses and other pending general plan amendments.
   d) General Plan Build-out Plus Proposed Project - Trip assignment and peak hour LOS analysis. Include proposed project and other pending general plan amendments.

2. When a general plan amendment is not proposed and a proposed project is seeking specific entitlements (i.e., site plans, conditional use permits, sub-division, rezoning, etc.), the following scenarios must be analyzed in the TIS:
   a) Existing Conditions - Current year traffic volumes and peak hour LOS analysis of effected State highway facilities.
   b) Proposed Project Only - Trip generation, distribution, and assignment in the year the project is anticipated to complete construction.
   c) Cumulative Conditions (Existing Conditions Plus Other Approved and Pending Projects Without Proposed Project) - Trip assignment and peak hour LOS analysis in the year the project is anticipated to complete construction.
   d) Cumulative Conditions Plus Proposed Project (Existing Conditions Plus Other Approved and Pending Projects Plus Proposed Project) - Trip assignment and peak hour LOS analysis in the year the project is anticipated to complete construction.
   e) Cumulative Conditions Plus Proposed Phases (Interim Years) - Trip assignment and peak hour LOS analysis in the years the project phases are anticipated to complete construction.
3. In cases where the circulation element of the general plan is not consistent with the land use element or the general plan is outdated and not representative of current or future forecasted conditions, all scenarios from Sections III. B. 1. and 2. should be utilized with the exception of duplicating of item 2.a.

[5] "Select zone" analysis represents a project only traffic model run, where the project's trips are distributed and assigned along a loaded highway network. This procedure isolates the specific impact on the State highway network.

IV. TRAFFIC DATA

Prior to any fieldwork, consultation between the lead agency, Caltrans, and those preparing the TIS is recommended to reach consensus on the data and assumptions necessary for the study. The following elements are a starting point in that consideration.

A. Trip Generation

The latest edition of the Institute of Transportation Engineers' (ITE) TRIP GENERATION report should be used for trip generation forecasts. Local trip generation rates are also acceptable if appropriate validation is provided to support them.

1. Trip Generation Rates – When the land use has a limited number of studies to support the trip generation rates or when the Coefficient of Determination (R^2) is below 0.75, consultation between the lead agency, Caltrans and those preparing the TIS is recommended.
2. Pass-by Trips[6] – Pass-by trips are only considered for retail oriented development. Reductions greater than 15% requires consultation and acceptance by Caltrans. The justification for exceeding a 15% reduction should be discussed in the TIS.
3. Captured Trips[7] – Captured trip reductions greater than 5% requires consultation and acceptance by Caltrans. The justification for exceeding a 5% reduction should be discussed in the TIS.
4. Transportation Demand Management (TDM) – Consultation between the lead agency and Caltrans is essential before applying trip reduction for TDM strategies.

NOTE: Reasonable reductions to trip generation rates are considered when adjacent State highway volumes are sufficient (at least 5000 ADT) to support reductions for the land use.

B. Traffic Counts

Prior to field traffic counts, consultation between the lead agency, Caltrans and those preparing the TIS is recommended to determine the level of detail (e.g., location, signal timing, travel speeds, turning movements, etc.) required at each traffic count site. All State highway facilities within the boundaries of the TIS should be considered. Common rules for counting vehicular traffic include but are not limited to:

1. Vehicle counts should be conducted on Tuesdays, Wednesdays, or Thursdays during weeks not containing a holiday and conducted in favorable weather conditions.
2. Vehicle counts should be conducted during the appropriate peak hours (see peak hour discussion below).
3. Seasonal and weekend variations in traffic should also be considered where appropriate (i.e., recreational routes, tourist attractions, harvest season, etc.).

C. Peak Hours

To eliminate unnecessary analysis, consultation between the lead agency, Caltrans and those preparing the TIS is recommended during the early planning stages of a project. In general, the TIS should include a morning (a.m.) and an evening (p.m.) peak hour analyses. Other peak hours (e.g., 11:30 a.m. to 1:30 p.m., weekend, holidays, etc.) may also be required to determine the significance of the traffic impacts generated by a project.

[6] "Pass-by" trips are made as intermediate stops between an origin and a primary trip destination (i.e., home to work, home to shopping, etc.).
[7] "Captured Trips" are trips that do not enter or leave the driveways of a project's boundary within a mixed-use development.

D. Travel Forecasting (Transportation Modeling)

The local or regional traffic model should reflect the most current land use and planned improvements (i.e., where programming or funding is secured). When a general plan build-out model is not available, the closest forecast model year to build-out should be used. If a traffic model is not available, historical growth rates and current trends can be used to project future traffic volumes. The TIS should clearly describe any changes made in the model to accommodate the analysis of a proposed project.

V. TRAFFIC IMPACT ANALYSIS METHODOLOGIES

Typically, the traffic analysis methodologies for the facility types indicated below are used by Caltrans and will be accepted without prior consultation. When a State highway has saturated flows, the use of a micro-simulation model is encouraged for the analysis (please note however, the micro-simulation model must be calibrated and validated for reliable results). Other analysis methods may be accepted, however, consultation between the lead agency, Caltrans and those preparing the TIS is recommended to agree on the data necessary for the analysis.

A. Freeway Segments – Highway Capacity Manual (HCM)*, operational analysis
B. Weaving Areas – Caltrans Highway Design Manual (HDM)
C. Ramps and Ramp Junctions – HCM*, operational analysis or Caltrans HDM, Caltrans Ramp Metering Guidelines (most recent edition)
D. Multi-Lane Highways – HCM*, operational analysis
E. Two-lane Highways – HCM*, operational analysis
F. Signalized Intersections[8] – HCM*, Highway Capacity Software**, operational analysis, TRAFFIX™**, Synchro**, see footnote 8
G. Unsignalized Intersections – HCM*, operational analysis, Caltrans Traffic Manual for signal warrants if a signal is being considered
H. Transit – HCM*, operational analysis
I. Pedestrians – HCM*
J. Bicycles – HCM*
K. Caltrans Criteria/Warrants – Caltrans Traffic Manual (stop signs, traffic signals, freeway lighting, conventional highway lighting, school crossings)
L. Channelization – Caltrans guidelines for Reconstruction of Intersections, August 1985, Ichiro Fukutome

*The most current edition of the Highway Capacity Manual, Transportation Research Board, National Research Council, should be used.

****NOTE**: Caltrans does not officially advocate the use of any special software. However, consistency with the HCM is advocated in most but not all cases. The Caltrans local development review units utilize the software mentioned above. If different software or analytical techniques are used for the TIS then consultation between the lead agency, Caltrans and those preparing the TIS is recommended. Results that are significantly different than those produced with the analytical techniques above should be challenged.

[8] The procedures in the Highway Capacity Manual "do not explicitly address operations of closely spaced signalized intersections. Under such conditions, several unique characteristics must be considered, including spill-back potential from the downstream intersection to the upstream intersection, effects of downstream queues on upstream saturation flow rate, and unusual platoon dispersion or compression between intersections. An example of such closely spaced operations is signalized ramp terminals at urban interchanges. Queue interactions between closely spaced intersections may seriously distort the procedures in" the HCM.

VI. MITIGATION MEASURES

The TIS should provide the nexus [Nollan v. California Coastal Commission, 1987, 483 U.S. 825 (108 S.Ct. 314)] between a project and the traffic impacts to State highway facilities. The TIS should also establish the rough proportionality [Dolan v. City of Tigard, 1994, 512 U.S. 374 (114 S. Ct. 2309)] between the mitigation measures and the traffic impacts. One method for establishing the rough proportionality or a project proponent's equitable responsibility for a project's impacts is provided in Appendix "B." Consultation between the lead agency, Caltrans and those preparing the TIS is recommended to reach consensus on the mitigation measures and who will be responsible.

Mitigation measures must be included in the traffic impact analysis. This determines if a project's impacts can be eliminated or reduced to a level of insignificance. Eliminating or reducing impacts to a level of insignificance is the standard pursuant to CEQA and the National Environmental Policy Act (NEPA). The lead agency is responsible for administering the CEQA review process and has the principal authority for approving a local development proposal or land use change. Caltrans, as a responsible agency, is responsible for reviewing the TIS for errors and omissions that pertain to State highway facilities. However, the authority vested in the lead agency under CEQA does not take precedence over other authorities in law.

If the mitigation measures require work in the State highway right-of-way an encroachment permit from Caltrans will be required. This work will also be subject to Caltrans standards and specifications. Consultation between the lead agency, Caltrans and those preparing the TIS early in the planning process is strongly recommended to expedite the review of local development proposals and to reduce conflicts and misunderstandings in both the local agency CEQA review process as well as the Caltrans encroachment permit process.

APPENDIX “A”

MINIMUM CONTENTS

OF A

TRAFFIC IMPACT STUDY

MINIMUM CONTENTS OF TRAFFIC IMPACT STUDY REPORT

I. EXECUTIVE SUMMARY

II. TABLE OF CONTENTS

A. List of Figures (Maps)
B. List of Tables

III. INTRODUCTION

A. Description of the proposed project
B. Location of project
C. Site plan including all access to State highways (site plan, map)
D. Circulation network including all access to State highways (vicinity map)
E. Land use and zoning
F. Phasing plan including proposed dates of project (phase) completion
G. Project sponsor and contact person(s)
H. References to other traffic impact studies

IV. TRAFFIC ANALYSIS

A. Clearly stated assumptions
B. Existing and projected traffic volumes (including turning movements), facility geometry (including storage lengths), and traffic controls (including signal phasing and multi-signal progression where appropriate) (figure)
C. Project trip generation including references (table)
D. Project generated trip distribution and assignment (figure)
E. LOS and warrant analyses - existing conditions, cumulative conditions, and full build of general plan conditions with and without project

V. CONCLUSIONS AND RECOMMENDATIONS

A. LOS and appropriate MOE quantities of impacted facilities with and without mitigation measures
B. Mitigation phasing plan including dates of proposed mitigation measures
C. Define responsibilities for implementing mitigation measures
D. Cost estimates for mitigation measures and financing plan

VI. APPENDICES

A. Description of traffic data and how data was collected
B. Description of methodologies and assumptions used in analyses
C. Worksheets used in analyses (i.e., signal warrant, LOS, traffic count information, etc.)

APPENDIX “B”

METHODOLOGY FOR

CALCULATING EQUITABLE

MITIGATION MEASURES

METHOD FOR CALCULATING EQUITABLE MITIGATION MEASURES

The methodology below is neither intended as, nor does it establish, a legal standard for determining equitable responsibility and cost of a project's traffic impact, the intent is to provide:

1. A starting point for early discussions to address traffic mitigation equitably.
2. A means for calculating the equitable share for mitigating traffic impacts.
3. A means for establishing rough proportionality [Dolan v. City of Tigard, 1994, 512 U.S. 374 (114 S. Ct. 2309)].

The formulas should be used when:

- A project has impacts that do not immediately warrant mitigation, but their cumulative effects are significant and will require mitigating in the future.
- A project has an immediate impact and the lead agency has assumed responsibility for addressing operational improvements

NOTE: This formula is not intended for circumstances where a project proponent will be receiving a substantial benefit from the identified mitigation measures. In these cases, (e.g., mid-block access and signalization to a shopping center) the project should take full responsibility to toward providing the necessary infrastructure.

EQUITABLE SHARE RESPONSIBILITY: **Equation C-1**

NOTE: $T_E < T_B$, see explanation for T_B below.

$$P = \frac{T}{T_B - T_E}$$

Where:

P = The equitable share for the proposed project's traffic impact.

T = The vehicle trips generated by the project during the peak hour of adjacent State highway facility in vehicles per hour, vph.

T_B = The forecasted traffic volume on an impacted State highway facility at the time of general plan build-out (e.g., 20 year model or the furthest future model date feasible), vph.

T_E = The traffic volume existing on the impacted State highway facility plus other approved projects that will generate traffic that has yet to be constructed/opened, vph.

EQUITABLE COST: **Equation C-2**

$$C = P\ (C_T)$$

Where:

C = The equitable cost of traffic mitigation for the proposed project, ($). (Rounded to nearest one thousand dollars)

P = The equitable share for the project being considered.

C_T = The total cost estimate for improvements necessary to mitigate the forecasted traffic demand on the impacted State highway facility in question at general plan build-out, ($).

NOTES

1. Once the equitable share responsibility and equitable cost has been established on a per trip basis, these values can be utilized for all projects on that State highway facility until the forecasted general plan build-out model is revised.
2. Truck traffic should be converted to passenger car equivalents before utilizing these equations (see the Highway Capacity Manual for converting to passenger car equivalents).

3. If the per trip cost is not used for all subsequent projects, then the equation below will be necessary to determine the costs for individual project impact and will require some additional accounting.

Equation C-2.A

$$C = P\left(C_T - C_C\right)$$

Where:

C = Same as equation C-2.

P = Same as equation C-2.

C_T = Same as equation C-2.

C_C = The combined dollar contributions paid and committed prior to current project's contribution. This is necessary to provide the appropriate cost proportionality. Example: For the first project to impact the State highway facility in question since the total cost (C_T) estimate for improvements necessary to mitigate the forecasted traffic demand, C_C would be equal to zero. For the second project however, C would equal $P_2(C_T - C_1)$ and for the third project to come along C would equal $P_3[C_T - (C_1 + C_2)]$ and so on until build-out or the general plan build-out was recalculated.

APPENDIX “C”

MEASURES OF EFFECTIVENESS

BY

FACILITY TYPE

MEASURES OF EFFECTIVENESS BY FACILITY TYPE

TYPE OF FACILITY	MEASURE OF EFFECTIVENESS (MOE)
Basic Freeway Segments	Density (pc/mi/ln)
Ramps	Density (pc/mi/ln)
Ramp Terminals	Delay (sec/veh)
Multi-Lane Highways	Density (pc/mi/ln)
Two-Lane Highways	Percent-Time-Following Average Travel Speed (mi/hr)
Signalized Intersections	Control Delay per Vehicle (sec/veh)
Unsignalized Intersections	Average Control Delay per Vehicle (sec/veh)
Urban Streets	Average Travel Speed (mi/hr)

Measures of effectiveness for level of service definitions located in the most recent version of the Highway Capacity Manual, Transportation Research Board, National Research Council.

Transition between LOS "C" and LOS "D" Criteria

(Reference Highway Capacity Manual)

BASIC FREEWAY SEGMENTS @ 65 mi/hr

LOS	Maximum Density (pc/mi/ln)	Minimum Speed (mph)	Maximum v/c	Maximum Service Flow Rate (pc/hr/ln)
A	11	65.0	0.30	710
B	18	65.0	0.50	1170
C	26	64.6	0.71	1680
D	35	59.7	0.89	2090
E	45	52.2	1.00	2350

SIGNALIZED INTERSECTIONS and RAMP TERMINALS

LOS	Control Delay per Vehicle (sec/veh)
A	**≤ 10**
B	**> 10 - 20**
C	**> 20 - 35**
D	**> 35 - 55**
E	**> 55 - 80**
F	**> 80**

MULTI-LANE HIGHWAYS @ 55 mi/hr

LOS	Maximum Density (pc/mi/ln)	Minimum Speed (mph)	Maximum v/c	Maximum Service Flow Rate (pc/hr/ln)
A	11	55.0	0.29	600
B	18	55.0	0.47	990
C	26	54.9	0.68	1430
D	35	52.9	0.88	1850
E	41	51.2	1.00	2100

Dotted line represents the transition between LOS "C" and LOS "D"

TWO-LANE HIGHWAYS

LOS	Percent Time-Spent-Following	Average Travel Speed (mi/hr)
A	≤ 35	> 55
B	> 35 - 50	> 50 - 55

LIST OF APPENDICES

PREFACE

This manual was prepared and updated by the City's Transportation Development Section of the Land Development Review Division of the Development Services Center. Procedures addressed in this manual include:

- Procedure for determining the type of traffic impact study needed: computerized or non-computerized

- Requirements for performing traffic impact studies

The manual was originally prepared to replace Department Instructions formulated in 1987 regarding traffic impact study procedures. These instructions had become obsolete in many areas and had been replaced by unwritten practices that reflected changing legislation, updated analysis techniques and new staff with varying perspectives. This led to a sense of confusion among consultants. A meeting was held in November 1992 to solicit feedback from traffic consultants on City procedures and reviews. The lack of predictability was a universal complaint. It had become common for study preparers to throw together an incomplete draft study simply to determine staff requirements for their particular study. The City embarked on an organization-wide effort to improve the development review process. As part of this effort, Transportation Development Section staff began to rewrite the above mentioned Department Instructions. All area traffic consultants were invited to serve on a task force to provide input and direction to staff on the traffic impact study process. It was decided that the Department Instructions would be replaced with a Traffic Impact Study Manual that would be more user friendly and easily updated to reflect new methodologies and practices. The original Traffic Impact Study Manual was produced in August 1993.

Equally important to the clearly defined process is an aggressive commitment from the reviewers (the Transportation Development Section) to embrace a partnership with the landowner/developer and the preparer (traffic consultant) to produce a high quality document that adequately serves the needs of all parties. This will also enable the review process to be completed in an expeditious manner.

This 1998 update reflects revisions to the City's land development code and improvements in capacity analysis techniques and increases consistency with the City's overall California Environmental Quality Act (CEQA) review process.

1. INTRODUCTION

This manual describes the key elements required for preparing and reviewing traffic impact studies for new and expanding land developments in San Diego. Not all analysis described in this report will have application to each particular study. Applicable analysis will be determined by the Transportation Development Section staff, in consultation with the traffic study preparer. These procedures indicated in this text are not intended to cover every conceivable situation. New procedures and analysis techniques may be needed to evaluate unique situations.

Need and Purpose

The primary purpose of this manual is to provide guidance to consultants on how to prepare traffic impact studies in San Diego. It is intended to ensure consistency among consultants, predictability to the preparer, consistency among reviewers and conformance with all applicable City and state regulations. Every attempt was made to ensure consistency with national practices prescribed in TRAFFIC ACCESS AND IMPACT STUDIES FOR SITE DEVELOPMENT, Institute of Transportation Engineers, 1991 and current local practices. This manual generally memorializes current practices. Traffic Impact Studies are intended to identify the transportation impacts of proposed development projects and to determine the need for any improvements to the adjacent and nearby road system to maintain a satisfactory level of service, safety and the appropriate access provisions for a proposed development.

Review Process

Objectives

Ideally, the review process should be iterative and should begin when the development's planning is initiated, not after a development has been planned and a traffic study completed. This will ensure that City guidelines and requirements are met while allowing the landowner/developer's goals to be accomplished. It is recommended that the developer, study preparer and staff reviewer meet at the earliest possible point in the study process.

Who Should Prepare Traffic Impact Studies?

Traffic impact studies shall be prepared under the supervision of a qualified and experienced Traffic Engineer who has specific training and experience in traffic related to preparing traffic studies for existing or proposed developments. The ability to forecast and analyze traffic needs for both developments and roadway systems is essential. All traffic impact studies shall be stamped by a California Registered Traffic Engineer.

Who Should Review Traffic Impact Studies?

Traffic impact study reviews should be conducted or directed by properly trained transportation engineers, under supervision of a California Registered Traffic Engineer. In some cases, staff from other jurisdictions (cities, county, SANDAG, Caltrans or MTDB) should be included in the review process. Reviewers should have an understanding of the development process and an understanding of City transportation policies and practices. Reviewers should be competent and confident to be able to apply sound engineering judgement in the scoping and review of traffic impact studies. Reviewers should be open minded to be able to seek solutions to landowner/developer desires while ensuring that City standards and objectives are met.

Standard Review Times

The following standards have been set to ensure that traffic impact studies are reviewed quickly. The City's goal is to complete 90 percent of all studies at or before the review times shown.

Standard City Review Times

TYPE OF STUDY	**REVIEW TIME** (Working Days)
Traffic Study Screen Check	5 days
Small Traffic Studies	
a. First Submittal	15 days
b. Second and Third Submittals	10 days
Large Traffic Studies	
a. First and Second Submittals	20 days
b. Third Submittals	15 days
Complex Traffic Studies	
a. First Submittal	30 days
b. Second Submittal	20 days
c. Third Submittal	15 days

Ethics and Objectivity

Although study preparers and reviewers will sometimes have different objectives and perspectives, all parties involved in the process should adhere to established engineering ethics and conduct all analysis and review objectively and professionally.

2. INITIATING TRAFFIC IMPACT STUDIES

Warrants for a Traffic Impact Study

The need for a traffic impact study is based on estimated daily trip generation and conformance with the community plan land use and transportation element. This determination is usually made by the Transportation Development Section staff during the project scoping stages. **Figure 1** should be used to determine if a traffic impact study is needed and to determine the type of study required. In general, traffic impact studies may be required for developments that do not conform to the community plan and generate more than 500 daily trip ends. The threshold is 1,000 daily trip ends if a project conforms to the community plan. See page 4, **Figure 1** Flow Chart.

Extent of the Study

While the need for a traffic impact study is usually determined by City staff, the extent of a study should be shared by the preparer and reviewer of the study. **Figure 1** provides some guidance on the type of study, manual versus computerized. Computerized forecasts or select zone assignments are usually required for developments that generate more than 2,400 daily trip ends, per Congestion Management Program requirements. However, many projects and area specific details cannot be adequately addressed with a generalized flow chart. The following study details should be worked out between the preparer and the reviewer in a presubmittal conference:

- Which components of a full traffic impact study are needed to address issues associated with the site, proposed development, and the nearby transportation system?

- How will trip generation be determined? If rates other than City standard rates are proposed, staff concurrence must be obtained. Will pass-by reductions be applied?

- How large will the study area be?

- How should adjacent developments be considered in the study?

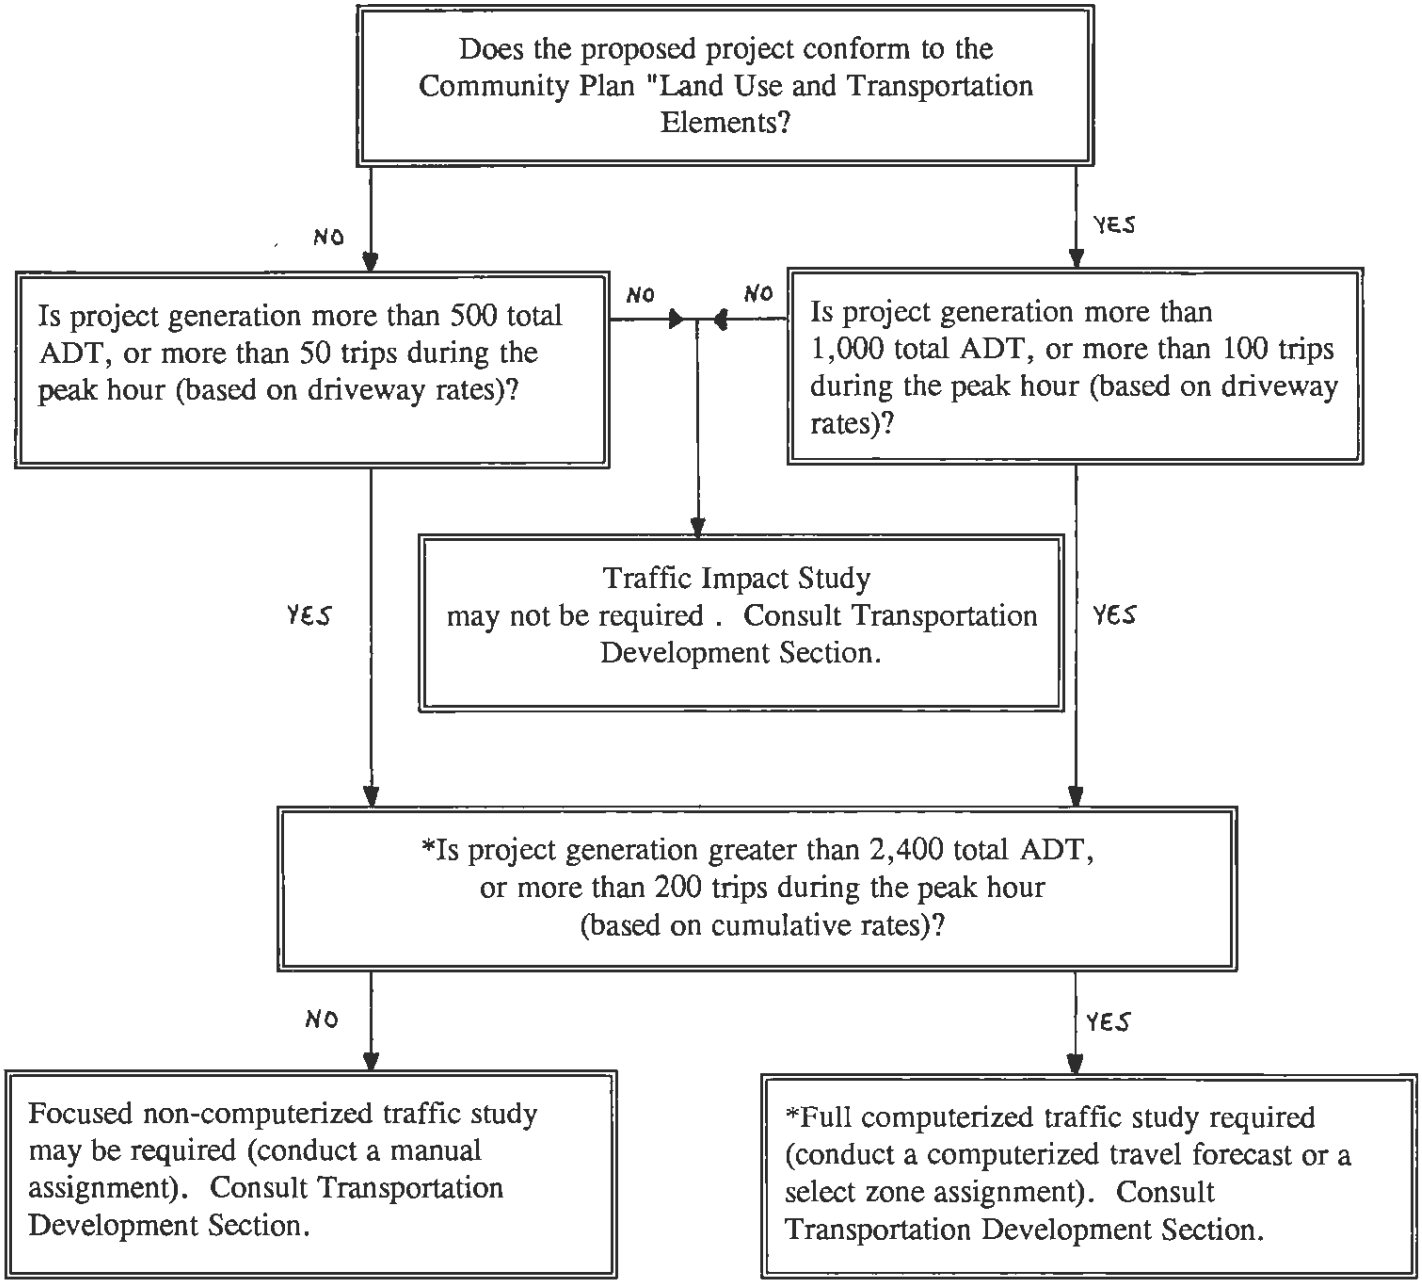
- How should future traffic volumes be determined? Should an adopted community plan forecast be used, should a regional or subregional forecast be used, should growth factors apply, or should a new modeling effort be undertaken?

Figure 1 - Traffic Impact Study Requirement Flow Chart

FIGURE 1

October 1997

TRAFFIC IMPACT STUDY
REQUIREMENT FLOW CHART



*To conform with the 1991 Congestion Management Program Enhanced California Environmental Quality Act (CEQA) review process for traffic analysis.

- How should planned or programmed transportation improvements be accounted for?

- Should the various stages of multi-planned developments be analyzed individually? If so, what horizon years should be used?

- Which trip distribution and assignment methods should be used?

- Which roadway sections and which intersections should be analyzed?

- Which capacity analysis technique should be used?

- Are other analyses needed, such as accident analyses, sight distance analyses, weaving analyses, gap analyses and queuing analyses?

In situations where Caltrans or another agency will review the study, staff from these agencies should be included in the presubmittal conference. This will foster improved coordination and reduce the potential for revisions to the study.

Study Area

The contents and extent of a traffic impact study depend on the location and size of the proposed development and the conditions prevailing the surrounding area. Larger developments proposed in congested areas obviously require a more extensive traffic impact study. Smaller sites may require only minimal analysis. An inappropriately large analysis area will unnecessarily increase costs and time to the developer, the study preparer and the reviewer. In addition, large volumes of meaningless analysis can obscure the real issues that need to be addressed. At a minimum, any traffic impact study must address site access and adjacent intersections, plus the first major signalized intersection in each direction from the site. Beyond this minimum requirement, all known congested or potentially congested locations that may be impacted by the proposed development should be studied. The following methodology based on Average Daily Traffic (ADT), project trip distribution and generalized daily roadway capacity has been prepared to offer some predictability to consultants bidding for jobs and to determine an initial study area to discuss with City staff. Knowledge of the area and judgement may cause the study area to be either expanded or contracted.

Procedure for Determining Initial Study Area

1. Calculate project trip generation based on driveway trip rates and standard City trip generation rates.

2. Determine an approximate project trip distribution and assign the project's ADT to the surrounding street system.

3. Obtain existing configurations and future street classifications for all facilities likely to have site traffic assigned to them.

4. Obtain existing and future ADT for the above mentioned streets.

5. Use the following levels of significance to determine if the project will add enough traffic to street segments for short-term and future conditions to warrant studying this location.

TABLE 1

LEVEL OF SERVICE WITH SITE TRAFFIC	ALLOWABLE INCREASE IN V/C* RATIO WITH SITE TRAFFIC ADDED
A	0.10
B	0.06
C	0.04
D	0.02
E	0.02
F	0.02

* Capacity at level of service E (see **Table 2**) should be used for calculating the volume to capacity ratio.

6. Using **Table 2**, determine the short-term and future level-of-service with and without site traffic, for each link.

In addition, the 1993 Guidelines for Congestion Management Program (CMP) Transportation Impact Reports (TIR) states the following for the study area:

The geographic area examined in the TIR must include the following as a minimum:

- All Regionally Significant Arterial system segments and intersections, including freeway on/off ramp intersections, where the proposed project will add 50 or more peak hour trips in either direction to adjacent street traffic.

- Mainline freeway locations where the project will add 150 or more peak hour trips in either direction.

Staff Consultation

It is critical that the study preparer discuss the project with the reviewing agency's staff engineer at an early stage in the planning process. An understanding as to the level of detail and the assumptions required for the analysis can be determined at this time. While a presubmittal conference is highly encouraged, it will not be a requirement for submitting work to the City. For straightforward studies prepared by consultants familiar with City procedures, a phone call followed by a fax verifying key assumptions may suffice.

Screen Check Procedures

As part of the first draft of a traffic impact study, the preparer must ensure that all required elements have been included. This procedure was implemented to reduce the number of submittals and to encourage earlier dialogue between the reviewer and preparer. The reviewer will check the study for completeness and return all incomplete submittals within five working days of receipt. **Appendix 1** contains the screen check list which the preparer must complete and submit along with the first draft of every traffic impact study. The screen check list should also be used during presubmittal conferences to determine which elements are not required for the proposed study.

Traffic studies shall not be resubmitted until all staff comments have been incorporated. Consultants are encouraged to contact the reviewer to seek clarification, if needed, on comments made to the traffic study. All comments and conditions are subject to appeal or modification.

TABLE 2
Roadway Classifications, Levels of Service (LOS)
and Average Daily Traffic (ADT)

			LEVEL OF SERVICE				
STREET CLASSIFICATION	LANES	CROSS SECTIONS	A	B	C	D	E
Freeway	8 lanes		60,000	84,000	120,000	140,000	150,000
Freeway	6 lanes		45,000	63,000	90,000	110,000	120,000
Freeway	4 lanes		30,000	42,000	60,000	70,000	80,000
Expressway	6 lanes	102/122	30,000	42,000	60,000	70,000	80,000
Primary Arterial	6 lanes	102/122	25,000	35,000	50,000	55,000	60,000
Major Arterial	6 lanes	102/122	20,000	28,000	40,000	45,000	50,000
Major Arterial	4 lanes	78/98	15,000	21,000	30,000	35,000	40,000
Collector	4 lanes	72/92	10,000	14,000	20,000	25,000	30,000
Collector (no center lane) continuous left-turn lane)	4 lanes 2 lanes	64/84 50/70	5,000	7,000	10,000	13,000	15,000
Collector (no fronting property)	2 lanes	40/60	4,000	5,500	7,500	9,000	10,000
Collector (commercial-industrial fronting)	2 lanes	50/70	2,500	3,500	5,000	6,500	8,000
Collector (multifamily)	2 lanes	40/60	2,500	3,500	5,000	6,500	8,000
Sub-Collector (single-family)	2 lanes	36/56	—	—	2,200	—	—

LEGEND:

XXX/XXX = Curb to curb width (feet)/right-of-way width (feet): based on the City of San Diego Street Design. Manual

XX/XXX= Approximate recommended ADT based on the City of San Diego Street Design Manual.

NOTES:

1. The volumes and the average daily level of service listed above are only intended as a general planning guideline.

2. Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.

3. CONTENT AND FRAMEWORK

This chapter discusses the selection of horizon years, time periods to be analyzed and study data needs.

Selection of Horizon Years

The following scenarios should be evaluated in each traffic impact study:

- Existing Conditions
- Existing Conditions with Approved Projects (when applicable)
- Existing Conditions with Approved Projects and Site Traffic
- Buildout Community Plan Conditions
- Buildout Community Plan with Additional Site Traffic
  (if project deviates from the Community Plan)
- Cumulative Analysis Due to Precedence Setting
  (if a land use change will likely encourage other property owners to seek similar land use changes)

Project Phasing

If the project is a large multi-phased development in which several stages of development activity are planned, a number of horizon years may be needed to coincide with each major stage of development or increment of area transportation system improvements. Smaller developments may need to phase themselves to transportation improvements that others are providing, yet are crucial to their accessibility.

Peak Traffic Hours

In general, the traditional morning and afternoon peak hour of the street system should be evaluated in each impact study. The peaking of the adjacent street system can usually be determined by reviewing traffic count data. The time periods that provide the highest cumulative directional traffic demands should be used to assess the impact of site traffic on the adjacent street system and to define the roadway configurations and traffic control measure changes needed in the study area.

In rare cases, weekend and other typically off-peak traffic periods should be studied. These situations may occur with large retail uses, recreational uses, stadiums and theme parks.

Background Study Area Data

All pertinent transportation system and land development information, both short- and long-range, prepared in the last five years or considered to be current by the Transportation Development Section should be reviewed. Any development that has been approved but not yet occupied should be considered for use as background traffic. Average daily traffic counts and peak hour turning movements can frequently be obtained through the City's Traffic Safety Information and Research Section in the Traffic Engineering Division.

The count data used in traffic impact studies should be no more than two years old. If recent traffic data is not available from the City, current counts must be made by the consultant.

Field Reconnaissance and Data Collection

The assembly of available data should be accompanied by a detailed reconnaissance of the project site, area roadways and the surrounding vicinity. Current data should also be collected as necessary to supplement that information already available. These data frequently include some or all of the following:

- Peak period turning movement counts
- Machine counts
- Primary traffic control devices
- Signal timing and phasing
- Roadway configurations, geometric features and intersection lane configurations
- Parking regulations and usage
- Driveways serving sites across from or adjacent to the site
- Transit stops
- Adjacent land uses

4. NON-SITE TRAFFIC

Estimates of non-site traffic are required to complete an analysis of horizon year conditions. These estimates characterize the base conditions (without site traffic). There are a number of methods for developing non-site traffic; the appropriate method depends largely on the availability of data.

Build-up Method Using Specific Developments

This method is used when other projects in the area have been approved, but are not yet occupied. This concept consists of projecting peak hour traffic to be generated by approved developments in the study area, and assigning it to the projected street system. This method is used for the "Existing Conditions with Approved Projects" scenario. A list of "other" projects can be obtained from the City's Transportation Development Section.

Community Plan, Regional or Subregional Modeled Volumes

The adopted community plan should be used for 20-year or buildout area wide conditions, when reliable information exists. Often times, this information is out-dated and its use would render unreasonable results. In these cases, regional or subregional models conducted by SANDAG should be reviewed for appropriateness.

When justified, and particularly in the case of very large developments or new community plans, a transportation model should be run, with and without the new development to show the net impacts on all parts of the area's transportation system.

Trends or Growth Rates

Trends or growth rates should be used only in situations where a transportation model does not exist, no new major transportation facilities are planned for the area, and the area's growth rate has been stable. Average daily traffic volumes from the past five to ten years should be used to develop these growth rates. If other major new developments are expected in the area, a combination of the growth rate and build-up method should be considered.

Cumulative Analysis Due to Precedence Setting

Often times, a land use change on one property may have the effect of encouraging other property owners to ask for the same zoning or intensification, particularly if the change has an appreciable impact on property values.

The Transportation Development Section in consultation with other City staff, decides if a cumulative analysis should be conducted and which properties should be included in the analysis. The Transportation Development Section in consultation with the traffic consultant will decide the appropriate methodology for developing these non-site traffic volumes.

5. SITE TRAFFIC GENERATION

One of the most critical elements of the traffic impact study is estimating the amount of traffic to be generated by a proposed development. This is usually done by using trip generation rates or equations.

Rates are commonly expressed in trips per unit of development. Equations provide a direct estimate of trips based upon development units being multiplied in a mathematical relationship. Trips are defined as a single or one-directional travel movement with either an origin or destination of the trip inside the study site. The outcome of the entire traffic impact study can depend solely on the question of appropriate trip generation estimates. Trip generation estimates must be determined carefully and must be defensible using a combination of available data and professional judgement.

General Procedure

The following basic steps should be followed in determining the appropriate trip generation estimates:

- Check the City of San Diego's Trip Generation Manual for trip generation rates of similar land use types. If rates other than those included in this manual are proposed, the consultant should obtain concurrence from the study reviewer prior to submitting a study.

- If City data does not exist, check for appropriate SANDAG data or national data, typically contained in SANDAG's “Traffic Generators” publication or the ITE Trip Generation Manual or ITE Journal articles.

- If local or sufficient national data do not exist, conduct trip generation studies at sites with characteristics similar to those of the proposed development.

- Determine any adjustments that may be applied to trip rates to account for specific characteristics of the development in question (high transit usage or true mixed-used developments).

- Select the most appropriate and defensible trip generation rate or equations and document the basis for selection if the rates vary from standard City rates.

Special or Unusual Generators

Some unique land uses have never been studied for trip generation characteristics. In these cases, it may be necessary to conduct a trip generation study on a similar use to

determine the appropriate trip generation rate for that use. In some instances, it may be acceptable to assume a trip rate, based on comparisons to other uses. In either case, the Transportation Development Section should be consulted.

Driveway Volumes Versus Traffic Added to the Adjacent Streets

It is usually assumed that all trips entering and exiting a new development are new trips that were not made to or through the area prior to the development being completed. However, a portion of these trips may be "captured" from trips already being made to other existing developments on the adjacent street system. Any commercial real estate agent will confirm that the three most important factors in a successful retail business are location, location and location. This phenomenon has been verified by limited studies of commercial sites. The City's Trip Generation Manual has recommended a percentage reduction in driveway trip generation rates for numerous retail uses. These recommendations are based on local and national trip generation studies, as well as SANDAGS's Travel Behavior Study conducted in 1985. The pass-by reduction includes true pass-by trips that were on an adjacent street and a portion of the linked trips that were diverted off a nearby route. The report must clearly indicate the new trips and the pass-by trips for the site. All site access points should be evaluated using the higher driveway rates, whereas far off intersections will be evaluated using the reductions for pass-by trips. The next chapter provides guidance on how to distribute and assign pass-by trips.

Refer to the City's "Trip Generation Manual" for driveway and cumulative trip rates for various land uses.

Adjustments for Developments Near Transit Stations

Most trip generation data are from suburban locations where little or no public transportation exists. Since San Diego has an expanding mass transit system, with opportunities for land use/transit interaction, adjustments to the standard trip generation rates may be necessary. The following trip rate reductions are allowable for development planned within a walking distance of 1,500 feet from a transit station:

TABLE 3
Recommended Trip Reductions at Transit Stations

LAND USE TYPE	DAILY	A.M. PEAK	P.M. PEAK
Residential	5%	9%	6%
Industrial	5%	6.5%	5.5%
Commercial Office	3%	5.5%	2%
Commercial Retail	N/A	N/A	N/A

Adjustments for Mixed-Use Developments

Most of the trip generation rate data available have been developed from measurements at isolated single-use developments. When uses are combined, simply adding the single-use estimates together can result in a total trip generation estimate that is too great for the site. The following trip generation rate reductions are allowable for mixed-use projects:

TABLE 4
Recommended Trip Reductions for Mixed-Use Developments
Which Include Commercial Retail

LAND USE TYPE	DAILY	A.M. PEAK	P.M. PEAK
Residential	10%	8%	10%
Industrial	4%	5%	5%
Commercial Office	3%	5%	4%
Commercial Retail	*	*	*

Source: Kris Berg - Kimley Horn

NOTES:

* The commercial retail reduction equals the sum of the total mixed-use reduction in residential, industrial and commercial office.

\- These reductions apply to commercial retail of a minimum of 100,000 square feet which is predominantly neighborhood-oriented.

6. SITE TRAFFIC DISTRIBUTION AND ASSIGNMENT

Traffic expected to be generated by a development project must be distributed and assigned to the roadway system so that the impacts of the proposed project on roadway links and intersections within the study area can be analyzed. The trip distribution step produces estimates of trip origins and destinations. The assignment step produces estimates of the amount of site traffic that will use each access route between origins and destinations.

Trip Distribution

One way to determine a trip distribution for a site is to use data from a computerized travel forecast model. SANDAG, the regional planning agency for San Diego County, maintains a regional travel forecast computer model to project future traffic volumes. The City also prepares "community plan" level forecast models. The City models usually provide a more detailed street system than does SANDAG's latest regional model. Raw modeled results should never be directly applied. A thorough review for reasonableness should first be undertaken.

Frequently, computerized travel forecast model data are not available or may not be up to date. In these cases, manual estimates based on traffic volumes, experience, judgement, and knowledge of the area are appropriate. Previous traffic impact studies conducted for other projects in the area should also be considered in estimating trip distributions.

Regardless of the trip distribution methodology used, it is crucial that the traffic consultant and the reviewer of the study agree on the proper distribution prior to the preparation of detailed analysis to avoid having to rework the analysis.

Trip Assignment

Trip assignment should be made considering logical routings, available capacities, left turns at critical intersections, and projected (and perceived) minimum travel times. Multiple paths should often be assigned between origins and destinations to achieve realistic estimates, rather than assigning all trips to the route with the shortest travel time.

The assignment should reflect the horizon year(s) and should consider land use and road improvements at that time. Assignments may vary between morning and afternoon peaks. The assignment should be carried out through external site access points and, in larger projects, the internal roadways.

Assignments may be performed manually or by a computer model. For large sites, with large study areas, it may be advantageous to use a computer model to assign site traffic. This allows some matching of trip origins and destinations within the study area, rather than assigning all site trips externally.

Pass-by Trips

As mentioned in the previous chapter, trip generation analysis yields the number of vehicle trips that a site is expected to generate at its driveways, and retail sites don't add as much traffic to the community street system since a portion of their trips are simply diverted from vehicle trips already on the roadway system. If a reduction for pass-by trips is to be applied, the cumulative trip generation rates identified in the City's Trip Generation Manual should be used as follows:

- For the peak hour being analyzed, determine the percentage of pass-by trips. Split the total trip generation into new trips and pass-by trips.

- In addition to estimating normal trip distribution (for new trips), also estimate the distribution for pass-by trips (giving strong consideration to the commuting work trip).

- Perform two separate trip assignments, based on the two trip distributions. Pass-by assignment percentages should not automatically be applied to two-way traffic since an outbound pass-by trip may use a different route than an inbound pass-by trip. Also, the pass-by procedure implies subtracting trips from some existing movements and assigning to other movements. Care must be taken not to subtract a relatively large movement from a low volume facility. For this reason, the pass-by reduction on any given facility shall be no more than ten percent of the volume on that facility. It would be unreasonable to assume that more than one out of ten drivers would divert to a site on a daily basis.

- Combine the results of the "new trips" and "pass-by" assignments.

Congestion Management Program Procedures

The Congestion Management Program (CMP) requires that a regional travel forecast model be used to assign site traffic to the CMP roadway system. This applies to all developments generating more than 2,400 daily trips or 200 pm peak hour trips. For these developments, it is necessary to perform a select zone traffic assignment for site traffic to identify the project's impact on the CMP roadway system.

7. ANALYSIS

This chapter describes the analytical techniques used to derive the study findings, conclusions, and recommendations. This recognizes current methodologies. However, other techniques may be considered once they are developed or unique problems are encountered. This chapter attempts to provide guidance on the proper analysis technique to be applied; it does not attempt to document any particular analysis technique or preclude the use of any technique not specifically mentioned. Analysis techniques should be discussed by the preparer and reviewer of the traffic impact study prior to beginning the study.

Total Traffic Estimate

For each analysis period being studied, a projected total traffic volume must be estimated for each segment of roadway system being analyzed.

Identification of Impacts and Deficiencies

Acceptable Level of Service

The standard used to evaluate traffic operating conditions of the transportation system is referred to as level of service. This is a qualitative assessment of the quantative effect of factors such as speed, volume of traffic, geometric features, traffic interruptions, delays and freedom to maneuver. The acceptable level of service standard for roadways and intersections in San Diego is level of service D. However, for undeveloped locations, the goal is to achieve a level of service C.

Levels of Significance

To determine if a project contributes enough traffic to a transportation facility to consider mitigation measures, a level of significance threshold is used. **Table 5** identifies the levels of significance for several analysis techniques at varying levels of service. If the project causes a change greater than the level shown, the developer is considered to be responsible for all or part of the improvements required to mitigate the site traffic to the level previously held on the facility prior to the project's traffic impacts.

Signalized Intersection Analysis

The measure of effectiveness for signalized intersections is average stopped delay per vehicle. The current Highway Capacity Manual's signalized intersection operational methodology is the basis for determining intersection delay. The Highway Capacity Software (HCS), based on the HCM methodology, is acceptable except in cases of extreme congestion, where alternative software must be used to obtain average

seconds of delay. Alternative acceptable software includes TRAFFIX, SIGNAL 94 and NCAP. These methodologies require numerous inputs and assumptions. To ensure consistency among consultants (and City staff), the City has developed input guidelines shown in **Table 6**. These guidelines are not intended to be absolute, but any proposed deviations should first be discussed with City staff.

TABLE 5
Significant Transportation Impact Measure

LEVEL OF SERVICE WITH PROJECT	ALLOWABLE INCREASE/DECREASE DUE TO PROJECT IMPACTS*		
	INTERSECTIONS	ROADWAY SECTIONS	
	DELAY (SEC)	V/C	SPEED (MPH)
A	N/A	0.10	5
B	6	0.06	3
C	4	0.04	2
D**	2	0.02	1
E**	2	0.02	1
F**	2	0.02	1

NOTES:

* If a proposed project's impact exceed the values shown in the table, then the impacts are deemed "significant." The project applicant shall identify "feasible mitigations" to bring the facility back to the level previously held by the facility prior to the project's traffic impacts.

** The acceptable level of service standard for roadways and intersections in San Diego is level of service D. However, for undeveloped locations, the goal is to achieve a level of service C.

KEY: DELAY = Average stopped delay per vehicle measured in seconds
V/C = Volume to Capacity Ratio [capacity at level of service E should be used (Use Table 1.)]
SPEED = Arterial speed measured in miles per hour
N/A = Not Applicable

Signal Warrant Analysis

If new intersections are being created by a development or if a development adds traffic to existing unsignalized intersections, traffic signal warrant analyses must be performed. The Caltrans Traffic Manual should be consulted for procedures on conducting signal warrant analysis. Typically, the warrant based on Estimated Average Daily Traffic is used. For selected locations, the School Crossing Traffic Signal Warrant should be considered.

TABLE 6
Inputs and Assumptions for Intersection Capacity Analysis
Using the Highway Capacity Manual (HCM) Method

- Arrival Type = 3-5
- Cycle Length © = 60-120 seconds (or observed at existing locations)
- Ideal Saturation Flow Rate for HCM software = 1,900 pcphpl
- Minimum Green for each phase = 5-10 seconds
- Yellow Interval:

85% Approach Speed (mph)	*Yellow Interval (seconds)
35 or less	3.0
40	3.5
45	4.0
50	4.5
55	5.0
60	5.5

*Add 1 second for an all-red interval at all intersections.

- Minimum Heavy Vehicles = 2-4%
- Peak Hour Factor (PHF) = 0.80-0.95
- Minimum Pedestrians = 10/hour/approach

The following factors are used to convert daily volumes to peak hour volumes:

- Directional Factor (D) = 0.55-0.75
- Design Hour Factor (K) = 0.07-0.11
- Peak Hour Peak Direction = 0.05-0.08

NOTES:

1. Arrival Type 4 or 5 should be used for intersection approaches which are part of a coordinated arterial system.
2. Ideal Saturation Flow rate inputs may be higher than 1,900 pcphpl for individual movements at intersections with very high traffic volume. The use of higher saturation flow rate must be identified.
3. Level of Service F is not acceptable for intersection approaches except for side streets on an interconnected arterial system.
4. The 85% speeds can be obtained from the City's Traffic Engineering Division, Traffic Safety Information and Research Section.

When a new signal is proposed on a major arterial where a coordinated signal progression system exists or may exist, the impacts of adding a new signal on progression should be thoroughly analyzed, The software recommended for this analysis is PASSER II, Synchro or TRANSYT-7F.

Unsignalized Intersection Analysis

The measure of effectiveness for unsignalized intersections is average total delay per vehicle. Total delay is defined as the total elapsed time from when a vehicle stops at the end of the queue until the vehicle departs from the stop line. This methodology is described in Chapter 10 of the current Highway Capacity Manual. This methodology should be used for unsignalized intersections, yield and T-intersections.

Arterial Analysis

All arterials within the study area should be evaluated using the Daily Level of Service matrix shown in **Table 2** (shown in Chapter 2 of this manual). The results of this analysis may not accurately reflect actual peak hour operation of the street, but is intended as a guide to help determine arterial classification and sizing.

The Congestion Management Program arterials must be analyzed in greater detail. These arterials must be evaluated using the peak hour analysis contained in Chapter 11 of the current Highway Capacity Manual. This methodology uses the results of signalized intersection analyses, the arterial classification and free flow speed to calculate an average travel speed. The average travel speed is used to determine the arterial level of service. The HCS computer software may be used to determine arterial level of service.

Freeway Interchange Analysis

Since all freeways are on the Congestion Management Program system, their interchanges must be evaluated using CMP analysis techniques. All signalized intersections of freeway ramps with arterials should be evaluated using the Highway Capacity Manual signalized intersection operational method. For diamond interchanges, the timing and phasing of the two signals must be coordinated to ensure queue clearances. The software package recommended for this analysis is Passer III-90.

If ramp metering is to occur, the effects of metering should be analyzed. Inputs to this analysis are peak hour demands, flow rates, and ramp geometrics. The flow rates and ramp configurations are usually available from Caltrans. Outputs are excess demand, delay and queue length. This methodology is explained in **Appendix 2**.

8. SITE ACCESS AND OFF-SITE IMPROVEMENTS

Recommendations

During the final phase of the study, all analyses are reviewed and reassessed to best respond to the actual transportation needs of the project and the adjacent area. It is important that recommendations be made at each of the scenarios identified in Chapter 3, so that the responsibility for the improvements can be clearly established. All necessary improvements should be displayed on a study area map. A table shall be prepared identifying which improvements are needed, when they are needed and who is responsible for the improvements.

Project Phasing

In situations where an improvement is the responsibility of someone else or a joint responsibility, it may be necessary for the proposed development to be phased or for the developer to front the entire cost of an improvement(s). At the developer's option, a reimbursement district can be established. Where multiple improvements are needed, it may be advantageous to phase a development and associated improvements over time, to avoid large up front mitigation expenses. Appropriate analyses are required to permit projects to be phased.

Intersection Lane Configurations

Diagrams of typical intersection lane configurations are shown in **Appendix 4**. There are a number of lane configurations that can be used depending on the intersecting streets. Additional left-turn lanes, dual left-turn lanes and separate right-turn lanes will be based on the intersection turn volumes and level-of-service.

9. ON-SITE PLANNING AND PARKING

An integral part of an overall traffic impact study relates to basic site planning principles. Internal design will have a direct bearing on the adequacy of site access points.

Access Points

Access points should be designed with the same perspective as public streets. Site access points should be located and designed in accordance with the San Diego Regional Standard Drawings and the following guidelines:

- Driveways should align with opposing streets and driveways, if no raised center median exists on the cross street.

- If not aligned, adequate spacing should be maintained from adjacent street and driveway intersections. Distance between driveways and adjacent street intersections should be sufficient to minimize driveway blockage by queues from adjacent intersections.

- If the driveway is proposed to be signalized, it should be located to facilitate traffic progression past the site. A signal progression analysis may be required in such a situation. Curb return type access is allowed for signalized driveways.

- Access driveways should intercept traffic approaching the site as efficiently as possible; adequate inbound and outbound capacity should be provided.

- Adequate driveway capacity should be provided. The number of driveways should be compatible with site access capacity needs and should minimize adverse impacts on adjacent roads. A capacity analysis, gap check or lane adequacy check should be conducted for each driveway. Joint access should be considered where several adjacent properties have relatively short frontages or where low-volume driveways would otherwise result.

- Two-way driveways should intersect adjacent roadways at 90-degree angles, wherever possible.

- The capacity of on-site intersections should be sufficient to prevent traffic entering the site from backing up on the adjacent street.

- Traffic safety aspects of all proposed site access facilities should be reviewed to ensure adequate sight distance and other applicable factors.

- Deceleration and acceleration lanes may be required on the City street at the access driveway.

Vehicular Queuing Storage

Provision for appropriate vehicular exit queuing should be made at all access drives for a development. For small developments, parking areas and access points should be designed so drivers waiting to exit can align their vehicles perpendicular to the off-site roadway system. For large developments, queuing areas should be sufficient so that vehicles stored at exits do not block internal circulation and so that drivers enter a signalized intersection at minimum headways to achieve maximum flow rates. The queue storage just inside a parking facility should be sufficient to allow vehicles to enter the parking facility and come to a complete stop without blocking or hampering internal circulation and without causing traffic to back up on the off-site roadway.

Drive-through developments such as banks, car washes and fast food restaurants, should be provided with adequate capacity to accommodate normal peak queues.

Internal Vehicular Circulation

Internal circulation roadways should permit access between all areas in a manner which is safe, has adequate capacity, and is clearly understandable to the driver.

Service and Delivery Vehicles

Service and delivery vehicles require separate criteria for movement to and from site:

- Vehicle turning paths should be sufficient to accommodate the largest vehicles anticipated to travel on the site.

- Access points anticipated to be used by service vehicles should have turning paths sufficient to allow service to enter and exit the site without encroaching upon opposing lanes or curbed areas.

- There should be sufficient separation between external and internal circulation roads so large vehicles can be queued on entry or exit without blocking access to parking spaces or internal roadway circulation systems.

- Service vehicle routes should be as direct as possible.

- The number of loading berths provided should be sufficient to accommodate anticipated service and delivery activity.

Emergency Vehicle Access

- Entrance curb to curb widths must be 20 feet minimum.
- An emergency vehicle only access shall be restricted with a chain, gate or bollard, and properly signed to the satisfaction of the Fire Department.
- Extra aisle widths may be required adjacent to fire hydrants.
- “No Parking - Fire Lane” signs may be required on-site.

Parking

Adequate parking should be provided to meet site generated demands. On-site parking should be provided in accordance with the Transportation Development Section's recommended parking ratios shown in **Appendix 3**. Minimum parking requirements may vary where superseded by the San Diego Municipal Code. Parking should be dispersed throughout the site for convenience to destinations. The Municipal Code addresses parking lot design considerations.

Shared parking is a valid approach to the determination of total parking needs of any mixed use development. Close building proximity and efficient internal circulation systems and access drives are necessary for shared parking to be successful. **Appendix 3** also contains procedures for reducing parking requirements for mixed-use developments.

For major developments, bicycle parking should be provided at a ratio of two spaces per 100 auto parking spaces.

The location of bicycle parking and carpool or vanpool parking should be in close proximity to the building entrances.

Pedestrian, Transit and Bicycle Considerations

The overall site plans should also consider public transportation, pedestrians, and bicyclists. Appropriate public transportation facilities and shuttle bus staging areas should be accommodated adjacent to service drives and entrance areas, at key locations along circulation drives or at major pedestrian focal points along the roadway system. Pedestrian connections between these facilities, public sidewalks and the site buildings should be integrated in the overall design of the project. Proper design of pedestrian facilities can reduce the use of motor vehicles for trips within a development and between nearby developments.

APPENDIX 1

SCREEN CHECK

CITY OF SAN DIEGO
TRANSPORTATION DEVELOPMENT SECTION
TRAFFIC IMPACT STUDY
SCREEN CHECK

To be completed by City Staff:
Date Received _____
Reviewer _____
Date Screen Check ____

To be completed by consultant (including page #):
Name of Traffic Study _____
Consultant _____
Date Submitted _____

Indicate Page # in report:			Satisfactory YES	NO	NOT REQUIRED
pg. ___	1.	Table of contents, list of figures and list of tables.	☐	☐	
pg. ___	2.	Executive summary.	☐	☐	
pg. ___	3.	Map of the proposed project location	☐	☐	
	4.	General project description and background information:			
pg. ___		a. Proposed project description (acres, dwelling units....)	☐	☐	
pg. ___		b. Total trip generation of proposed project.	☐	☐	
pg. ___		c. Community plan assumption for the proposed site.	☐	☐	
pg. ___		d. Discuss how project affects the Congestion Management program.	☐	☐	
pg. ___	5.	Parking, transit and on-site circulation discussions are included.	☐	☐	
pg. ___	6.	Map of the Transportation Impact Study Area and specific intersections studied in the traffic report.	☐	☐	
pg. ___	7.	Existing Transportation Conditions:			
		a. Figure identifying roadway conditions including raised medians, median openings, separate left and right turn lanes, roadway and intersection dimensions, bike lanes, parking, number of travel lanes, posted speed, intersection controls, turn restrictions and intersection lane configurations.	☐	☐	
		b. Figure indicating the daily (ADT) and peak hour volumes.	☐	☐	
		c. Figure or table showing level of service (LOS) for intersections during peak hours and roadway sections within the study area (analysis sheets included in the appendix).	☐	☐	
	8.	Project Trip Generation:			
pg. ___		Table showing the calculated project generated daily (ADT) and the peak hour volumes.	☐	☐	
pg. ___	9.	Project Trip Distribution using the current TRANPLAN Computer Traffic Model (provide a computer plot) or manual assignment if previously approved. (Identify which method was used.)	☐	☐	
	10.	Project Traffic Assignment:			
pg. ___		a. Figure indicating the daily (ADT) and peak hour volumes.	☐	☐	
pg. ___		b. Figure showing pass-by-trip adjustments, if cumulative trip rates are used.	☐	☐	☐
	11.	Existing + Other Pending Projects:			
pg. ___		a. Figure indicating the daily (ADT) and peak hour volumes.	☐	☐	
pg. ___		b. Figure or table showing the projected LOS for intersections during peak hours and roadway sections within the study area (analysis sheets included in the appendix).	☐	☐	
pg. ___		c. Traffic signal warrant analysis for appropriate locations (signal warrants included in the appendix).	☐	☐	

		Satisfactory YES	NO	NOT REQUIRED
	12. Existing + Other Pending Projects + Project (short term cumulative):			
pg. ____	a. Figure or table showing the projected LOS for intersections during peak hours and roadway sections with the project (analysis sheets included in the appendix).	☐	☐	
pg. ____	b. Figure showing other projects that were included in the study, and the assignment of their site traffic.	☐	☐	
pg. ____	c. Traffic signal warrant analysis for appropriate locations (signal warrants in the appendix).	☐	☐	
	13. Build-out Transportation Conditions (if project conforms to the community plan):			
pg. ____	a. Build-out ADT and street classification that reflect the community plan.	☐	☐	☐
pg. ____	b. Figure or table showing the build-out LOS for intersections during peak hours and roadway sections with the project (analysis sheets included in the appendix).	☐	☐	☐
pg. ____	c. Traffic signal warrant analysis at appropriate locations (signal warrants included in the appendix).	☐	☐	☐
	14. Build-out Transportation Conditions (if project does not conform to the community plan).			
pg. ____	a. Build-out ADT and street classification as shown in the community plan.	☐	☐	☐
pg. ____	b. Build-out ADT and street classification for two scenarios: with the proposed project and with the land use assumed in the community plan.	☐	☐	☐
pg. ____	c. Figure or table showing the build-out LOS for intersections during peak hours and roadway sections for two scenarios: with the proposed project and with the land use assumed in the community plan (analysis sheets included in the appendix).	☐	☐	☐
pg. ____	d. Traffic signal warrant analysis at appropriate locations with the land use assumed in the community plan (signal warrants included in the appendix).	☐	☐	☐
pg. ____	15. A summary table showing the comparison of Existing, Existing + Other Pending Projects, Existing + Other Pending Projects + Proposed Project, and Buildout, LOS on roadway sections and intersections during peak hours.	☐	☐	
	16. Transportation Mitigation Measures.			
pg. ____	a. Table identifying the mitigations required that are the responsibility of the developer and others. A phasing plan is required if mitigations are proposed in phases.	☐	☐	
pg. ____	b. Figure showing all proposed mitigations that include: intersection lane configurations, lane widths, raised medians, median openings, roadway and intersection dimensions, right-of-way, offset, etc.	☐	☐	
pg. ____	17. The traffic study is signed by a California Registered Traffic Engineer.	☐	☐	
pg. ____	18. The Highway Capacity Manual Operational Method or other approved method is used at appropriate locations within the study area.	☐	☐	
pg. ____	19. Analysis complies with Congestion Management requirements.	☐	☐	☐
pg. ____	20. Appropriate freeway analysis is included.	☐	☐	☐
pg. ____	21. Appropriate freeway ramp metering analysis is included.	☐	☐	☐

APPENDIX 2

RAMP METER ANALYSIS

APPENDIX 2. RAMP METERING ANALYSIS

Ramp metering analysis should be performed for each horizon year scenario in which ramp metering is expected. The following table shows relevant information that should be included in the ramp meter analysis (calculations are shown in the footnotes):

LOCATION	DEMAND[1] (veh/hr)	METER RATE[2] (veh/hr)	EXCESS DEMAND[3] (veh/hr)	AVERAGE DELAY[4] (veh/hr)	AVERAGE QUEUE[5] (feet)
I-5/Carmel Mountain Road (SB/AM Peak)	985	788	197	15.0[6]	4,925
I-5/Carmel Mountain Road (SB/PM Peak)	510	1,000	0	0	0

Notes:

[1] DEMAND is the peak hour demand expected to use the on-ramp.

[2] METER RATE is the peak hour capacity expected to be processed through the ramp meter. This value is usually available from Caltrans.

[3] EXCESS DEMAND = (DEMAND) – (METER RATE) or zero, whichever is greater

[4] AVERAGE DELAY = $\frac{\text{EXCESS DEMAND}}{\text{METER RATE}}$ * 60 minutes/hour

[5] AVERAGE QUEUE = (EXCESS DEMAND) * 25 feet/vehicle

[6] Ramp meter delays above 15 minutes are not acceptable.

APPENDIX 3

PARKING REQUIREMENTS

Transportation Development Section
Parking Rates Used for Discretionary Review

LAND USE	RATE
RESIDENTIAL USES	
Single-family Residential	2 per dwelling
Multifamily Residential	
Resident Portion	
Studio	1.00 per dwelling unit
One bedroom	1.25 per dwelling unit
Two bedroom	1.50 per dwelling unit
Three or more bedrooms	1.75 per dwelling unit
Supplemental Portion	
General	Add 30% of resident portion*
Beach or Campus impact area	Add 50% of resident portion*
Transit Reductions*	
Transit Corridor	0.10 of supplemental
Nodal Corridor/Transfer Node	0.20 of supplemental
Transit Node	0.30 of supplemental
Transit Hub	0.60 of supplemental
Density Reductions*	
42-72 units per acre	0.10 of supplemental
73-142 units per acre	0.20 of supplemental
143 or more units per acre	0.30 of supplemental
Commercial Use Reductions*	
4% to 8.9% gross floor area	0.10 of supplemental
9% to 12.9% gross floor area	0.20 of supplemental
13% or more gross floor area	0.30 of supplemental
Common Area Portion	In planned urbanizing areas only, 20% of resident and supplemental spaces must be located in a common area

(see next page for additional land uses)

NOTES:

- These parking rates are subject to change.

* If a PDO exists, parking requirements may vary from the above rates.

OTHER LAND USES

Hotel	1 per guest room
Restaurant	
Free-standing building	1 per 60 gross sq. ft.
Combined in project	1 per 80 gross sq. ft.
Banquet Room	1 per 80 gross sq. ft.
Retail	1 per 200 gross sq. ft.
Medical Office	1 per 250 gross sq. ft.
Commercial Office	1 per 300 gross sq. ft.
Scientific Research and Development	1 per 400 gross sq. ft.
Library	
With high meeting room use	1 per 175 gross sq. ft.
Without high meeting room use	1 per 200 gross sq. ft.
Daycare Center	
Staff	1 per each adult (1 per 6 students)
Loading/unloading area	Add 1 per 12 students
Hospital	
With transit	1.75 per bed
Without transit	2 per bed
Convalescent Hospital	1 per 3 beds
Theatre	
1-3 screens	1 per 3 seats
4 or more screens	1 per 3.3 seats
Church	1 per 3 seats
Health Club	1 per 200 gross sq. ft.
Marina	1 per 3 boat slips
General Aviation Airport	
Parking in hangars/tiedowns	9 per 100 hangars/tiedowns
No parking in hangars/tiedowns	27 per 100 hangars/tiedowns
Industrial	1 per 400 gross sq. ft.
Warehousing	
Storage area	1 per 1,000 gross sq. ft.
Office area	1 per 300 gross sq. ft.

NOTES:

- These parking rates are subject to change.
- If a PDO exists, parking requirements may vary from the above rates.

§ 142.0540 Cont'd Footnote to Table 142-05G

(1) The City Engineer will determine whether a *lot* has adequate *alley* access according to accepted engineering practices.

(b) Exceeding Maximum Permitted Parking. Development proposals may exceed the maximum permitted automobile parking requirement shown in Tables 142-05D, 142-05E, and 142-05F with the approval of a Neighborhood Development Permit, subject to the following:

(1) The *applicant* must show that the proposed parking spaces are required to meet anticipated parking demand, will not encourage additional automobile trips, and will not result in adverse site design impacts; and

(2) The number of automobile parking spaces provided shall not be greater than 125 percent of the maximum that would otherwise be permitted.

(c) Varying From Minimum Parking Requirements. Development proposals may, at the applicant's option, vary from the minimum parking requirements of this division with the approval of a Transportation Demand Management (TDM) Plan and Site Development Permit decided in accordance with Process Three, subject to the following requirements.

(1) The TDM Plan shall be designed to reduce peak period automobile use with such techniques as carpooling, vanpooling, transit, bicycling, walking, telecommuting, compressed work weeks, or flextime.

(2) To compensate for a reduction in parking, the TDM Plan shall specify only those measures that would not otherwise be required by this division.

(3) In no case shall the number of automobile parking spaces provided be less than 85 percent of the minimum that would otherwise be required.

(4) The *applicant* shall show that the TDM Plan adequately mitigates the proposed reductions in automobile parking.

(5) The owner shall set aside land for a parking facility or allow for future construction or expansion of a structured parking facility that is sufficient to provide additional parking spaces equal in number to the number reduced.

(6) In the event of noncompliance with the TDM Plan, the City Manager shall require the owner to construct additional parking spaces equal in number to the spaces originally reduced.

§ 142.0545 Shared Parking Requirements

(a) Approval Criteria. In all zones except single unit residential zones, *shared parking* may be approved through a Building Permit subject to the following requirements.

(1) *Shared parking* requests shall be for two or more different land uses located adjacent or near to one another, subject to the standards in this section.

(2) All *shared parking* facilities shall be located within a 600-foot horizontal distance of the uses served.

§ 142.0545 Cont'd

(3) Parties involved in the shared use of a parking facility shall provide an agreement for the shared use in a form that is acceptable to the City Attorney.

(4) *Shared parking* facilities shall provide *signs* on the *premises* indicating the availability of the facility for patrons of the participating uses.

(5) Modifications to the *structure* in which the uses are located or changes in tenant occupancy require review by the City Manager for compliance with this section.

(b) Shared Parking Formula. *Shared parking* is based upon the variations in the number of parking spaces needed (parking demand) over the course of the day for each of the proposed uses. The hour in which the highest number of parking spaces is needed (peak parking demand) for the proposed *development*, based upon the standards in this section, determines the minimum number of required *off-street parking spaces* for the proposed *development*.

(1) The *shared parking* formula is as follows:

A, B, C	=	proposed uses to share parking spaces
PA	=	parking demand in the peak hour for Use A
PB	=	parking demand in the peak hour for Use B
PC	=	parking demand in the peak hour for Use C
HA%	=	the percentage of peak parking demand for Use A in Hour H
HB%	=	the percentage of peak parking demand for Use B in Hour H
HC%	=	the percentage of peak parking demand for Use C in Hour H
P(A, B, C)	=	peak parking demand for Uses A, B and C combined

Formula:

P(A, B, C) = (PA x HA%) + (PB x HB%) + (PC x HC%),
where H = that hour of the day (H) that maximizes P(A, B, C)

(2) Table 142-05G contains the peak parking demand for selected uses, expressed as a ratio of parking spaces to *floor* area.

(3) Table 142-05H contains the percentage of peak parking demand that selected uses generate for each hour of the day (hourly accumulation curve), in some cases separated into weekdays and Saturdays. The period during which a use is expected to generate its peak parking demand is indicated as 100 percent, and the period during which no parking demand is expected is indicated with "-".

(4) The parking demand that a use generates in a particular hour of the day is determined by multiplying the peak parking demand for the use by the percentage of peak parking demand the use generates in that hour.

(5) The parking demand of the proposed *development* in a particular hour of the day is determined by adding together the parking demand for each use in that hour.

§ 142.0545 Cont'd

(6) The minimum number of required *off-street parking spaces* for the proposed *development* is the highest hourly parking demand.

(7) Uses for which standards are not provided in Tables 142-05H and 142-05I may nevertheless provide *shared parking* with the approval of a Neighborhood Development Permit, provided that the *applicant* shows evidence that the standards used for the proposed *development* result in an accurate representation of the peak parking demand.

(c) Single Use Parking Ratios. *Shared parking* is subject to the parking ratios in Table 142-05H.

Table 142-05H
Parking Ratios for Shared Parking

Use	Peak Parking Demand (Ratio of spaces per 1,000 square feet of floor area unless otherwise noted. Floor area includes gross floor area plus below grade *floor* area and excludes floor area devoted to parking)	Transit Area[1]
Office (except medical office)		
Weekday	3.3	2.8
Saturday	0.5	0.5
Medical office		
Weekday	4.0	3.4
Saturday	0.5	0.5
Retail sales	5.0	4.3
Eating & drinking establishment	15.0	12.8
Cinema 1-3 screens 4 or more screens	1 space per 3 seats 1 space per 3.3 seats	1 space per 3 seats 1 space per 3.3 seats
Visitor accommodations	1 space per *guest room*	1 space per *guest room*
Conference room	10.0	10.0
Multiple dwelling units	(see Section 142.0525)	

Footnote for Table 142-05H

(1) *Transit Area*. The *transit area* peak parking demand applies in the *Transit Area* Overlay Zone (see Chapter 13, Article 2, Division 10).

(d) Hourly Accumulation Rates. Table 142-05I contains, for each hour of the day shown in the left column, the percentage of peak demand for each of the uses, separated in some cases into weekdays and Saturdays.

§ 142.0545

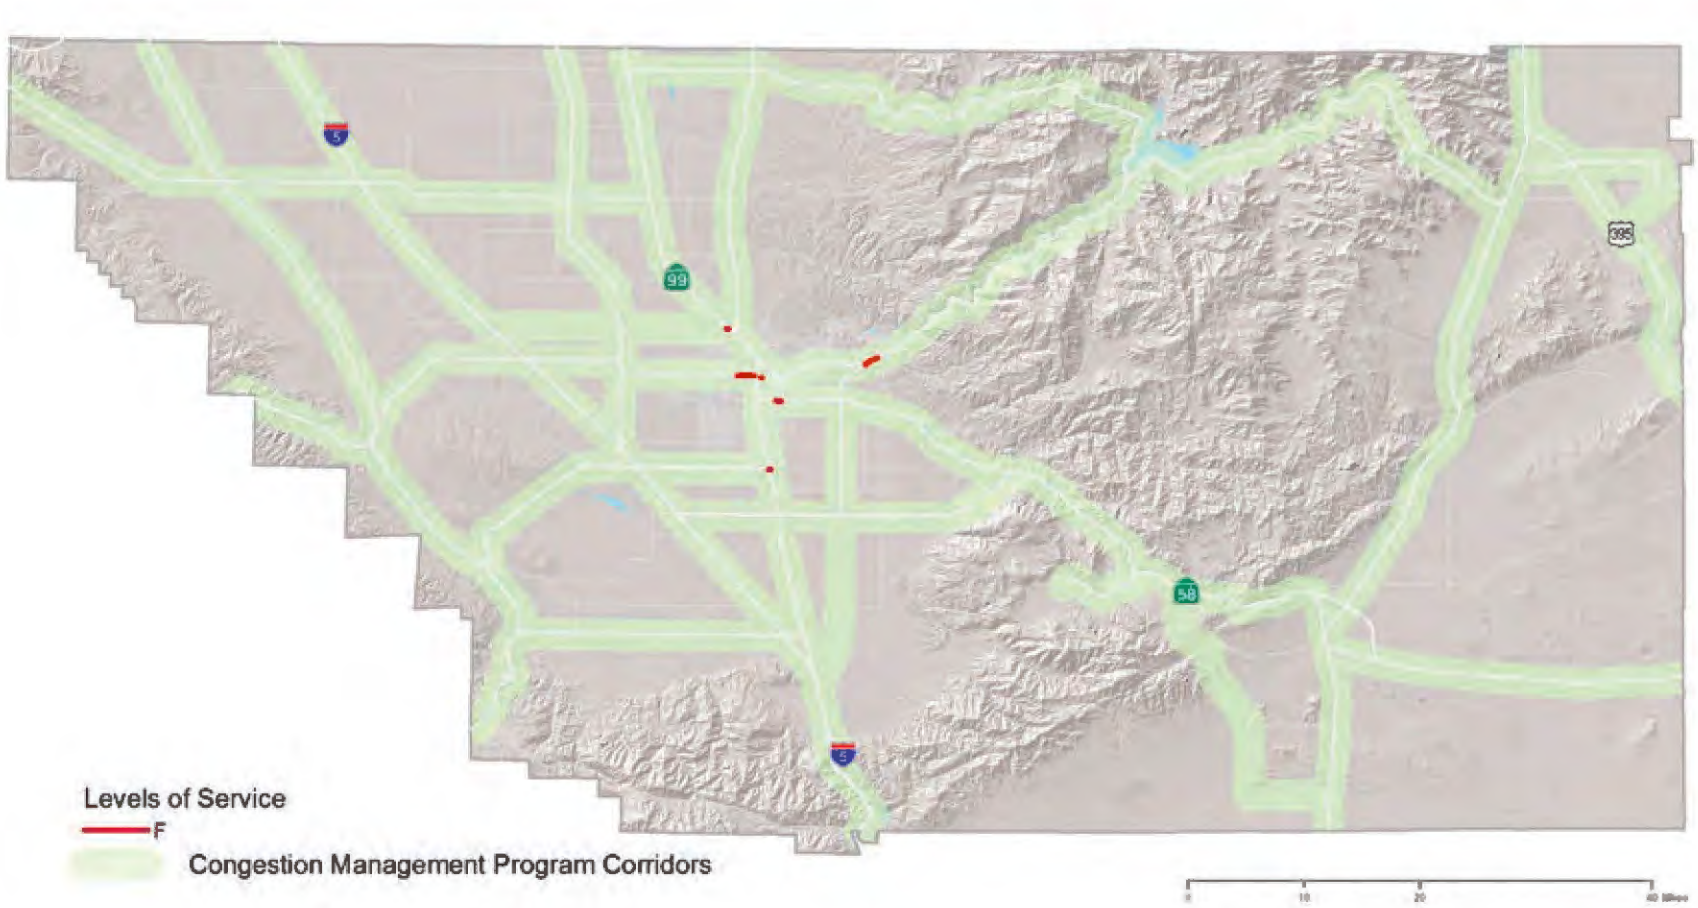
FIGURE 5-10: KERN COUNTY CONGESTION MANAGEMENT PROGRAM CORRIDORS



Level of Service Standards

The purpose of this section is to establish level of service standards for the Congestion Management road network in Kern County. California Government Code Section 65089(b)(1)(B) requires that level of service standards be established at no worse than LOS E, or LOS F if that is the current level of service.

Level of service, according to the Transportation and Traffic Engineering Handbook, is a "qualitative measure that represents the collective factors of speed, travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience, and operating costs provided by a highway facility under a particular volume condition." Level of service is ranked from A to F, with A being best and F being worst (see Table 5-6).

TABLE 5-6: LEVELS OF SERVICE

Level of Service A	Free flow: no approach phase is fully used by traffic and no vehicle waits longer than one red indication. Insignificant delays.
Level of Service B	Stable operation: an occasional approach phase is fully used. Many drivers begin to feel somewhat restricted within platoons of vehicles. Minimal delays.
Level of Service C	Stable operation: major approach phase may become fully used and most drivers feel somewhat restricted. Acceptable delays.
Level of Service D	Approaching unstable: drivers may have to wait through more than one red signal cycle. Queues develop but dissipate without excessive delays.
Level of Service E	Unstable operation: volumes at or near capacity. Vehicles may wait through several signal cycles and long queues form upstream from intersection. Significant delays.
Level of Service F	Forced flow: represents jammed conditions. Intersection operates below capacity with several delays that may block upstream intersections.

Jurisdictions are encouraged to incorporate multimodal level of service standards as appropriate for each community facility type, place type and corridor type as recommended in the latest Highway Capacity Manual update. The 2012 update to the project selection criteria includes consideration of highway, bike and pedestrian level of service. To refer to the Kern COG Project Delivery Policies and Procedures please use the followinglink: www.kerncog.org/images/docs/policies/Project_Selection_Process_2012.pdf

Adopted Level of Service Standards

One of the most important elements of the congestion management process is to establish traffic level of service standards to decide how much traffic, during peak hours, is acceptable. LOS is a way of measuring the amount of traffic congestion.

Level of service E has been established as the minimum system-wide LOS traffic standard in the Kern COG Congestion Management Plan. Those roads currently experiencing worse traffic congestion have been accepted at their existing traffic level of LOS F. By so doing, cities and the County will not be penalized through loss of gas tax funds for not meeting the new CMP LOS E standard. Existing LOS F locations are listed below.

- Seventh Standard Road – SR 99 to Coffee Road
- Portions of SR 119 at SR 99

- Portions of SR 178/24th Street – Oak Street to N Street
- Portions of SR 58 – SR 99 to Cottonwood Road
- Portions of SR 58/Rosedale Highway – SR 99 to Fruitvale Ave

(List updated based on most recent travel demand model validation base year)

Projects along one of the existing LOS F segments, with 1 or more peak-hour trips (or as required by the most recent Caltrans Guide for the Preparation of Traffic Impact Studies), shall include a deficiency plan for the affected corridor segments as part of the traffic study for the project's environmental document or as a separate stand-alone deficiency plan for the affected corridor.

Overall, the number of congested segments and vehicle miles traveled has dropped since the last travel demand model validation. Of the segments that remain LOS F, a stand-alone Corridor System Management Plan (CSMP)/deficiency plan has been completed for SR 58. Also note that 7th Standard Road LOS F segment received capacity improvements in 2011 and is not included in the most recent transportation model base year validation from 2008. The CMP assumes that recently completed capacity increasing improvements will operate better than LOS F until the next transportation model update indicates that the segment has been degraded to LOS F again. The model update validation uses observed traffic data from the annual traffic monitoring program. A CSMP or Transportation Concept Report (TCR) has not been completed for the congested portions of SR178 and SR119. These routes are under the grace period for requirement of a deficiency plan and have capacity improvements already planned in this RTP. All other deficiencies are off the CMP network.

In addition to the LOS standards of the CMP, some cities and the County of Kern have adopted policies to help maintain their own LOS standards. In most cases, these local policies are aimed at maintaining LOS C. These standards are not intended to replace local policies by allowing greater congestion; they serve a very different purpose. The locally adopted LOS standards are tied to the cities' and County's authority to approve or deny development, require mitigation measures, and construct roadway improvements. The level of service standard is a planning tool to be used in the development review process. Failure to meet the local standard does not have direct negative federal financial impacts.

Mitigating Deficiencies

The Deficiency Plan is similar to a CSMP or TCR. The deficiency plan section of the traffic study should analyze affected portion of the CMP network and parallel corridors as appropriate. A grace period is being provided until Kern COG and/or Caltrans completes the CSMP or TCR for all the congested segments in the Congestion Management network.

- Multimodal Analysis – The modes analyzed should be dependent on the place type. For example, in most cases rural intercity travel need not look at pedestrian facilities. The plan should provide mitigation and a monitoring program to offset impacts to all modes through incident and demand management strategies.

- Corridor Analysis – Corridor impacts to a mode may be mitigated by providing capacity on a parallel facility. For example, an impacted facility may lack pedestrian and bike facilities; however, a parallel bike/pedestrian path within the corridor could offset this deficiency. In addition, impacts to transit buses stuck in the same traffic congestion as single-occupant vehicles could be mitigated by the provision of a transit/HOV lane in the congested travel direction during peak periods. Additional mitigation for congestion could be through the provision of a freeway service patrol to rapidly clear traffic accidents during peak periods.

- Multimodal Circulation Plans – As required by AB 1358 effective January 2011, at the next regularly scheduled update, local circulation plans should consider other modes and methods for assessing service. In addition to the road network, circulation plans should include bike, pedestrian, and transit networks. The bike/pedestrian/transit networks should provide for transit-oriented development centers that could serve as transfer points and nodes for future express and/or regional service. The centers also should provide a connected network linking to future high-speed rail and passenger rail stations. These centers should be reflected in the Land Use Element of the General Plan with higher densities and a mix of land uses that make for a vibrant pedestrian-oriented destination.

- Funding Mitigation – Funding for mitigation may be phased as part of the mitigation monitoring program. Developer-funded mitigation would be timed with the completion of phases that created the impacts. Other funding sources could include local and regional traffic impact fees, a transportation sales tax measure, and the Kern Motorist Aid Authority DMV fee for freeway service patrols and traveler assistance 511 services. A Corridor System Management Plan could be prepared by Kern COG to assist with the development of the cost/benefit analysis.

- Congestion Pricing – On major freeway and highway facilities, HOV lanes, bus lanes, and toll lanes can be used to fund new capacity for single-occupant vehicle traffic. At the national level, odometer-based tolling is being considered to fund and maintain infrastructure that supports goods movement activity. Variable parking costs can also be used as a strategy to reduce congestion during peak periods.

- Grace Period – Member agencies are not required to prepare a deficiency plan or traffic study as required under this section until Kern COG or Caltrans completes the Corridor System Management Plan or Transportation Concept Report for the deficient segments on the CMP system.

Congestion Management Agency Role

Under the State CEQA Guidelines, the Congestion Management Agency monitors a countywide level of service standard and withholds federal gas tax funds if the standard is not met or mitigated. Local agencies often establish more stringent level of service requirements as part of the circulation plans. The CMP standard is not viewed as being in conflict with locally adopted LOS standards that are more stringent.

It is the Congestion Management Agency's responsibility to ensure that all cities and the County are following the CMP. Of particular importance is the establishment of traffic counts and regional traffic modeling. Kern COG completes one coordinated and comprehensive review of current LOS traffic data with each RTP update; each city and the County is evaluated in the same manner. Through the Kern Regional Traffic Count Program, the cities, County and Caltrans undertake traffic counts on their roads annually. Use of recent peak-hour traffic counts as a basis for traffic forecasting eliminates much of the "guesswork" and ensures that the review is based on actual traffic conditions.

Provisions include:

- All roadway segments on the Congestion Management network shall maintain a level of service of E or better.

- Any roadway segments on the Congestion Management network that are operating at a level of service worse than E on the adoption of the first CMP shall be required to prepare a deficiency plan as part of the traffic study for a proposed development. The plan shall provide mitigation through transportation system management and travel demand management strategies and/or capacity for other modes such as transit and HOV that is not affected by the slower speeds of congested single-occupant vehicle

HCS7 Freeway Merge Report

Project Information

Analyst	RE	Date	4/24/2019
Agency	Caltrans	Analysis Year	2019
Jurisdiction	Kern County – SR 166 to SB SR 99 Merge	Time Period Analyzed	Near-Term Weekday AM
Project Description	Tejon Casino	Unit	United States Customary

Geometric Data

	Freeway	Ramp
Number of Lanes (N), ln	3	1
Free-Flow Speed (FFS), mi/h	75.4	35.0
Segment Length (L) / Acceleration Length (LA),ft	1500	800
Terrain Type	Level	Level
Percent Grade, %	-	-
Segment Type / Ramp Side	Freeway	Right

Adjustment Factors

Driver Population	Balanced Mix	Balanced Mix
Weather Type	Non-Severe Weather	Non-Severe Weather
Incident Type	No Incident	-
Final Speed Adjustment Factor (SAF)	0.950	0.950
Final Capacity Adjustment Factor (CAF)	0.939	0.939
Demand Adjustment Factor (DAF)	1.000	1.000

Demand and Capacity

Demand Volume (Vi)	2970	220
Peak Hour Factor (PHF)	0.94	0.94
Total Trucks, %	25.00	10.00
Single-Unit Trucks (SUT), %	-	-
Tractor-Trailers (TT), %	-	-
Heavy Vehicle Adjustment Factor (fHV)	0.800	0.909
Flow Rate (vi),pc/h	3949	257
Capacity (c), pc/h	6761	1878
Volume-to-Capacity Ratio (v/c)	0.62	0.14

Speed and Density

Upstream Equilibrium Distance (LEQ), ft	589.3	Number of Outer Lanes on Freeway (NO)	1
Distance to Upstream Ramp (LUP), ft	1780	Speed Index (MS)	0.322
Downstream Equilibrium Distance (LEQ), ft	-	Flow Outer Lanes (vOA), pc/h/ln	1580
Distance to Downstream Ramp (LDOWN), ft	-	On-Ramp Influence Area Speed (SR), mi/h	62.1
Prop. Freeway Vehicles in Lane 1 and 2 (PFM)	0.600	Outer Lanes Freeway Speed (SO), mi/h	67.7
Flow in Lanes 1 and 2 (v12), pc/h	2369	Ramp Junction Speed (S), mi/h	64.1

Level of Service (LOS)	E	Density in Ramp Influence Area (DR), pc/mi/ln	39.4

HCS7 Freeway Diverge Report

Project Information

Analyst	RE	Date	4/24/2019
Agency	Caltrans	Analysis Year	2019
Jurisdiction	Kern County – NB I-5 to SR 166 Diverge	Time Period Analyzed	Ex + P Alt B P1 Weekend PM
Project Description	Tejon Casino	Unit	United States Customary

Geometric Data

	Freeway	Ramp
Number of Lanes (N), ln	2	1
Free-Flow Speed (FFS), mi/h	75.4	35.0
Segment Length (L) / Deceleration Length (LA),ft	1500	400
Terrain Type	Level	Level
Percent Grade, %	-	-
Segment Type / Ramp Side	Freeway	Right

Adjustment Factors

	Freeway	Ramp
Driver Population	Balanced Mix	Balanced Mix
Weather Type	Non-Severe Weather	Non-Severe Weather
Incident Type	No Incident	-
Final Speed Adjustment Factor (SAF)	0.950	0.950
Final Capacity Adjustment Factor (CAF)	0.939	0.939
Demand Adjustment Factor (DAF)	1.000	1.000

Demand and Capacity

	Freeway	Ramp
Demand Volume (Vi)	3989	114
Peak Hour Factor (PHF)	0.94	0.94
Total Trucks, %	23.76	10.00
Single-Unit Trucks (SUT), %	-	-
Tractor-Trailers (TT), %	-	-
Heavy Vehicle Adjustment Factor (fHV)	0.808	0.909
Flow Rate (vi),pc/h	5252	133
Capacity (c), pc/h	4507	1878
Volume-to-Capacity Ratio (v/c)	1.17	0.07

Speed and Density

Upstream Equilibrium Distance (LEQ), ft	0.0	Number of Outer Lanes on Freeway (NO)	0
Distance to Upstream Ramp (LUP), ft	-	Speed Index (DS)	-
Downstream Equilibrium Distance (LEQ), ft	0.0	Flow Outer Lanes (vOA), pc/h/ln	-
Distance to Downstream Ramp (LDOWN), ft	-	Off-Ramp Influence Area Speed (SR), mi/h	57.9
Prop. Freeway Vehicles in Lane 1 and 2 (PFD)	1.000	Outer Lanes Freeway Speed (SO), mi/h	-
Flow in Lanes 1 and 2 (v12), pc/h	5252	Ramp Junction Speed (S), mi/h	-
Flow Entering Ramp-Infl. Area (vR12), pc/h	5252	Average Density (D), pc/mi/ln	-
Level of Service (LOS)	F	Density in Ramp Influence Area (DR), pc/mi/ln	45.8

CHAPTER 1

INTRODUCTION

The Tejon Casino project proposes a casino building, restaurants, and hotel at two alternative sites in the County of Kern, California. The proposed project alternative sites are currently utilized for agriculture in the southwest portion of Kern County. Only one of the alternative sites will ultimately be developed as the project. The Mettler site (Alternative A1 or A2) is located along Valpredo Avenue approximately 500 feet to the west of CA 99, and the Maricopa site (Alternative B) is located along Maricopa Highway (CA 166) immediately to the west of Interstate 5. Figure 1-1 provides a vicinity map for the Mettler site and Figure 1-2 provides a vicinity map for the Maricopa site. Figure 1-3 provides a preliminary site plan for the Mettler preferred site, Figure 1-4 provides a preliminary site plan for the Mettler reduced site, and Figure 1-5 provides a preliminary site plan for the Maricopa site.

Purpose

The purpose of this report is to evaluate the ability of the existing water and sewer systems and infrastructure (if any) to accommodate this development and to identify what water and sewer improvements are necessary to support the development of the proposed project. The information presented in this report is intended to support the environmental document being prepared for this development proposal. Water and sewer system requirements are outlined as preliminary concepts in order to capture the overall facilities and physical space needed to provide service to the proposed project alternatives. Once a project alternative is selected, more detailed preliminary design studies will be needed to define the actual facility and space needs of the water and sewer infrastructure to serve the proposed development project.

Mettler (Alternative A1), Mettler Reduced (Alternative A2), or Maricopa Site (Alternative B)

This report is based on the proposed Tejon Casino and associated development project which will be constructed at one of two possible sites with the following basic components:

- Casino
- Restaurants and Retail
- Hotel
- Meeting Rooms
- Pool and Spa/Fitness
- Back of House Space
- Recreational Vehicle Park and General Parking
- Fire/Sheriff Station
- Organic Farm (Future)
- Residential Community (Future)
- Community Park (Future)
- Community/Tribal Area (Future)

CHAPTER 2

WATER SYSTEM

This chapter summarizes the pertinent planning criteria, projected water demands, and existing and proposed water facilities associated with providing water service to the proposed casino project.

Planning Criteria

Based on a review of data from other casinos and relevant projects utilizing groundwater in Kern County, the pertinent planning criteria used to evaluate existing and proposed water facilities are summarized as follows:

- Average casino building water use – 360 gpd/1,000 SF [1]
- Restaurant average water use – 360 gpd/1,000 SF [1]
- Hotel average water use – 120 gpd/room [1]
- Recreational vehicle park – 90 gpd/vehicle [19]
- Fire/Sheriff station – 3,238 gpd/acre [2]
- Community center water use – 96 gpd/1,000 SF [1]
- Residential water use– 648 gpd/unit [2]
- Parks water use – 1,295 gpd/acre [2]
- Irrigation water use – 2,000 gpd/acre [3]
- Agricultural water use – 2,000 gpd/acre [3]
- Fire flow – 2,500 gpm [2]
- Maximum day demand peaking factor – 1.8 [2]
- Peak hour demand peaking factor – 3.6 [2]

Projected and Existing Water Demands

Based on the above planning criteria and proposed land use plan, Table 2-1, Table 2-2, and Table 2-3 summarize the projected water demands for each alternative of the project. In addition to the building and facility water use, potential future development is also proposed at each alternative. The proposed potential future development would include a small farm, residential community, and community area.

The total projected water demand of 346,779 gpd equates to 388 acre-feet per year for Alternative A1 (Mettler), the total projected water demand of 331,768 gpd equates to 372 acre-feet per year for Alternative A2 (Mettler Reduced), and the total projected water demand of 215,410 gpd equates to 241 acre-feet per year for Alternative B (Maricopa).

TABLE 2-1
TEJON CASINO (ALTERNATIVE A1 - METTLER SITE)
ESTIMATED WATER DEMAND

Land Use	Quantity	Demand Factor	Demand
Casino Only			
Casino	166,500 SF	360 gpd/1,000 SF	59,940 gpd
Restaurants	73,300 SF	360 gpd/1,000 SF	26,388 gpd
Hotel	400 rooms	120 gpd/room	48,000 gpd
RV Park (10 spaces/acre)	22 Acres	90 gpd/vehicle	19,800 gpd
Fire/Sheriff Station	10,000 SF	3,238 gpd/acre	744 gpd
Subtotal (Average)			**154,872 gpd**
Subtotal (Max Day)			**278,870 gpd**
Subtotal (Peak Hour)			**557,539 gpd**
Potential Future Development			
Organic Farm	40 acres	2,000 gpd/acre	80,000 gpd
Residential Community	92 homes	648 gpd/unit	59,616 gpd
Community Park	29 acres	1,295 gpd/acre	37,555 gpd
Community/Tribal Area	153,500 SF	96 gpd/1,000 SF	14,736 gpd
Subtotal (Average)			**191,907 gpd**
Subtotal (Max Day)			**345,433 gpd**
Subtotal (Peak Hour)			**690,865 gpd**
TOTAL (Average)			**346,779 gpd**
TOTAL (Max Day)			**624,202 gpd**
TOTAL (Peak Hour)			**1,248,404 gpd**

Irrigation demand for the landscaped areas surrounding the casino, restaurant, and hotel is incorporated already in the water demand design criteria for the various land uses and is projected to be 15 percent of the overall water demand for each land use. This is based on a conservative estimate of an equal ratio of landscaped area to finished floor area within the casino, restaurant, hotel, RV Park, and fire/sheriff station. This equates to an irrigation demand of 23,231 gpd for Alternative A1, 16,511 gpd for Alternative A2, and 20,936 gpd for Alternative B.

Both sites are currently utilized as agriculture; the current land use will be replaced with the proposed project land uses as identified generally in Chapter 1 and more specifically in Tables 2-1, 2-2, and 2-3. Below, Table 2-4, Table 2-5, and Table 2-6 present the water demand based on existing use on the sites as well as projected water demand for the proposed use of the sites and the estimated net change in average daily water use.

Existing Water Facilities

There are two water purveyors in the area of the alternative project sites. The Mettler site is in the Arvin-Edison Water Storage District (AEWSD) service area, and the Maricopa site is in the Wheeler Ridge Maricopa Water Storage District (WRMWSD). These Districts provide raw water service to a portion of the County of Kern [4]. Agricultural water demand is supplied by a combination of raw surface water from the Central Valley Project (CVP), other surface water exchanges with other agencies, and District groundwater [4].

Within these Districts, potable water is supplied solely by means of private groundwater wells. Therefore, the proposed Tejon Casino project will use groundwater as its source of supply. There currently are no groundwater wells at either alternative site [5].

The following sections describe the existing water facilities in more detail and Figure 2-1 graphically shows the existing water facilities in the vicinity of the alternative project sites including existing groundwater wells [5].

Presently both alternative sites are under surface water contracts with their Districts [6]. This enables the properties to obtain the water necessary to sustain the agricultural use of the land. Once a non-agricultural project is developed, surface water would no longer be delivered to that site. Instead of securing surface water for agricultural use, the property would extract groundwater for potable water service to the development project.

The impact to adjacent municipal groundwater production wells in MCWD is anticipated to be minimal. The existing MCWD groundwater wells are approximately 3,000 feet away from the proposed well sites at the Mettler alternative(s) and the MCWD well depths are in excess of 700 feet. The existing groundwater well(s) in the vicinity of the Maricopa site are over 3,000 feet away from the proposed Maricopa well sites. With current groundwater level at a maximum depth of approximately 400 feet, the effect of new groundwater wells for the proposed project on the existing wells near both the Mettler and Maricopa sites will be insignificant [4] [7].

Local Water Supply and History. AEWSA was organized in 1942 under California Water Storage District law and currently serves approximately 132,000 acres of land (113,000 irrigated acres) [8]. In 1962, the District entered into a water supply contract with the United States Bureau of Reclamation (USBR) to supply water for the District's project from the Friant-Kern System of the CVP [8]. The water supply contract provides for the annual delivery of 40,000 acre-feet of Class 1 (firm) water and up to 311,675 acre-feet of Class 2 (non-firm) water [8]. This contract was renewed in 2001 through 2026, with provisions for renewal after that [8].

During the period 1964 through 1968, the District's water distribution facilities were constructed [8]. Prior to the construction and operation of the District's water distribution facilities, groundwater overdraft was estimated at 126,000 acre-feet per year [8]. This resulted in the continual lowering of groundwater levels, until pumping lifts exceeded 600 feet in many areas of the District [8]. Because of this, the District's distribution system has incorporated recharge basins and District-owned deep injection wells to capture and store wet-period water underground for later recovery and use during dry periods.

As a result of the District's water management operations, groundwater levels in the District no longer have a downward trend, but have stabilized [9]. The District has also experienced a substantial reduction in subsurface inflow from neighboring areas and a significant improvement in both groundwater depths and groundwater quality for the water users in the District who continue to rely on groundwater [9].

Most recent yearly data show the District had received a total of approximately 235,000 acre-feet of water. A total of 144,000 acre-feet were imported through the CVP and 91,000 acre-feet were transferred through other agencies such that less than 1,000 acre-feet were utilized from District groundwater supply.

The MCWD is a small municipal water district located adjacent to Alternatives A1 and A2 (Mettler). However, MCWD does not have sufficient capacity or facilities to serve the project. Currently the Mettler County Water District only serves a population of 157 people using two active groundwater wells. These wells are approximately 900 feet deep with screening intervals from 730 to 870 feet deep according to DDW and the GAMA groundwater database [5] [10].

Regional Water Supply. On a more regional level, the District participates in numerous water transfers and exchanges and, in a typical year, will participate in water transfers and exchanges with 15 to 20 other agencies in various locations throughout the State [8]. The District's position, and its interconnections to major Federal, State, and local water conveyance facilities, gives the District an ability to facilitate these transfers and exchanges.

Storage and Distribution. The District's backbone facility is a 45-mile canal system that extends from around the urbanized area of Bakersfield and throughout the District [11]. The canal has a capacity of 1,000 cubic feet per second {11}. This rate of flow accommodates maximum water deliveries as provided in the District's original Federal water service contract [11]. This distribution system is sufficient to serve all agricultural/irrigation connections. There are no connections for service to urban populations within the District [3]. All urban water use within the District boundary is through private facility extraction and distribution of groundwater.

Proposed Water Facilities

To accommodate the proposed casino and hotel project, an evaluation of the water supply and distribution system is necessary. Prior to discussing these items, a comparison of water demand projections is provided.

Water Use Comparison. Since the properties for the proposed project sites are within the AEWSD District boundary, the agricultural water use for these properties has been taken into consideration when AEWSD does regional planning for water supply infrastructure necessary to support long term water use in the area. To ensure that the currently proposed project is not anticipated to use considerable additional water compared to its agricultural water use allocation, a comparison between the current water use and the proposed Tejon Casino project water use is necessary.

Based on the summaries provided in Table 2-1, Table 2-2, and Table 2-3, the proposed Tejon Casino project is estimated to have a water use of either 346,779 gpd, 331,768 gpd, or 215,410 gpd at full build out. The conceptual land use plan for the project includes large areas of parking and other open spaces such that water will not be required on a considerable portion of the site. The total gross acreage of the Mettler site is 303 acres and the total gross acreage of the Maricopa site is 117 acres.

Currently both sites are used as agriculture (primarily grapes, potatoes, oranges, wheat, carrots, and almonds) [12]. Utilizing the delivered water quantity and irrigated acres within the District, a factor of 2,000 gpd/acre is calculated to estimate existing water use on an acreage basis [3]. Using this factor, the existing and proposed total estimated water use for the project site alternatives are presented in Table 2-4, Table 2-5, and Table 2-6.

Based on Table 2-4, Table 2-5, and Table 2-6, the proposed Tejon Casino project at the Mettler site is anticipated to have a 43 percent decrease in water use, the Mettler reduced site is anticipated to have a 45 percent decrease in water use, and the Maricopa site is anticipated to have an eight percent decrease in water use compared to current agricultural uses.

Proposed Water System. As noted earlier, surface water imported into the area of the proposed Tejon Casino alternative sites can only be used for agricultural purposes. Therefore, the source of potable water for the proposed Tejon Casino development at either site will be groundwater. This will require the construction of onsite groundwater wells; the wells will need to be sized to supply the build-out water demand for the proposed development project. Proposed water facilities are presented on Figure 2-2, Figure 2-3, and Figure 2-4.

Groundwater Wells. Either of the two potential project sites lie within the southeastern portion of the Kern County Subbasin of the San Joaquin Valley Basin. The size of the subbasin is calculated to be 205 square miles with a usable capacity of 5.5 million acre-feet and safe yield of 228,000 acre-feet per year [13]. Historical yields from previous wells range from approximately 622 gpm to 1,786 gpm, and averaged 1,191 gpm [14]. At this groundwater pumping yield rate, build-out water demands can be satisfied for either development site alternative. The size of the well and the depth of the well will be determined based on the ultimate water demands needed for the selected development site.

Well size is measured by casing diameter and well pump horsepower. Generally, casing diameter determines the maximum yield rate of a well, and the well pump horsepower is determined using the maximum yield rate and the depth of the well. The project would drill and install two wells onsite to ensure a redundant water supply is maintained in case of well failure. The well depth(s) are expected be approximately 600 to 800 feet based on a preliminary review of groundwater conditions in the project area. Preliminary groundwater well locations for each site alternative are shown on Figure 2-2, Figure 2-3, and Figure 2-4.

Groundwater Treatment. Groundwater quality in the Central Valley aquifer has varied historically depending on drought conditions. Primarily salts and nitrate constituents have fluctuated the most and at times have exceeded acceptable drinking water limits of 500 mg/L and 10 mg/L respectively. The proposed Tejon Casino project will need to sample groundwater at the selected development site to assess what treatment measures will be required.

There are two standard groundwater treatment systems which will be used at the proposed Tejon Casino site. First is groundwater filtration. Its purpose will be to remove particulates from the pumped groundwater. The second will be disinfection. Its purpose will be to provide assurance that the potable water distributed within the project site will maintain a disinfection residual to meet drinking water standards. The disinfection residual will protect public health.

In addition to filtration, project planning should anticipate the need for a reverse osmosis treatment system for the purpose of removing excess constituents from the groundwater. The level of treatment will depend upon the quality of the groundwater and is expected to vary from year to year. It is likely that in most years no reverse osmosis treatment will be needed. In other years only a portion of the total water used will need to be treated to supply water quality meeting the drinking water standards. Most recent groundwater quality data from MCWD, which is adjacent to the Mettler site, show TDS levels safely below drinking water standards (<500 mg/L).

In general, the reverse osmosis treatment process will be minimized in order to reduce operational costs. Thus, only non-irrigated demands are anticipated to be treated with reverse osmosis. A by-product of reverse osmosis will be waste brine; this will have to be trucked offsite and disposed of in an approved landfill or by other means available such as through evaporation. Truck disposal would occur at an existing brine waste facility in the South Bay area of Los Angeles. A typical truck for liquid waste hauling has a 3,000-gallon capacity.

Brine disposal in periods of reverse osmosis treatment utilization is estimated to be based on a necessary diversion of groundwater to achieve 500 mg/L TDS. Groundwater quality measurements historically have reached a maximum concentration of approximately 650 mg/L [15] [16]. Table 2-7 presents the maximum brine disposal estimation for the proposed Tejon Casino project by alternative.

TABLE 2-7
TEJON CASINO ESTIMATED MAXIMUM BRINE DISPOSAL

Alternative	Average Potable Water Demand[1]	Assumed TDS (Worst Case)	Percent of Groundwater Treated	Brine Percentage of Groundwater Treated[2]	Total Brine Generation
A1	229,224 gpd	625 mg/L	25%	1%	2,751 gpd
A2	184,428 gpd	625 mg/L	25%	1%	2,213 gpd
B	152,172 gpd	625 mg/L	25%	1%	1,826 gpd

1 Includes Casino demands, Future Residential demands, and Future Community/Tribal Area demands.
2 Assumes a two-pass system at 80% recovery.

Potable Water Storage and Distribution. Either development site will have a total of two groundwater wells with a single groundwater well operating that will supply the potable water needs for the entire site. To accomplish this, there will need to be a potable water distribution piping system within the site. In addition, there will be a non-potable distribution system for the irrigation demands within the site. Also, fire flow supply to the onsite fire hydrants is intended to be supplied from the non-potable system. Groundwater for non-potable uses will not need to be treated; this will reduce treatment costs. It is anticipated that the potable distribution system onsite will consist of 4-inch diameter and 6-inch diameter piping looped around the site and the non-potable distribution system will consist of 6-inch diameter and 8-inch diameter piping looped around the site.

The non-potable system will operate at a lower pressure than the potable system further saving pumping costs. Both systems will be supplied from an onsite storage tank which will be filled with groundwater using the well pump. A booster pump system will draw water from the storage tank and feed the two distribution systems. Water pumped into the potable water system will be treated, but water pumped into the non-potable water system will not be treated.

The onsite storage tank will be sized based on the well pump rate and the fire flow requirement. It is anticipated that the fire hydrant flow requirement will be larger than the well pump rate; thus, the storage tank will need to supply the majority of the fire flow requirement. For an expected fire flow of 2,500 gpm per typical commercial land use, the storage tank will need to hold about 300,000 gallons [2]. To this storage volume must be added operational storage which is typically about 25 percent of maximum day demand. This will increase the necessary storage to approximately 400,000 gallons. Tank size will need to be calculated more precisely once a project concept is selected and project design parameters are known.

Water System Facilities Summary. A summary of proposed water system components is provided below:

- Two groundwater wells to extract water from the underlying aquifer;
- Continuous water quality monitoring of yielded groundwater;
- Disinfection system to meet drinking water requirements for potable water uses;
- Groundwater filtration for potable water uses;
- Reverse osmosis water treatment capability during years when water quality does not meet drinking water standards;
- Brine disposal from reverse osmosis treatment;
- Onsite groundwater storage to meet potable demand, irrigation demand, and fire flow demand;
- Potable and non-potable distribution systems to deliver water throughout the site;
- Water booster pump system to pressurize the potable and non-potable systems from the groundwater storage tank;
- Emergency power generator to maintain system operation during a power outage.

Water Facilities Space Requirements. The largest water system facility will be the groundwater storage tank. The ideal configuration will be to have the groundwater well, the storage tank, the booster pumps, and the groundwater treatment systems all within one secured area of the project. The estimated area that will be needed is approximately 12,000 square feet based on the needed equipment stated above.

The booster pumps and treatment systems should be installed inside a building for weather protection as well as noise attenuation. The tank will be the tallest of these facilities topping out at around 20 feet in height.

Sizing of Water System by Alternative

Depending on the proposed project alternative chosen, the sizing of the proposed water facilities explained in this chapter will vary. Alternative A1 and Alternative A2 would have similar capacities for each water system component while Alternative B would have smaller water system components comparatively. The average water demand of Alternative B is approximately two thirds of the water demand for either Alternative A1 or Alternative A2; thus, most water system components in Alternative B would be scaled down. The exception would be water storage, specifically fire storage. The fire flow requirement would remain identical regardless of alternative; hence, the water storage tank capacity would lessen only in relation to the decrease in domestic water demand.

Tejon Casino Water Facilities Impact

Table 2-4, Table 2-5, and Table 2-6 show that development of either alternative will result in a net reduction in water use thus aiding in recovery of the existing groundwater aquifer. The surface water allotment that was previously used at the project site(s) will be incorporated into the existing groundwater banking program. This quantity of water, which is greater than the average water demand of either project alternative, will aid in the recharge of the groundwater aquifer in which the project is located thus improving groundwater levels overall.

Additional measures could include, but not be limited to, the utilization of recycled water to further reduce average water demand. Recycled water could be used for irrigation of the farm and park areas which account for approximately 30 percent of the overall water demand for any project alternative.

With regard to required water facilities, all necessary water facilities for each of the three alternatives will be located entirely within each project site. There are no existing water facilities in the vicinity of the proposed project sites which can be utilized for water service to the project sites. Therefore, there are no offsite facility improvements contemplated for any of the three alternatives. Each alternative will be required to construct all necessary groundwater extraction, treatment, and distribution facilities on the property.

All treatment plant components and processes will be protected from the floodplain by means of a flood control levee. Initial findings on potential flood threats in the project vicinity would merit a levee between 2 to 4 feet high to protect from the anticipated 100-year flood water levels.

CHAPTER 3

SEWER COLLECTION, TREATMENT, AND DISPOSAL SYSTEM

This chapter summarizes the pertinent planning criteria, projected sewer flows, proposed effluent disposal, and existing and proposed facilities associated with providing sewer service to the proposed Tejon Casino Project.

Planning Criteria

The pertinent planning criteria used to evaluate projected sewer flows for the proposed project come from a variety of sources and are summarized below.

- Average casino building sewer flow – 300 gpd/1,000 SF [17]
- Average hotel sewer flow – 100 gpd/room [17]
- Average restaurant sewer flow – 300 gpd/1,000 SF [17]
- Recreational Vehicle Park – 75 gpd/vehicle [19]
- Fire/Sheriff Station – 2,698 gpd/acre [18]
- Average community center sewer flow – 80 gpd/1,000 SF [17]
- Residential sewer flow – 301 gpd/unit [18]
- Design discharge peaking factor – 2.54 x (avg. discharge)$^{-0.1}$; in MGD [18]

Projected Sewer Flows

Projected sewer flows from the project were estimated based on the factors provided above. Table 3-1, Table 3-2, and Table 3-3 summarize the projected sewer flows by alternative for the Tejon Casino project. In addition to the building and facility wastewater generation, a potential future development is also proposed at each alternative. The proposed potential future development would include sewer flow from a residential community and community area. The total projected sewer flow requiring treatment and disposal is 169,031 gpd for Alternative A1 (Mettler), 131,701 gpd for Alternative A2 (Mettler reduced), and 123,224 gpd for Alternative B (Maricopa).

Existing Sewer Facilities

The proposed Tejon Casino alternative sites consist solely of agriculture uses with little or no sewer flow. Any current sewer flow at either site alternative would be treated onsite through small scale septic systems. There are no agencies or districts in the vicinity of the proposed project site(s) that offer sanitary sewer service. The nearest agency or district (Arvin Community Services District) providing sewer service is over ten miles away from either proposed project site.

Proposed Sewer Facilities

The proposed sewer system improvements necessary to accommodate the proposed casino project will include the construction of onsite gravity sewer collection lines, an onsite package wastewater treatment system, and an effluent disposal system. Proposed sewer facilities are presented on Figure 3-1, Figure 3-2, and Figure 3-3.

Gravity Sewers. Private onsite gravity sewer lines will be required to collect flows from the casino and associated facilities and to convey these flows to the proposed onsite treatment system. The site should be designed so that sewer will gravity flow from the entire project to the onsite treatment area. At the projected sewer flows calculated in Table 3-1, 3-2, and 3-3, the gravity sewer pipe sizes will range from 6-inch to 12-inch diameter for Alternative A1 and 6-inch to 10-inch for Alternative A2and Alternative B. The largest diameter pipe size will be needed for the influent line to the onsite treatment plant.

Wastewater Treatment Plant. The onsite gravity sewer collection system will flow into an onsite wastewater treatment system. This onsite wastewater treatment will be capable of a treatment level that is suitable for beneficial reuse of the treated effluent per EPA rules and regulations.

Depending on the exact package treatment plant selected there may be a need for additional tertiary (filtration) treatment. For example, a package membrane bioreactor would not require any additional treatment beyond disinfection to meet EPA standards whereas a package sequencing batch reactor (SBR) would require a supplemental filtration system to meet EPA tertiary requirements for reuse. Regardless of treatment methodology selected for the project, a preliminary summary of required equipment would be:

- Two submersible influent pumps (5 hp each);
- One primary screen for primary solids;
- Two aeration blowers for secondary treatment (15 hp each);
- Various minor process pumps, approximately six (<2 hp each);
- In-line disinfection system for tertiary effluent (Chlorine or Ultraviolet Radiation);
- Two effluent pumps for reuse/disposal (10 hp each);
- Adequate tankage for storage (one average day of irrigation water demand);
- Odor control;
- Emergency power generator.

Solids and sludge generated by the wastewater treatment plant would be hauled offsite for disposal. Primary solids would be collected and stored in an enclosure to be hauled away via regular trash service. Biological solids (sludge) would be stored for periodic disposal to an approved landfill. Sludge generation is estimated be approximately 100 to 150 gallons per day. This would equate to a single disposal truck trip every two weeks.

Reuse and Disposal. The wastewater generated onsite will be treated to acceptable reuse standards ("recycled water") according to EPA requirements. This will allow reuse for irrigation around the hotel and casino buildings and at other use areas such as the Community Park and Organic Farm.

For all alternatives of the proposed project, there will be excess recycled water available compared to the water demands of the Community Park and Organic Farm per Tables 2-1, 2-2, 2-3 and Tables 3-1, 3-2, and 3-3. Utilizing recycled water to its fullest extent would reduce average water use by approximately 132 AFY for Alternatives A1, 165 AFY for Alternative A2, and 71 AFY for Alternative B. Recycled water distribution piping would vary in size up to 4-inch diameter throughout the proposed use areas of the project.

All of the recycled water generated from the wastewater treatment facility would not be able to be utilized on a continuous basis. The projected sewer and subsequent recycled water generation will exceed the projected irrigation demand thus creating an excess amount of recycled water that would need to be disposed of during normal weather conditions as well as during periods of wet weather when there is no irrigation demand.

Percolation Pond. The means by which excess treated effluent can be disposed of is a percolation pond. This facility will hold excess treated effluent and allow it to infiltrate into the soil. Percolation of excess effluent can continue during rainfall and storm events throughout the wet weather season. The additional water from rainfall into the percolation pond will be accommodated within the percolation pond area by designing the percolation ponds with greater than one foot of minimum freeboard. The recommended freeboard for rainfall is 20 percent of the calculated depth of the percolation pond, or as determined by the design engineer.

Soil conditions at both alternative sites show infiltration rates to range from 0.57 to 1.98 inches per hour per the latest data from the USDA soil survey [18]. The minimum percolation rate allowed by the County is 1.0 inches per hour. Using that conservative percolation/infiltration factor, this would require a maximum percolation area of approximately 35,000 square feet at the peak sewer flow rate of the proposed Tejon Casino project alternatives. Percolation testing will be conducted at the ultimate selected project site to confirm the final required percolation pond size.

Permitting

No permitting will be necessary for the package wastewater treatment plant, recycled water distribution piping, recycled water use sites, and odor control system. Permitting through the federal Environmental Protection Agency (EPA) is required only for surface water discharges through the National Pollutant Discharge Elimination System. Surface water discharge is not an option for this project. Therefore, the design of all proposed wastewater treatment and disposal facilities, recycled water distribution systems, and odor control facilities will be self-certified by the registered professional engineer or engineers who will be responsible for the design.

Tejon Casino Sewer Facilities Impact

As with the potable water systems needed at each proposed project site, the wastewater systems needed to support the proposed development will have to be constructed entirely within the project boundary. There is no opportunity for any of the three alternatives to connect to an existing wastewater collection, treatment, and disposal system. Therefore, each project alternative will have to construct its own facilities to be fully capable of providing collection, treatment, and effluent disposal within its site boundary.

All treatment plant components and processes will be protected from the floodplain by means of a flood control levee. Initial findings on potential flood threats in the project vicinity would merit a levee between 2 to 4 feet high to protect from the anticipated 100-year flood water levels.
